Legal Disclaimer: Any actions taken in reliance on or pursuant to this document are subject to Railinc's Terms of Use, as set forth in <a href="https://public.railinc.com/terms-use">https://public.railinc.com/terms-use</a>, and all AAR rules.

### Introduction

The Umler Equipment Management Information System, the Equipment Register for North America, contains inspection dates required by AAR Interchange Rules for various rail car components, specific details on the internal and external dimensions, carrying capacities expressed in gallons/cubic feet capacity, equipment weight, as well as special equipment on all railcars and highway trailers and containers that are used in interchange equipment or commercial service. There are over 2 million equipment registrations in the Umler System.

The Umler System is managed by the Business Services Division at Railinc. All units registered in the Umler System are subject to an annual maintenance fee that is invoiced bi-annually. The Railinc Price List for this service as well as all Railinc services is available at <a href="https://public.railinc.com/support/railinc-price-list">https://public.railinc.com/support/railinc-price-list</a>.

### **Responsibility for Reporting Required Information**

- Each Stenciled Mark Owner is required to report all equipment: freight cars, maintenance of way, locomotives, telemetry devices, chassis, trailers, containers, tank containers, rail compatible intermodal equipment and bogies for rail-compatible intermodal equipment. The dimensional, capacity and/or codified information reported must accurately reflect the requirements as outlined in the Umler Data Specification Manual for each applicable data element.
- 2. To protect an owner's Umler registration, updates to information require access through Railinc's Single Sign-On application at <a href="https://public.railinc.com">https://public.railinc.com</a>. This precludes all unauthorized activity from being processed and updated to the file. Owners can contract to have an agent or agents report their data; however,
  - a. your company administrator grants Umler Rights to the agent(s) or,
  - b. the owner submits in writing, authorization to the Director, Umler Services, authorizing Railinc to provide access to the agent. Owners changing agents or assuming reporting responsibility should revoke Umler rights to the user or send a request on company letterhead to the Director, Umler Services, which will be provided within 24 hours to the owner or new agent.
- 3. It is the owner's responsibility to ensure that their mailing address, telephone and fax numbers and email address are kept up to date (see the <a href="FindUs.Rail">FindUs.Rail</a> industry contact database at <a href="https://public.railinc.com">https://public.railinc.com</a>). In addition, owners must immediately advise the Director, Umler Services, when reporting responsibility has been assigned to a new agent with the agent's mailing address, telephone and fax numbers, and email address. All corrections must be emailed to <a href="mailto:csc@railinc.com">csc@railinc.com</a>.

### The Uses of the Umler System

- 1. The Umler System is the industry's official source for accepting freight cars in interchange service in accordance with AAR Interchange Rules 90 and 93. Cars must be accurately registered in order to be included in the Car Hire Accounting Rate Master (CHARM®).
- 2. The Umler System is the official source for determination of the car's load limit and lightweight, Air Brake Test dates and cars eligible and/or certified for extended service of 50 years.
- 3. Numerous railroad operating officers utilize the file to determine car assignments, lengths, and weights to determine train makeup and line clearances. In addition, they can determine various special characteristics of cars to fulfill the shipper's car requirements.
- 4. Railroad traffic departments utilize the car's tare weight and capacity information in their automated billing systems.
- 5. Mechanical Departments schedule rail car maintenance based on inspection dates for various car components.
- 6. Railroad traffic departments bill Trailers and Containers based on outside length information.

**-2-** June 2025

- 7. Railinc verifies all interchange movements reported through the TRAIN II® system by validating the initial and number being reported. Also, the file is used to control the movement of overage equipment and cars not meeting FRA requirements and Mechanical Interchange rules that would restrict the interchange of a car.
- 8. The Umler System is the source of information for publishing the cars dimensional and capacity information in *The Official Railway Equipment Register*.

### **Purpose of the Umler Data Specification Manual:**

This manual specifies data requirements for the proper reporting of locomotives, maintenance-of-way passenger cars, End of Train information Systems, rail cars and highway trailers and containers. Umler is the master file from which the CHARM® (Car Hire Accounting Rate Master) file and TRAIN II® (Tele Rail Automated Information Network Phase 2, the railroad industry's national car information system) are verified before equipment is entered into these files.

### **Data Requirements**

This Specification Manual, divided into sections by equipment group, plus exhibits, outlining data input requirements, is the basis for Railinc's computer edit programs. Each equipment group and data element has corresponding permissible values, ranges, and business rules associated with the data. The Data Specification provides as much information as possible to assist users in entering these data elements.

### **Edits**

- 1. Umler data will be edited. Add and change records must be valid to be submitted to the Umler system. If equipment data on file is not valid, a conflict is generated on the equipment. The submitting party will have thirty (30) days to correct the record. Records that are not corrected within thirty (30) days will have zero rates and the Rate Indicator 0, P or Q inserted into the records per Car Hire Rule 1 and Freight Tariff 6007-Series. Add and change records that do not meet the minimum edit criteria will be rejected without processing. The fields that will cause transactions to be rejected are listed as Mandatory fields in this specification manual.
- 2. Cars having a Rate Indicator Code 0, P or Q for 90 days having conflicts are assigned pool number 9999016 and Transportation Codes XZ. Once a zero Rate Indicator Code 0, P or Q has been inserted into a record, the appropriate indicator must be resubmitted in addition to the corrected data field.
- 3. Owners of unique equipment that cannot pass standard edit requirements must email <a href="mailto:csc@railinc.com">csc@railinc.com</a> the information in advance of the equipment being placed into service. This equipment will be included in the Exception Control file which allows the unique information to pass the edit parameters, and the reported information is provided to the industry.

Some equipment data is mandatory in order to submit a valid equipment record. Optional fields can also be included but must contain valid data.

Notification of Errors: The notification of equipment conflicts is completed via tickler. Company administrators are responsible for updating recipient email information for tickler notifications.

### **Procedures for Identifying and Removing Equipment Having Canceled Reporting Marks:**

1. Upon receipt of notice from the owner, agent or the Surface Transportation Board (STB) that a company having equipment registered in the Umler System has or will cease operations, the AAR will serve notice to the owner/agent that the reporting mark will be canceled thirty (30) days after the cessation of operations and that the Transportation Code M will be inserted into the records. The owner/agent must delete all equipment from the Umler System within ninety (90) days after the cancellation of the reporting mark. When, after the ninety (90) days the owner/agent fails to delete the equipment and, there is no evidence of movement reported to the TRAIN II® system, the equipment can be deleted.

-**3** - June 2025

2. Upon receipt of notice from the owner/agent that their equipment has been sold and will be restenciled with a new reporting mark, Railinc will insert the Transportation Code M in the records. The owner/agent of the canceled reporting mark will be advised of the insertion of the M code. The owner/agent of the canceled reporting mark will have ninety (90) days, after the insertion of the code M, to delete the cars from the Umler System. When, after ninety (90) days, the owner/agent of the canceled reporting mark(s) has not deleted the equipment or has not requested in writing an extension or extensions having a maximum of thirty (30) days, or there is no evidence of movements reported to the TRAIN II® system, the equipment can be deleted.

### **Submission of Data**

Effective Date for Rates: For the purpose of receiving allowances, all data on newly acquired equipment and/or changes to equipment registered in the file which affects the valuation, age or Equipment Type Code (regardless of ownership), must be reported in the month prior to the first day of the month the charges are to become effective.

Update of the Umler Master File: Updates are processed immediately. Umler data transfers must be received by the 25th day of the month to ensure inclusion to the next month's CHARM® file.

Method: Data can be furnished via tele-communications as described in the <u>TRAIN II User Manual</u> available at Railinc.com, or by submitting your updates to the Railinc Customer Success Center at <u>csc@railinc.com</u>. Only users authorized by your company administrator may make changes to equipment records.

Umler Single Car Air Brake Test Applications can be submitted via the Umler System.

Owners Fleet Statistics, Error Reports, SCABT Manual, and Umler Contact are available on Railinc's website at: <a href="https://public.railinc.com">https://public.railinc.com</a>.

### **Requesting Changes to Umler**

To request changes to Umler, use the link below to access the UMLER CHANGE REQUEST form document. Provide details for all Umler system changes, including new elements, permissible values and business rules in the UMLER CHANGE REQUEST form. Save the form and email it to <a href="mailto:csc@railinc.com">csc@railinc.com</a>, attach the saved form to the email and send the email: <a href="https://public.railinc.com/sites/default/files/documents/Umler%20Change%20Request.dotx">https://public.railinc.com/sites/default/files/documents/Umler%20Change%20Request.dotx</a>

### **Data Specification Manual**

### General **USCD Status Code Mandatory** Identifies the current operational state

Does not Carry Forward.

### Permissible Values for USCD

ACTIVE INACTIVE 1

Ρ PRE-REGISTERED

### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-Registered.
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID	0001
The equipment stenciled number	

### Validation Rule for 0001

- -Equipment Number must not be larger than 6 digits (i.e., 999999) NOTES:
- Equipment ID includes the mark and number stenciled on the equipment. Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD999999)
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

Mechanical Designation Mandatory	UMMD
Equipment description without physical dimensions	•

Used in ETC Generation.

