

RAILINC | CIF Name Verification Matrix

There are several Transaction Types carriers submit to the Customer Identification File (CIF) that must be accompanied by supporting documentation as listed in the CIF Name Verification Matrix below. The Transaction Types are as follows: New Entity (NE), Name Change (NC), Name Correction (NX), DBA Sub-location Add (SA), and DBA Sub-location Change (SC). For an Out of Business (OB) request, it is mandatory that a user include in the SPI comment field the reason why they have requested the record to be expired (for example, phone disconnected or no longer in business at this location). If the carrier has spoken to someone regarding the closure of a location, the name of the person must be provided. This matrix lists different types of acceptable supporting documentation and assigns a weight (points) for each type of document.

To successfully submit a request for the above Transaction Types, the supporting documentation you provide must have a total weight of 10 points or greater. Any request that does not have sufficient supporting documentation will be rejected and sent back to the carrier.

The process of providing documentation for the above Transaction Types ensures that Railinc Product Support Specialists have accurate customer information. The CIF Name Verification Matrix is a “living document” that can be modified as the industry advances and new sources become available. The Customer Location Task Force (CLTF) maintains the document modification authority.

Documentation and Categories	Weight (Points)	Country*			Source		\$ (Cost)
		US	C	MX	Customer	Look-up