### Permissible Values for UMMD

LC	Box-Special Design with side doors and roof hatches
LU	Box-Special Design for heavy duty support of retractable overhead
	doors

 $\mathsf{XM}$ **Box-General Service** 

XΡ Box-Non-Insulated, Specially Equipped for Specific Commodities XPI Box-Insulated, Specially Equipped for Specific Commodities

**Equipment Type Code** UMET An alpha numeric code that describes the physical attributes of equipment

System Generated Field. This element is not eligible for Input.

### NOTES:

• Please Refer to Appendix I for More information Regarding ETC Generation

**Maint of Way Service Type** B403 Identifies equipment Maintenance Of Way function

Value does not carry forward for Equipment Group Change.

### Permissible Values for B403

Crane / Boom Support Car

- F4 Flat-Wheel Sets
- T4 Training Car
- T8 Track Geometry Car

### Validation Rule for B403

- Maint of Way Service Type can only be listed on records where the Equipment Group (0002) or Pseudo Equipment Group (B547) is listed as MISC

Built Date Mandatory	BLDT
The date the construction of the equipment is complete	•

Data is Confidential. Used for Transportation Codes. Affects Rating. Value does not carry forward for Single Clone / Multi-Clone.

### Range of Values for BLDT

Minimum	Maximum
1/1/1900	12/31/9999

### **Validation Rule for BLDT**

- -Built Date must be within the last 99 years
- -Built Date must not be in the future for equipment in Active Status
- -Prior and target equipment's Built Date (BLDT) must match for
- -Built Date cannot be updated within 30 days of the End of Service Date (B078)

- Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

Rebuilt / ILS Date	RBDT
The date the re-construction of the equipment is complete	

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Range of Values for RBDT

Minimum	Maximum
1/1/1900	12/31/9999

### **Validation Rule for RBDT**

- -Rebuilt/Increased Life Service Date must be after the Built Date (BLDT)
- -Rebuilt Date must not be more than 70 years after the Built Date (BLDT)
- -Rebuilt Date is required for Extended Service Code (A096) 1, 2, or 3 for Increased Life Service
- -Rebuilt Date is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years of service
- -If Rebuilt Date is reported then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life Service

### NOTES:

- Railroad cars -- applicable only to cars meeting status as provided in both STB Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office Manual.
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- Private box cars -- For cars qualified under the provisions of Item 621, Note 1, Freight Tariff 6007-series for the purpose of determining cars' age for calculating the mileage rates.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt Date unless car has been approved by the AAR.

**Rebuilt Flag RBFL** Identifies the equipment is nearing its end of life cycle

Data is Confidential. System Generated Field. This element is not eligible for Input.

### **Permissible Values for RBFL**

No

**Owner Mandatory** Primary reporting mark of the railroad or private company owning the car

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

**-7-**

### **Data Specification Manual**

#### NOTES:

• Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.

0002 **Equipment Group Mandatory** Identifies the various major car types Used for Transportation Codes. Affects Rating.

Lessee **LESE** 

The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### Validation Rule for LESE

- -Umler Owner (UMOW) and Lessee are not allowed to be equal
- -Lessee cannot be a child reporting mark

#### NOTES:

In order to assign privately marked cars to a pool, a railroad reporting mark must be reported.

**Maintenance Party** 

The parent reporting mark of the company responsible for the maintenance and repairs of the equipment

Does not Carry Forward.

**Mark Owner Category** 

The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

### Permissible Values for B201

- **US Private**
- C Canadian Private
- F Foreign Private
- Н Canadian Class II
- Canadian Class I
- 1 Mexican Class I
- Κ Canadian Class III
- Μ Mexican Private
- Ν US Private Steamship
- 0 Canadian Private Steamship
- Ρ Mexican Private Steamship
- Q Foreign Private Steamship
- R US Class II Railroad
- U US Class I Railroad
- V US Class III Railroad
- Mexican Class II Railroad W
- Mexican Class III Railroad

### NOTES:

• This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry.

**Prior Equipment ID** PRID

The previous reporting mark and number of the equipment Value does not carry forward for Single Clone / Multi-Clone.

### Validation Rule for PRID

- -Prior and target equipment's Built Date (BLDT) must match
- -The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

### NOTES:

• Prior ID enables equipment records to share the same historical lineage.

Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

**Last Update Date B122** Date of the last Umler element change

System Generated Field. This element is not eligible for Input.

**Equipment Add Date** B082 Date the reporting mark and number was added to the Umler system

System Generated Field. This element is not eligible for Input.

**Status Change Reason USCR** Identifies the reason for the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

### Permissible Values for USCR

- Initial Load
- Μ Movement
- 0 Status Changed Manually
- R Restencil

#### NOTES:

B201

- If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

**USCT Status Change Date** Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

**Extended Service Mandatory** A096 A code indicating the eligibility of an increase to the life cycle

Used for Transportation Codes. Value does not carry forward for Single Clone / Multi-Clone.

### Permissible Values for A096

- 1st ILS Inspection, additional 5 years of Service
- 2 2nd ILS Inspection, additional 5 years of service (10 years total)
- 3rd ILS Inspection, additional 5 years of service (15 years total)
- C Built New between January 1, 1964 - June 30, 1974, Certified for 50 Years of Service, Built New Before July 1, 1974 & Received AAR Waiver
- Ε Built new from July 1,1974, Qualified for 50 Years Service
- Ν Built Before January 1, 1964, Qualified for 40 Years Service
- Rule 88. Rebuilt cars R
- Built between January 1, 1964 June 30, 1974, Qualified for 40 Years & eligible for certification for 50 Years Service
- Car is certified (FRA Waiver & AAR) for 65 years of service from date built new from January 1, 1964

### Validation Rule for A096

- -If Rebuilt Date (RBDT) is reported, then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life
- -Extended Service Code of C cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974
- -Extended Service Code of E cannot be reported if the car was built before July 1, 1974
- -Extended Service Code of N cannot be reported if the car was built on/after January 1, 1964
- -Extended Service Code of U cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974

### NOTES:

- Value is used to calculate End of Service Date (B078).
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years service.
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) 1, 2, 3, and

## **Umler**<sup>®</sup>

### **Data Specification Manual**

B078

V for Increased Life Service.

End of Service Date

Indicates the date of the end of equipment life

Data is Confidential. System Generated Field. This element is not eligible for Input.

#### NOTES:

• Data becomes non-confidential two years prior to End of Service Date.

Do Not Load After B590

Equipment should not be loaded after date shown in the element

#### Data is Confidential

#### Validation Rules for B590

- -Do Not Load After (B590) cannot be updated thirty days prior to the date shown in the element.
- -Do Not Load After (B590) cannot be updated within thirty days of the End of Service Date (B078).
- -Do Not Load After (B590) date cannot be on or after the End of Service (B078) date.

#### NOTES:

- The element will be initially populated by End of Service (B078) minus 30 days.
- Data becomes non-confidential thirty days prior to the Do Not Load After (B590) date.

**Equipment Identification** 

**EINN** 

Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

#### NOTES.

 Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections.

Info Conflict Status

B355

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Indicates that an Informational Conflict exists on the Equipment record

Conflict Status

B050

Identifies the escalation level of equipment in active conflict

System Generated Field. Affects Rating. This element is not eligible for Input. Value does not carry forward for Add Back.

### Permissible Values for B050

- 1 Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Date of Original Conflict** 

B063

**R135** 

The date the equipment was originally placed in the current conflict

System Generated Field. This element is not eligible for Input.

Next Conflict Status

Identifies the next escalation level of an equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

### Permissible Values for B135

- 1 Subject to Zero-Rating
- 2 Subject to Restricted in Interchange

3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- · Subject to Deletion, goes into effect 365 days after Conflict Status occurs

Notice Indicator

Identifies equipment in error in Umler Notice Management

System Generated Field. This element is not eligible for Input.

Conflict Status Next Date

The date the conflict status will be escalated

B062

**B137** 

System Generated Field. This element is not eligible for Input . Value does not carry forward for Add Back.

Rate Indicator A070

Indicates the rate type applicable to the unit

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Does not Carry Forward.

### Permissible Values for A070

- 0 Zero-Rated Due to Conflict Errors
- 2 Private Mileage Rate
- 4 Private Car Owner Designated Rate
- 6 Zero-Rated Scrap (S\_,SX), AAR Overage (XA), FRA Overage (YA), Umler Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].
- B Railroad Class III Boxcar Sub19 Rate
- M Railroad Market Rate
- P Zero-Rated Railroad Class III Boxcar Sub19 Rate
- Q Zero-Rated Railroad Market Rate Due to Conflict Errors

### NOTES:

- If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.
- Rate Indicator B will be automatically reported for boxcars covered under Ex Parte No. 346 Sub 19 (A227).
- For Rate Indicator B, car must be qualified with Ex Parte 346 sub 19 (A227), reporting code 23. Can only be reported by Railinc Administrator.
- Rate Indictor B is not applicable to boxcars that were owned by Class I or affiliated Class II carriers and subsequently purchased or leased after December 30, 1983, by a non-affiliated Class II or III carrier. These cars are not excluded under the provisions of Ex Parte No 346 Sub 19.

**Private Zero Rate** 

B150

Indicates a private car is subject to contractual agreement, nullifying mileage rates

Affects Rating.

### Permissible Values for B150

Y Ye

### NOTES:

• Reporting "Y" generates Rate Indicator (A070) value 6 and a zero rate.

TTX Hourly Rate

B212

Time Charge-The TTX hourly rate for the equipment

Data is Confidential. This element is not eligible for Query.

Range of Values for B212

Minimum Maximum

0 9

### Validation Rule for B212

-TTX Hourly rate can only be set on TTX owned Equipment.

**TTX Mileage Rate** 

B213

Mileage Charge-The TTX mileage rate for the equipment

### **Data Specification Manual**

Data is Confidential. This element is not eligible for Query.

### Range of Values for B213

Minimum	Maximum
0	1

### Validation Rule for B213

-TTX Mileage rate can only be set on TTX owned Equipment.

Sub 19 (Ex Parte 346)	A227
Indicates the equipment is a Railroad Class III Sub 19 boxcar.	_

System Generated Field. Affects Rating. Value does not carry forward for Equipment Group Change.

#### Permissible Values for A227

23 Railroad Class III Sub 19 Boxcars Only

### **Validation Rule for A227**

 -Railroad Ex Parte Sub 19 Boxcar cannot be set if the Build Date (BLDT) or Rebuilt Date (RBDT) is greater than December 30, 1983

#### NOTES:

 Car must be populated with code 23 for Sub 19 (Ex Parte 346) (A227) to have Rate Indicator B (A070) generated.

First Movement Date	USAT
The first movement date under the stenciled mark of the equipment	
This element is not eligible for Input. Does not Carry Forward.	

<b>Equipment Add Company</b>		

The reporting mark of the company that added the equipment

System Generated Field. This element is not eligible for Input .

Registration Reason	B174
The code indicating the reason this equipment is added	

Does not Carry Forward.

### Permissible Values for B174

A Add-Back N New P Pending Restencil R Restencil

F	Restencil Program Ind	B177
-1	Identifies the equipment is under a restencil program	

### Permissible Values for B177

Y Yes

## Delete Reason Code B064

A code that designates the reason the equipment has been deleted Value does not carry forward for Add Back.

### Permissible Values for B064

- A Restenciled
- D Destroyed or wrecked
- L Lease terminated, removed from fleet
- P Retired unserviceable beyond economic repair
- R Rebuilt
- S Sold Serviceable
- W Over age retired for dismantling
- Y Error, reporting did not exist
- Z Other

### **Non-Compliant Wheelsets**

**B54** 

Equipment record is incomplete and has a missing wheelset component ID association. Refer to AAR Field Manual Rule 44 for industry requirements \*

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

### Validation Rule for B544

- -A Wheelset Component ID is required for each applicable location on equipment built on or after January 1, 2016
- -A Wheelset Component ID is required for each applicable location on equipment rebuilt on or after January 1, 2016 and Gross Rail Load (A266) is greater than 268,000 lbs

#### NOTES:

- A "Y" will be system generated if the equipment is active and the number of Wheelset CID's required is not equal to the Axle Count (A024) on the equipment
- Validation rule applies to equipment that has been in Active status for 60 days

### **Pseudo Equipment Group**

R547

Equipment needs to be identified as a miscellaneous record while maintaining all elements linked to the original equipment group

System Generated Field.

### Permissible Values for B547

MISC Miscellaneous

### Weight

#### Gross Rail Load/Weight Mandatory

A266

The maximum permissible weight on rail of the equipment and the load, reported in pounds

### Affects Rating.

### Range of Values for A266

Minimum	Maximum
117000	2835000

### Validation Rule for A266

-Gross Rail Load must be equal to the Load Limit (LDLT) plus the Tare Weight (A259)

#### NOTES:

R083

Use Table 1 below to determine Gross Rail Load, if Qualification for Increased Gross Rail Load (B344) does not exist.

TABLE 1 -		
Journal Size	Load per Axle	Gross Rail Load for 4-
		axle Equipment
B - 4 1/2" x 8"	25,750 lbs.	103,000 lbs.
C - 5" x 9"	35,500 lbs.	142,000 lbs.
D - 5 1/2" x 10"	44,250 lbs.	177,000 lbs.
E - 6" x 11"	55,000 lbs.	220,000 lbs.
F - 6 1/2" x 12"	65,750 lbs.	263,000 lbs.
G - 7" x 12"	78,750 lbs.	315,000 lbs.
K - 6 1/2" x 9"	71,500 lbs.	263,000 lbs.
M - 7" x 9"	78,750 lbs.	315,000 lbs.

Use Table 2 below to determine Gross Rail Load for 4-axle equipment if Qualification for Increased Gross Rail Load (B344) exists.

### TABLE 2 -

Qualification for Increased Gross Rail	Journal Size	Gross Rail Load
Load (B344)		
1	K - 6 1/2" x 9"	286,000 lbs.
1	G – 7" x 12"	286,000 lbs.
1	M – 7" x 9"	286,000 lbs.
2	F - 6 1/2" x 12"	286,000 lbs.
2	K - 6 1/2" x 9"	286,000 lbs.
3	F - 6 1/2" x 12"	268,000 lbs.
3	K - 6 1/2" x 9"	268,000 lbs.

- For multi-unit equipment, report the total gross rail load for the entire set.
- Refer to Field Manual Rule 70 if additional information is required.

A Gross Rail Load less than the listed or calculated values may be entered; however:

- Star Code (A247) must be R or S, and
- Load Limit (LDLT) must also be reduced, ensuring Tare Weight (A259) plus Load Limit (LDLT) equals the reported Gross Rail Load.

### **Data Specification Manual**

For equipment having two or more different journal sizes, see following examples:

Example for Drawbar Connected:

- A 3-unit drawbar connected car has 12 axles.
- The end units (Locations A and B) each have 4 axles with E 6" x 11" journals.
- The intermediate unit (Locations C) has 4 axles with F 6 1/2" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

8 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 440,000 lbs. + 4 ea. F-6 1/2" x 12" journal axles X 65,750 lbs. per axle = 263,000 lbs. Gross Rail Load = 703,000 lbs.

Example for Articulated Connected:

- A 5-unit articulated intermodal car has 6 trucks (12 axles).
- The end trucks (Locations A and B) each have 2 axles with E 6" x 11" journals.
- The intermediate trucks (Locations C, D, E, and F) each have 2 axles with G
   -7" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

4 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 220,000 lbs. + 8 ea. G-7" x 12" journal axles X 78,750 lbs. per axle = 630,000 lbs. Gross Rail Load = 850,000 lbs.

Tare	Wai:	αht Λ	1and	atory

A259

The equipment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

Affects Rating.

### Range of Values for A259

Minimum	Maximum
40000	1440000

### Validation Rule for A259

- -Tare Weight (A259) of BOXC with a blank Connected Unit Count (A020), must contain values between 40000 lbs. and 160000 lbs.
- -Tare Weight (A259) of BOXC where Connected Unit Count (A020) is 2, must contain values between 80000 lbs. and 320000 lbs.
- -Tare Weight (A259) of BOXC where Connected Unit Count (A020) is 3, must contain values between 120000 lbs. and 480000 lbs.
- -Tare Weight (A259) of BOXC where Connected Unit Count (A020) is 4, must contain values between 160000 lbs. and 640000 lbs.
- -Tare Weight (A259) of BOXC where Connected Unit Count (A020) is 5, must contain values between 200000 lbs. and 800000 lbs.
- -Tare Weight (A259) of BOXC where Connected Unit Count (A020) is 6, must contain values between 240000 lbs. and 960000 lbs.
- -Tare Weight (A259) of BOXC where Connected Unit Count (A020) is 7, must contain values between 280000 lbs. and 1120000 lbs.
- -Tare Weight (A259) of BOXC where Connected Unit Count (A020) is 8, must contain values between 320000 lbs. and 1280000 lbs.
- -Tare Weight (A259) of BOXC where Connected Unit Count (A020) is 9, must contain values between 360000 lbs. and 1440000 lbs.
- Tare Weight (A259) value must be reported to the nearest 100 pounds if Weighing Date (A288).

### NOTES:

- Do not report an average Tare Weight for car series, except for Pre-Registered cars
- · When cars are made active, the actual Tare Weight must be recorded

Load Limit Mandatory LDLT

The maximum permissible weight of the commodity that can be loaded into the equipment, reported in pounds

Affects Rating.

### Range of Values for LDLT

Minimum	Maximum
40000	2475000

### Validation Rule for LDLT

- -Load Limit (LDLT) of BOXC with a blank Connected Unit Count (A020), must contain values between 40000 lbs. and 275000 lbs.
- -Load Limit (LDLT) of BOXC where Connected Unit Count (A020) is 2, must contain values between 80000 lbs. and 550000 lbs.
- -Load Limit (LDLT) of BOXC where Connected Unit Count (A020) is 3, must contain values between 120000 lbs. and 825000 lbs.
- Load Limit (LDLT) of BOXC where Connected Unit Count (A020) is 4, must contain values between 160000 lbs. and 1100000 lbs.
- Load Limit (LDLT) of BOXC where Connected Unit Count (A020) is 5, must contain values between 200000 lbs. and 1375000 lbs.
- Load Limit (LDLT) of BOXC where Connected Unit Count (A020) is 6, must contain values between 240000 lbs. and 1650000 lbs.
- Load Limit (LDLT) of BOXC where Connected Unit Count (A020) is 7, must contain values between 280000 lbs. and 1925000 lbs.
- Load Limit (LDLT) of BOXC where Connected Unit Count (A020) is 8, must contain values between 320000 lbs. and 2200000 lbs.
- Load Limit (LDLT) of BOXC where Connected Unit Count (A020) is 9, must contain values between 360000 lbs. and 2475000 lbs.

#### NOTES:

 For connected unit cars report the sum of the load limits for all units in the set.

#### Weighing Status Mandatory

A289

Indicates the weight information is an estimate or an actual measurement

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A289

- A Actual
- E Estimated
- V Verified correct Tare Weight
- X Tare Weight subject to verification (System Generated)

### Validation Rule for A289

- -Equipment cannot be within a series of 10 with identical Tare Weights (A259), refer to Appendix P for further information on resolving tare weight conflicts
- -When Status Code changes to Active or Inactive Weighing Status must be reported as Actual (A) or Verified (V) within 60 days of Status Code change

Weighing Date A288

### The date the equipment was actually weighed

Value does not carry forward for Single Clone / Multi-Clone.

### Range of Values for A288

Minimum	Maximum
1/1/1900	12/31/9999

### Validation Rule for A288

- -If Weighing Date is reported the Tare Weight (A259) must be reported
- -When Weighing Date is reported then Weighing Status (A289) must be A (Actual) or V (Verified)
- -If Weighing Status (A289) is A (Actual) or V (Verified correct Tare Weight) then Weighing Date must be reported
- -Weighing Date must be on or before the current date
- -Weighing Date cannot be before Built / Rebuilt date

Cubic Feet Capacity

A067

## The maximum interior cubic feet capacity of the equipment Range of Values for A067

Minimum	Maximum
1400	99999

### Validation Rule for A067

 -Cubic Feet Capacity (A067) of BOXC with a blank Connected Unit Count (A020), must contain values between 1400 cubic feet and 12500 cubic feet

### **Data Specification Manual**

- -Cubic Feet Capacity (A067) of BOXC where Connected Unit Count (A020) is 2, must contain values between 2800 cubic feet and 25000 cubic feet
- -Cubic Feet Capacity (A067) of BOXC where Connected Unit Count (A020) is 3, must contain values between 4200 cubic feet and 37500 cubic
- -Cubic Feet Capacity (A067) of BOXC where Connected Unit Count (A020) is 4, must contain values between 5600 cubic feet and 50000 cubic
- -Cubic Feet Capacity (A067) of BOXC where Connected Unit Count (A020) is 5, must contain values between 7000 cubic feet and 62500 cubic feet
- -Cubic Feet Capacity (A067) of BOXC where Connected Unit Count (A020) is 6, must contain values between 8400 cubic feet and 75000 cubic
- -Cubic Feet Capacity (A067) of BOXC where Connected Unit Count (A020) is 7, must contain values between 9800 cubic feet and 87500 cubic
- -Cubic Feet Capacity (A067) of BOXC where Connected Unit Count (A020) is 8, must contain values between 11200 cubic feet and 100000 cubic

#### NOTES:

• For connected unit cars report the sum of all units cubic capacity.

Star Code A247 Indicates a reduction of the Load Limit (LDLT) of the equipment per AAR Rule 70

Affects Rating.

### Permissible Values for A247

- **Body Capacity less than Truck Capacity**
- S Reduced Load Limit

### NOTES:

For connected unit cars report the sum of the load limits for all units in the

Qual for Inc GRL

AAR qualification for increased Rail Load Code designating AAR approval for operating 4-axle equipment at a gross rail load greater than 263,000 lbs per AAR Rule 88

### Permissible Values for B344

- Rule 88 IGRL Code 1 (> 263,000 lbs. and <= 286,000 lbs. GRL per AAR Specification S-286)
- Rule 88 IGRL Code 2 (> 263,000 lbs. and <= 286,000 lbs. GRL) 2
- Rule 88 IGRL Code 3 (> 263,000 lbs. and <= 268,000 lbs. GRL)

### Validation Rule for B344

- -4-axle equipment having Qualification for Increased Gross Rail Load of 1 or 2 must have a Gross Rail Load (A266) that does not exceed 286,000
- -4-axle equipment having Qualification for Increased Gross Rail Load of 3 must have Gross Rail Load (A266) that does not exceed 268,000 lbs.
- -4-axle equipment having Qualification for Increased Gross Rail Load of 1 must have a Journal Size (A147) of K, G, or M
- -4-axle equipment having Qualification for Increased Gross Rail Load of 2 or 3 must have a Journal Size (A147) of F or K
- -4-axle equipment having Qualification for Increased Gross Rail Load of 1, 2, or 3 must have a Wheel Diameter (A294) of 36 or 38
- -Equipment having Qualification for Increased Gross Rail Load of 1 or 2, and a Gross Rail Load (A266) less than 286,000 lbs., must have Star Code (A247) of S
- -Equipment having Qualification for Increased Gross Rail Load (B344) of 3, and a Gross Rail Load (A266) less than 268,000 lbs., must have Star Code of S
- -4-axle equipment with Gross Rail Load (A266) greater than 263,000 lbs. and less than 315,000 lbs., and Star Code (A247) blank, must report Qualification for Increased Gross Rail Load

### Dimension Plate Code Mandatory A046 Indicates the extreme height and width clearance of the equipment Affects Rating

### Permissible Values for A046

Plate Code B C Plate Code C F Plate Code E Plate Code F G Clearance Code G N Plate Code N

#### NOTES:

- For a description of Plate Codes, please see Appendix J at the back of this
  - o Report B: If clearance does not exceed Plate B
  - o Report C: If clearance is greater than Plate B. but does not exceed Plate C
  - o Report E: If clearance is greater than Plates B and C, but does not exceed Plate E.
  - o Report F: If clearance is greater than Plates B, C and E, but does not exceed Plate F
  - o Report G: If clearance exceeds Plates B, C, E, F, and N.
  - o Report N: If clearance is greater than Plates B, C, E, and F, but does not exceed Plate N.
- There is no AAR Plate G. Clearance Code G is included in Umler to represent equipment that does not fit any existing AAR clearance plates.
- For ARTICULATED/MULTI-UNIT SET report the most restrictive clearance plate of UNIT in the set.

### **Outside Length Mandatory OSLG** The outside length over pulling faces of couplers in normal position

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for OSLG

Minimum	Maximum
41 ft 6 inches	855 ft 0 inches

### **Validation Rule for OSLG**

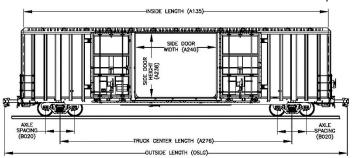

- -Outside Length (OSLG) on freight cars must exceed the Inside Length (A135) by 2 feet or more
- -Outside Length (OSLG) on freight cars (except refrigerators) must not exceed Inside Length (A135) by more than 16 feet
- -Outside Length (OSLG) on refrigerator cars (Mechanical Designation RB, RBL, RP, RPL, or RC) must not exceed Inside Length (A135) by more than 26 feet
- -Outside Length (OSLG) of BOXC with a blank Connected Unit Count (A020), must contain values between 41 feet 6 inches and 95 feet
- -Outside Length (OSLG) of BOXC where Connected Unit Count (A020) is 2, must contain values between 83 feet and 190 feet
- -Outside Length (OSLG) of BOXC where Connected Unit Count (A020) is 3, must contain values between 124 feet 6 inches and 285 feet
- -Outside Length (OSLG) of BOXC where Connected Unit Count (A020) is 4, must contain values between 166 feet and 380 feet
- -Outside Length (OSLG) of BOXC where Connected Unit Count (A020) is 5. must contain values between 207 feet 6 inches and 475 feet
- -Outside Length (OSLG) of BOXC where Connected Unit Count (A020) is 6, must contain values between 249 feet and 570 feet
- -Outside Length (OSLG) of BOXC where Connected Unit Count (A020) is 7, must contain values between 290 feet 6 inches and 665 feet
- -Outside Length (OSLG) of BOXC where Connected Unit Count (A020) is 8. must contain values between 332 feet and 760 feet
- -Outside Length (OSLG) of BOXC where Connected Unit Count (A020) is 9, must contain values between 373 feet 6 inches and 855 feet

### NOTES:

- Numeric distance over pulling faces of couplers in normal positions. For ARTICULATED/MULTI-UNIT sets report the maximum coupled length of the set. Must be between 2 and 16 feet greater than inside length and between 2 and 26 feet for R\_\_\_.
- For connected unit cars report the maximum coupled length of the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

## **Umler**<sup>®</sup>

### **Data Specification Manual**

### **Outside Extreme Width Mandatory**

A186

The outside extreme width of the equipment

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

## Range of Values for A186 Minimum Maximum

9 ft 2 inches 10 ft 10 inches

#### Validation Rule for A186

 Outside Extreme Width must not exceed 10 feet 8 inches for Plate Codes B, C, E, F, or N

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

### Outside Extreme Height Mandatory

A185

### Height from top of rail to extreme projecting height

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A185

Minimum	Maximum
11 ft 10 inches	17 ft 4 inches

### Validation Rule for A185

- -Outside Extreme Height for Plate Code B must be less than or equal to 15 feet 1 inch
- -Outside Extreme Height for Plate Code C must be less than or equal to 15 feet 6 inches
- -Outside Extreme Height for Plate Code E must be less than or equal to 15 feet 9 inches
- -Outside Extreme Height for Plate Code F must be less than or equal to 17 feet 0 inch
- -Outside Extreme Height for Plate Code N must be less than or equal to 17

### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

### Outside Height Extr Width Mandatory

A187

The highest point at which the extreme width of the equipment occurs

Displayed in feet and inches on the Web. Stored in inches

Range of Values for A187
Minimum Maximum

## 2 ft 0 inches | 17 ft 4 inches Validation Rule for A187

- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 8 inches if Outside Height Extreme Width is 13 feet 10 inches or less
- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 7 inches if Outside Height Extreme Width is 13 feet 11 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 0 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 4 inches if Outside Height Extreme Width is 14 feet 1 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 2 inches

- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 3 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 4 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 9 feet 9 inches if Outside Height Extreme Width is 14 feet 5 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 9 feet 5 inches if Outside Height Extreme Width is 14 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 9 feet 2 inches if Outside Height Extreme Width is 14 feet 7 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 8 feet 10 inches if Outside Height Extreme Width is 14 feet 8 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 8 feet 6 inches if Outside Height Extreme Width is 14 feet 9 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 8 feet 3 inches if Outside Height Extreme Width is 14 feet 10 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 7 feet 11 inches if Outside Height Extreme Width is 14 feet 11 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 7 feet 6 inches if Outside Height Extreme Width is 15 feet 0 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 7 feet 4 inches if Outside Height Extreme Width is 15 feet 1 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 10 feet 8 inches if Outside Height Extreme Width is 14 feet 3 inches or less
- Outside Extreme Width (A186) for Plate Code C must not exceed 10 feet 7 inches if Outside Height Extreme Width is 14 feet 4 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 5 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 10 feet 4 inches if Outside Height Extreme Width is 14 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 7 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 8 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 9 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 9 feet 9 inches if Outside Height Extreme Width is 14 feet 10 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 9 feet 5 inches if Outside Height Extreme Width is 14 feet 11 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 9 feet 2 inches if Outside Height Extreme Width is 15 feet 0 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 8 feet 10 inches if Outside Height Extreme Width is 15 feet 1 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 8 feet 6 inches if Outside Height Extreme Width is 15 feet 2 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 8 feet 3 inches if Outside Height Extreme Width is 15 feet 3 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 7 feet 11 inches if Outside Height Extreme Width is 15 feet 4 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 7 feet 8 inches if Outside Height Extreme Width is 15 feet 5 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 7 feet 4 inches if Outside Height Extreme Width is 15 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 8 inches if Outside Height Extreme Width is 15 feet 2 inches
- Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 6 inches if Outside Height Extreme Width is 15 feet 3 inches or less
- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 3 inches if Outside Height Extreme Width is 15 feet 4 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 9 feet 6 inches if Outside Height Extreme Width is 15 feet 5 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 8 feet 8 inches if Outside Height Extreme Width is 15 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 7 feet 11 inches if Outside Height Extreme Width is 15 feet 7 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 7 feet 1 inches if Outside Height Extreme Width is 15 feet 8 inches

### **Data Specification Manual**

- -Outside Extreme Width (A186) for Plate Code E must not exceed 6 feet 3 inches if Outside Height Extreme Width is 15 feet 9 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 8 inches if Outside Height Extreme Width is 16 feet 3 inches or less
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 7 inches if Outside Height Extreme Width is between 16 feet 4 inches and 16 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 6 inches if Outside Height Extreme Width is 16 feet 7 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 3 inches if Outside Height Extreme Width is 16 feet 8 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 0 inches if Outside Height Extreme Width is 16 feet 9 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 8 inches if Outside Height Extreme Width is 16 feet 10 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 5 inches if Outside Height Extreme Width is 16 feet 11 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 2 inches if Outside Height Extreme Width is 17 feet 0 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 8 inches if Outside Height Extreme Width (A187) is 16 feet 9 inches or less
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 6 inches if Outside Height Extreme Width (A187) is 16 feet 10 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 4 inches if Outside Height Extreme Width (A187) is 16 feet 11 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 2 inches if Outside Height Extreme Width (A187) is 17 feet 0 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 9 feet 11 inches if Outside Height Extreme Width (A187) is 17 feet 1 inch

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

### **Outside Upper Eaves Width**

A194

The width between the outside uppermost corners of the equipment

Displayed in feet and inches on the Web. Stored in inches.

kange of values for A194		
Minimum	Maximum	
5 ft 0 inches	10 ft 8 inches	

### Validation Rule for A194

- -Outside Upper Eaves Width (A194) is mandatory for boxcars built or rebuilt on or after June 1, 2015
- -Outside Upper Eaves Width must be less than or equal to the Outside Extreme Width (A186)
- Outside Upper Eaves Width must be less than or equal to the Outside Lower Eaves Width (A190)
- Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 8 inches if Outside Upper Eaves Height (A193) is 13 feet 10 inches or less
- -Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 7 inches if Outside Upper Eaves Height (A193) is 13 feet 11 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 6 inches if Outside Upper Eaves Height (A193) is 14 feet 0 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 4 inches if Outside Upper Eaves Height (A193) is 14 feet 1 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 3 inches if Outside Upper Eaves Height (A193) is 14 feet 2 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 2 inches if Outside Upper Eaves Height (A193) is 14 feet 3 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 0 inches if Outside Upper Eaves Height (A193) is 14 feet 4 inches
- Outside Upper Eaves Width for Plate Code B must not exceed 9 feet 9 inches if Outside Upper Eaves Height (A193) is 14 feet 5 inches
- Outside Upper Eaves Width for Plate Code B must not exceed 9 feet 5 inches if Outside Upper Eaves Height (A193) is 14 feet 6 inches

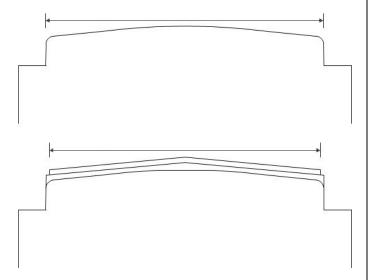

- -Outside Upper Eaves Width for Plate Code B must not exceed 9 feet 2 inches if Outside Upper Eaves Height (A193) is 14 feet 7 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 8 feet 10 inches if Outside Upper Eaves Height (A193) is 14 feet 8 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 8 feet 6 inches if Outside Upper Eaves Height (A193) is 14 feet 9 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 8 feet 3 inches if Outside Upper Eaves Height (A193) is 14 feet 10 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 7 feet 11 inches if Outside Upper Eaves Height (A193) is 14 feet 11 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 7 feet 8 inches if Outside Upper Eaves Height (A193) is 15 feet 0 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 7 feet 4 inches if Outside Upper Eaves Height (A193) is 15 feet 1 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 10 feet 8 inches if Outside Upper Eaves Height (A193) is 14 feet 3 inches or less
- -Outside Upper Eaves Width for Plate Code C must not exceed 10 feet 7 inches if Outside Upper Eaves Height (A193) is 14 feet 4 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 10 feet 6 inches if Outside Upper Eaves Height (A193) is 14 feet 5 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 10 feet 4 inches if Outside Upper Eaves Height (A193) is 14 feet 6 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 10 feet 3 inches if Outside Upper Eaves Height (A193) is 14 feet 7 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 10 feet 2 inches if Outside Upper Eaves Height (A193) is 14 feet 8 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 10 feet 0 inches if Outside Upper Eaves Height (A193) is 14 feet 9 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 9 feet 9
- inches if Outside Upper Eaves Height (A193) is 14 feet 10 inches -Outside Upper Eaves Width for Plate Code C must not exceed 9 feet 5  $\,$
- inches if Outside Upper Eaves Height (A193) is 14 feet 11 inches -Outside Upper Eaves Width for Plate Code C must not exceed 9 feet 2  $\,$
- inches if Outside Upper Eaves Height (A193) is 15 feet 0 inches
  -Outside Upper Eaves Width for Plate Code C must not exceed 8 feet 10
- inches if Outside Upper Eaves Height (A193) is 15 feet 1 inches -Outside Upper Eaves Width for Plate Code C must not exceed 8 feet 6  $\,$
- inches if Outside Upper Eaves Height (A193) is 15 feet 2 inches
  -Outside Upper Eaves Width for Plate Code C must not exceed 8 feet 3
  inches if Outside Upper Eaves Height (A193) is 15 feet 3 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 7 feet 11 inches if Outside Upper Eaves Height (A193) is 15 feet 4 inches
- Outside Upper Eaves Width for Plate Code C must not exceed 7 feet 8 inches if Outside Upper Eaves Height (A193) is 15 feet 5 inches
- Outside Upper Eaves Width for Plate Code C must not exceed 7 feet 4 inches if Outside Upper Eaves Height (A193) is 15 feet 6 inches
- -Outside Upper Eaves Width for Plate Code E must not exceed 10 feet 8 inches if Outside Upper Faves Height (A193) is 15 feet 2 inches
- inches if Outside Upper Eaves Height (A193) is 15 feet 2 inches
  -Outside Upper Eaves Width for Plate Code E must not exceed 10 feet 6
- inches if Outside Upper Eaves Height (A193) is 15 feet 3 inches -Outside Upper Eaves Width for Plate Code E must not exceed 10 feet 3
- inches if Outside Upper Eaves Height (A193) is 15 feet 4 inches -Outside Upper Eaves Width for Plate Code E must not exceed 9 feet 6
- inches if Outside Upper Eaves Height (A193) is 15 feet 5 inches -Outside Upper Eaves Width for Plate Code E must not exceed 8 feet 8
- inches if Outside Upper Eaves Height (A193) is 15 feet 6 inches
- -Outside Upper Eaves Width for Plate Code E must not exceed 7 feet 11 inches if Outside Upper Eaves Height (A193) is 15 feet 7 inches
- Outside Upper Eaves Width for Plate Code E must not exceed 7 feet 1 inches if Outside Upper Eaves Height (A193) is 15 feet 8 inches
- -Outside Upper Eaves Width for Plate Code E must not exceed 6 feet 3 inches if Outside Upper Eaves Height (A193) is 15 feet 9 inches
- -Outside Upper Eaves Width for Plate Code F must not exceed 10 feet 8 inches if Outside Upper Eaves Height (A193) is 16 feet 3 inches
- Outside Upper Eaves Width for Plate Code F must not exceed 10 feet 7 inches if Outside Upper Eaves Height (A193) is between 16 feet 4 inches and 16 feet 6 inches

### **Data Specification Manual**

- -Outside Upper Eaves Width for Plate Code F must not exceed 10 feet 6 inches if Outside Upper Eaves Height (A193) is 16 feet 7 inches
- -Outside Upper Eaves Width for Plate Code F must not exceed 10 feet 3 inches if Outside Upper Eaves Height (A193) is 16 feet 8 inches
- -Outside Upper Eaves Width for Plate Code F must not exceed 10 feet 0 inches if Outside Upper Eaves Height (A193) is 16 feet 9 inches
- -Outside Upper Eaves Width for Plate Code F must not exceed 9 feet 8 inches if Outside Upper Eaves Height (A193) is 16 feet 10 inches
- -Outside Upper Eaves Width for Plate Code F must not exceed 9 feet 5 inches if Outside Upper Eaves Height (A193) is 16 feet 11 inches
- -Outside Upper Eaves Width for Plate Code F must not exceed 9 feet 2 inches if Outside Upper Eaves Height (A193) is 17 feet 0 inches
- -Outside Upper Eaves Width for Plate Code N must not exceed 10 feet 8 inches if Outside Upper Eaves Height (A193) is 16 feet 9 inches or less
- -Outside Upper Eaves Width for Plate Code N must not exceed 10 feet 6 inches if Outside Upper Eaves Height (A193) is 16 feet 10 inches
- -Outside Upper Eaves Width for Plate Code N must not exceed 10 feet 4 inches if Outside Upper Eaves Height (A193) is 16 feet 11 inches
- -Outside Upper Eaves Width for Plate Code N must not exceed 10 feet 2 inches if Outside Upper Eaves Height (A193) is 17 feet 0 inches
- -Outside Upper Eaves Width for Plate Code N must not exceed 9 feet 11 inches if Outside Upper Eaves Height (A193) is 17 feet 1 inch

#### NOTES:

• For connected unit cars report the dimension of the largest unit in the set

### Outside Upper Eaves Hght Mandatory

A193

Height from the top of rail to the uppermost outside corner of the equipment

Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A193

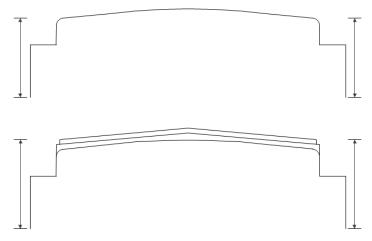

Minimum	Maximum
8 ft 0 inches	17 ft 4 inches

### Validation Rule for A193

- Outside Upper Eaves Height must not exceed the Outside Extreme Height
   Outside Upper Eaves Height must be greater than or equal to the Outside Lower Eaves Height (A189)
- -Outside Upper Eaves Height for Plate Code B must not exceed 15 feet 1 inch
- -Outside Upper Eaves Height for Plate Code C must not exceed 15 feet 6 inches
- -Outside Upper Eaves Height for Plate Code E must not exceed 15 feet 9 inches
- -Outside Upper Eaves Height for Plate Code F must not exceed 17 feet 0 inches
- Outside Upper Eaves Height for Plate Code N must not exceed 17 feet 1 inch

### NOTES:

· For connected unit cars report the dimension of the largest unit in the set.

Outside Lower Eaves Width	A190
Width over lower eaves at sides of car (see diagram)	

Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A190

Minimum	Maximum
8 ft 6 inches	10 ft 8 inches

### Validation Rule for A190

- -Outside Lower Eaves Width must not exceed the Outside Extreme Width (A186)
- -Outside Lower Eaves Width must be greater than or equal to Outside Upper Eaves Width (A194)
- Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 13 feet 10 inches or less
- -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 7 inches if Outside Lower Eaves Height (A189) is 13 feet 11 inches
- -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 6 inches if Outside Lower Eaves Height (A189) is 14 feet 0 inches
- -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 3 inches if Outside Lower Eaves Height (A189) is 14 feet 2 inches
- -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 2 inches if Outside Lower Eaves Height (A189) is 14 feet 3 inches
- -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 0 inches if Outside Lower Eaves Height (A189) is 14 feet 4 inches
- -Outside Lower Eaves Width for Plate Code B must not exceed 9 feet 9 inches if Outside Lower Eaves Height (A189) is 14 feet 5 inches
- Outside Lower Eaves Width for Plate Code B must not exceed 9 feet 5 inches if Outside Lower Eaves Height (A189) is 14 feet 6 inches
- Outside Lower Eaves Width for Plate Code B must not exceed 9 feet 2 inches if Outside Lower Eaves Height (A189) is 14 feet 7 inches
- -Outside Lower Eaves Width for Plate Code B must not exceed 8 feet 10 inches if Outside Lower Eaves Height (A189) is 14 feet 8 inches
- -Outside Lower Eaves Width for Plate Code C must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 14 feet 3 inches or less
- -Outside Lower Eaves Width for Plate Code C must not exceed 10 feet 7 inches if Outside Lower Eaves Height (A189) is 14 feet 4 inches
- -Outside Lower Eaves Width for Plate Code C must not exceed 10 feet 6 inches if Outside Lower Eaves Height (A189) is 14 feet 5 inches
- -Outside Lower Eaves Width for Plate Code C must not exceed 10 feet 4 inches if Outside Lower Eaves Height (A189) is 14 feet 6 inches
- -Outside Lower Eaves Width for Plate Code C must not exceed 10 feet 3 inches if Outside Lower Eaves Height (A189) is 14 feet 7 inches
- -Outside Lower Eaves Width for Plate Code C must not exceed 10 feet 2 inches if Outside Lower Eaves Height (A189) is 14 feet 8 inches
- -Outside Lower Eaves Width for Plate Code C must not exceed 10 feet 0 inches if Outside Lower Eaves Height (A189) is 14 feet 9 inches

### **Data Specification Manual**

- Outside Lower Eaves Width for Plate Code C must not exceed 9 feet 9 inches if Outside Lower Eaves Height (A189) is 14 feet 10 inches
- -Outside Lower Eaves Width for Plate Code C must not exceed 9 feet 5 inches if Outside Lower Eaves Height (A189) is 14 feet 11 inches
- Outside Lower Eaves Width for Plate Code C must not exceed 9 feet 2 inches if Outside Lower Eaves Height (A189) is 15 feet 0 inches
- -Outside Lower Eaves Width for Plate Code C must not exceed 8 feet 10 inches if Outside Lower Eaves Height (A189) is 15 feet 1 inches
- Outside Lower Eaves Width for Plate Code C must not exceed 8 feet 6 inches if Outside Lower Eaves Height (A189) is 15 feet 2 inches
- Outside Lower Eaves Width for Plate Code E must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 15 feet 2 inches or less
- -Outside Lower Eaves Width for Plate Code E must not exceed 10 feet 6 inches if Outside Lower Eaves Height (A189) is 15 feet 3 inches
- -Outside Lower Eaves Width for Plate Code E must not exceed 10 feet 3 inches if Outside Lower Eaves Height (A189) is 15 feet 4 inches
- -Outside Lower Eaves Width for Plate Code E must not exceed 9 feet 6 inches if Outside Lower Eaves Height (A189) is 15 feet 5 inches
- Outside Lower Eaves Width for Plate Code E must not exceed 8 feet 8 inches if Outside Lower Eaves Height (A189) is 15 feet 6 inches
- Outside Lower Eaves Width for Plate Code F must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 16 feet 3 inches or less
- Outside Lower Eaves Width for Plate Code F must not exceed 10 feet 7 inches if Outside Lower Eaves Height (A189) is between 16 feet 4 inches and 16 feet 6 inches
- -Outside Lower Eaves Width for Plate Code F must not exceed 10 feet 6 inches if Outside Lower Eaves Height (A189) is 16 feet 7 inches
- -Outside Lower Eaves Width for Plate Code F must not exceed 10 feet 3 inches if Outside Lower Eaves Height (A189) is 16 feet 8 inches
- -Outside Lower Eaves Width for Plate Code F must not exceed 10 feet 0 inches if Outside Lower Eaves Height (A189) is 16 feet 9 inches
- Outside Lower Eaves Width for Plate Code F must not exceed 9 feet 8 inches if Outside Lower Eaves Height (A189) is 16 feet 10 inches
- -Outside Lower Eaves Width for Plate Code F must not exceed 9 feet 5 inches if Outside Lower Eaves Height (A189) is 16 feet 11 inches
- -Outside Lower Eaves Width for Plate Code F must not exceed 9 feet 2 inches if Outside Lower Eaves Height (A189) is 17 feet 0 inches
- Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 16 feet 9 inches or less
- -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 6 inches if Outside Lower Eaves Height (A189) is 16 feet 10 inches
- -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 4 inches if Outside Lower Eaves Height (A189) is 16 feet 11 inches
- -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 2 inches if Outside Lower Eaves Height (A189) is 17 feet 0 inches
- -Outside Lower Eaves Width for Plate Code N must not exceed 9 feet 11 inches if Outside Lower Eaves Height (A189) is 17 feet 1 inch

### NOTES:

- Round fraction to the higher inch, e.g., 05 1/4" = 06"
- For connected unit cars report the dimension of the largest unit in the set.

Outside Lower Eaves Hght A189

Height from top of rail to lower eaves at side of car (see diagrams)
Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A189

Minimum	Maximum
8 ft 0 inches	17 ft 4 inches

### Validation Rule for A189

- -Outside Lower Eaves Height must not exceed the Outside Extreme Height (A185)
- Outside Lower Eaves Height must not exceed Outside Upper Eaves Height (A193)
- -Outside Lower Eaves Height for Plate Code B must not exceed 15 feet 1
- Outside Lower Eaves Height for Plate Code C must not exceed 15 feet 6 inches

- Outside Lower Eaves Height for Plate Code E must not exceed 15 feet 9 inches
- -Outside Lower Eaves Height for Plate Code F must not exceed 17 feet 0 inches
- -If Outside Lower Eaves Width (A190) is reported then Outside Lower Eaves Height must be reported
- Outside Lower Eaves Height for Plate Code N must not exceed 17 feet 1 inch

#### NOTES:

- Round fraction to the higher inch, e.g., 05 1/4" = 06"
- For connected unit cars report the dimension of the largest unit in the set.

Inside Length Mandatory	A135
The inside length of the equipment from end to end inside walls,	linings, and
permanent bulkheads	• 🛦

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A135

Minimum	Maximum
39 ft 0 inches	93 ft 0 inches

#### NOTES

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the shortest dimension of a unit in the set.
- Outside Length (OSLG) on freight cars must exceed the Inside Length (A135) by 2 feet or more.
- Outside Length (OSLG) on freight cars (except refrigerators) must not exceed Inside Length (A135) by more than 16 feet.
- Outside Length (OSLG) on refrigerator cars (Mechanical Designation RB, RBL, RP, RPL or RC) must not exceed Inside Length (A135) by more than 26 feet.

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A138

Minimum	Maximum
8 ft 6 inches	9 ft 8 inches

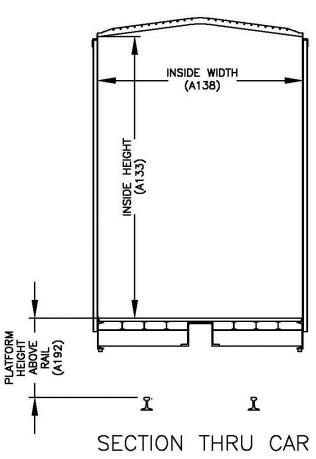

### Validation Rule for A138

-Inside Width/Inside Platform Width must not exceed Outside Extreme Width

• For connected unit cars report the shortest dimension of a unit in the set.

## **Umler**<sup>6</sup>

### **Data Specification Manual**

Inside Height A13	3
-------------------	---

The inside height of the equipment from the floor to the top of the side, or to the lowest point of the interior ceiling

Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A133

Minimum	Maximum
8 ft 10 inches	13 ft 4 inches

### Validation Rule for A133

- -Refrigerator Cars require an Inside Height of greater than or equal to 6 feet
- -Inside Height must not exceed Outside Extreme Height (A185)
- -All Box Cars with a Built Date (BLDT) or Rebuilt Date (RBDT) on or after April 1, 2016 must report Inside Height

For connected unit cars report the shortest dimension of a unit in the set.

Truck Center Length	A276
The length between the centers of the two truck systems	

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A276

Minimum	Maximum
22 ft 6 inches	76 ft 11 inches

### Validation Rule for A276

-Truck Center Length is required for cars with an Outside Length of greater than 62 feet 6 inches

### NOTES:

• For connected unit cars report the dimension of the largest unit in the set.

**Platform Hght Above Rail** A192 Describes the platform height above the rail in inches

### Range of Values for A192

Minimum	Maximum
30	60

### Validation Rule for A192

- -High Cube, Plate F Box Cars must report Platform Height Above Rail, if built after July 27, 2010
- -Platform Height Above Rail (A192) is required for Boxcars where the Plate Code (A046) exceeds C and the Built Date (BLDT) or Rebuilt Date (RBDT) is on or after July 1, 2016

Door	
Side Door Type Mandatory	B193
Indicates the description of the side door	•

#### Used in ETC Generation.

- Permissible Values for B193 01 Single Sliding Doors
- 02 Single Plug Doors
- **Double Sliding Doors** 04
- 06 **Double Plug Doors**
- 80 **Combinations Sliding And Plug Doors**
- 10 Split Refrigerator Door (Hinged)
- 11 More than One Opening on Same Side
- 13
- 15 Permanently Closed or No Side Door
- 16 All Door Box Car(L\_4\_ Only)
- 17 Double, Double Plug Doors

### Validation Rule for B193

- -Box Cars with Mechanical Designation LU require a Box Side Door Type of 16 (All Door Box Car)
- -Box Side Door Type of 16 (All Door Box Car) is only applicable to Box Cars with Mechanical Designation LU
- -Box Cars that have a Side Door Type of 1, 2, 4, 6 or 8 must have a Side Door Orientation (B192) of S or C

**Box Side Door Orientation** B192 Indicates the position of the side door on a box car

### Permissible Values for B192

Centered Staggered

### Validation Rule for B192

-Box Side Door Orientation is not applicable to (Mechanical Designation LU) Box Cars

**Side Door Width** A240 The width of the side door opening

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A240

Minimum	Maximum
6 ft 0 inches	27 ft 0 inches

### **Validation Rule for A240**

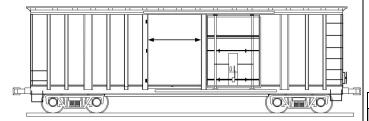

- -Side Door Width of Refrigerator Cars, Mechanical Designations (RB, RBL, RC, RP, RPL) must not exceed 21 feet 11 inches
- -Side Door Width of Box Cars (Mechanical Designation LU) must be greater than or equal 24 feet 8 inches
- -Side Door Width requires that Side Door Height (A238) also be entered
- -Side Door Height (A238) requires that Side Door Width also be entered
- -Side Door Width must not be reported for Boxcars with Side Door Type (B193) of 15
- -Side Door Width must be reported for Boxcars whose Side Door Type (B193) is not 15

## Umler'

### **Data Specification Manual**

### NOTES:

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- If more than one opening on the side, report the width of the maximum continuous opening
- For connected unit cars report the dimension of the smallest side door width of a unit in the set.

Side Door Height	A238
The height of the side door opening	

Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A238

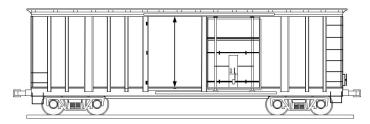

Minimum	Maximum
8 ft 0 inches	12 ft 11 inches

### Validation Rule for A238

- -Side Door Height must not be reported for Boxcars with Side Door Type (B193) of 15
- -Side Door Height must be reported for Boxcars whose Side Door Type (B193) is not 15

#### NOTES:

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the dimension of the smallest unit in the set.

End Door Width	A082
The width of the end door opening in inches	

Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A082

Minimum	Maximum
8 ft 0 inches	10 ft 2 inches

### Validation Rule for A082

-End Door Width is not applicable to Refrigerator Cars, Mechanical Designations (RB, RBL, RP, RPL or RC)

### NOTES:

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the dimension of the smallest end door width of a unit in the set.

End Door Height	A080
The height of the end door opening in inches	

Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A080

Minimum	Maximum
8 ft 6 inches	10 ft 0 inches

### **Validation Rule for A080**

- -End Door Height is not applicable to Refrigerator Cars, Mechanical Designations (RB, RBL, RP, RPL or RC)
- -End Door Height must not be reported if End Door Width is not reported
- -End Door Height must be reported if End Door Width is reported

### NOTES:

- Round fraction to the lower inch, e.g., 05 ¼" = 05"
- For connected unit cars report the dimension of the smallest end door height of a unit in the set.

Anti-Pilferage Locking	B016
Indicates that an anti-pilferage locking device is available	

### Permissible Values for B016

Yes

Door Assist Type	B072
Indicates the type of door assist on the equipment	

### Permissible Values for B072

- **Puller Bracket**
- Н Hydraulic
- Not Equipped Ν
- Unknown

### Validation Rule for B072

- -Door Assist is not applicable to Refrigerator Cars
- -Door Assist Type must be populated if the equipment was built or rebuilt on or after Dec 1, 2015
- -Equipment built on or after Dec 1, 2015 cannot have a Door Assist Type of Unknown

## **Specification** B256 The total number of trucks on the equipment

System Generated Field. This element is not eligible for Input.

### Range of Values for B256

Minimum	Maximum
2	18

Axle Count Mandatory	A024
The total number of axles on the equipment	•

### Affects Rating.

**Truck Count** 

### Range of Values for A024

Minimum	Maximum
4	36

### Validation Rule for A024

- -Axle Count must be greater than or equal to 4
- -Axle Count for an articulated car must be greater than or equal to ((Connected Unit Count (A020)  $\times$  2) + 2)
- -Axle Count for a draw bar connected car must be greater than or equal to (Connected Unit Count (A020) x 4)
- -Total Axle Count must match sum of truck axle counts

Wheel Bearing Type Mandatory	B191
Indicates the wheel bearing journal design for the equipment	• -

Affects Rating.

### Permissible Values for B191

Plain R Roller

### Validation Rule for B191

-Cars with Plain Bearings will have a Transportation Code (TCOD) and Transportation Condition Code (TCCD) of either YA, S\_, SX, or XJ

= Affects Rating

**- 18 -**

\*=Conditionally Mandatory

### **Data Specification Manual**

B021

-Equipment cannot have Plain Bearings if Built Date (BLDT) is on or after January 1, 1993

**Bearing Shielded From HBD** 

Indicates the wheel bearings are shielded from wayside hot box detectors

### Permissible Values for B021

B026 Brake Shoe Type Mandatory Indicates the type of brake shoe on the equipment

### Permissible Values for B026

- C **Tread Conditioning**
- Н **High Friction Composite**
- L Low Friction Composite/Cast Iron

**CC Side Bearing Type** A146

Indicates the travel range of the constant contact side bearings installed on the equipment

#### Permissible Values for A146

- Long Travel Constant Contact
- SC Short Travel Constant Contact

#### Validation Rule for A146

-Equipment having Qualification for Increased Gross Rail Load (B344) of 1 must have Constant Contact Side Bearing Type of LC

### **Empty/Load Device Eqpd**

B075

Indicates that the air brake system includes a device to determine if the equipment is empty or loaded, and then varies the braking forces accordingly

### Permissible Values for B075

Yes

Body Material <i>Mandatory</i>	A030
The material that composes the body of the equipment	•

Used in ETC Generation.

### Permissible Values for A030

- 01 Aluminum
- 04 Combination
- Fiberglass Reinforced Composite 09
- 18 Stainless Steel
- Standard Steel 19
- 30 Wood

### NOTES:

• Used in ETC Generation for Mechanical Designation (UMMD) RB, RBL, RP,

Center of Gravity Empty A045 When empty, indicates the height from Top of Rail to the Center of Gravity

#### Range of Values for A045 Minimum Maximum

80

### Validation Rule for A045

-All cars that exceed Plate Code (A046) C must report Center of Gravity Empty except for cars with Equipment Type Code (UMET) of J\_\_\_

**Remote Monitoring Device** B176 Indicates the equipment has a device that transmits a signal or records data

### Permissible Values for B176

Yes

Ν No

### NOTES:

• Per AAR S-2045, This may be data related to ride quality, geographic location, temperature/condition of the load, load/empty status, etc.

**AEI High Temperature Tag** 

B006

Indicates the equipment is equipped with a high temperature AEI tag

### Permissible Values for B006

High Temperature Tag

**Permanent Heater** 

B147

Indicates the equipment is equipped with a permanent heater to maintain commodities at a consistent temperature

### Permissible Values for B147

Yes

#### Validation Rule for B147

-Permanent Heaters are only applicable to Boxcars with Mechanical Designation (UMMD) of XLI or MWM

#### **Connected Unit Count**

Δ020

Indicates the number of units within an articulated or multi-unit equipment

#### Affects Rating

Range of Values for A020 Minimum Maximum

#### Validation Rule for A020

- -Connected Unit Count must equal the number of Unit Segments
- -Unit Segment Component elements must not be reported if the Connected Unit Count is not reported
- -Unit Segment Component elements must be reported if Connected Unit Count is reported

### Intermediate Conn Style

B115

Indicates the method by which two or more pieces of equipment are connected

### Permissible Values for B115

- **Articulated Connector** Α
- **Drawbar Connector**

### Validation Rule for B115

- -Intermediate Connector Style is required for multi-unit equipment
- -Intermediate Connector Style must not be reported for single unit equipment

### **Operating Brakes Mandatory**

A182

5

The number of air brake control valves on the equipment (excludes hand brakes). One control valve consists of a service portion, emergency portion, and pipe bracket. Example: DB-60 control valve

### Permissible Values for A182

2 4 1 6 7 8 9

### Validation Rule for A182

- -Operating Brakes must be reported for all equipment
- -Operating Brakes (A182) must be 1 for non-articulated equipment with an Axle Count (A024) equal to 4

• Excludes empty/load device, number 8 vent valve, and proportion valve.

**ECP Brake Type** 

**B327** 

Indicates the type of electronic controlled pneumatic brake used on the equipment

### Permissible Values for B327

- N Not Equipped
- 0 Overlay - Both ECP & Air Brake
- Stand Alone ECP Only

### Validation Rule for B327

-Equipment must have a value entered for ECP Brake Type if built or rebuilt after June 28, 2012

### **Data Specification Manual**

ECP Brake Builder	B328
The manufacturer of the electronic controlled pneumatic brake used on the	
equipment	

Permissible Values for B328 NYAB New York Air Brake

WABT WARTEC Validation Rule for B328

- -If ECP Brake Type (B327) is Stand Alone or Overlay then a value must be entered for ECP Brake Builder
- -If ECP Brake Type (B327) is Not Equipped then ECP Brake Builder is not reportable

Slack Adjuster Group	B538
The clack adjuster group on the equipment per AAP Field Manual Pu	ılo #9 🌞

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B538

Α	Group A	В	Group B	С	Group C	D	Group D
Ε	Group E	F	Group F	G	Group G	Н	Group H
J	Group J	L	Group L	M	Group M	Ν	Group N
0	Group O	Р	Group P	Q	Group Q	R	Group R
1	Internal	2	Unequinned				

#### Validation Rule for B538

- Slack Adjuster Group is mandatory for all equipment built or rebuilt on or after January 1, 2016
- If Slack Adjuster Group is reported as "1" then Brake Cylinder Mount Type (B540) must be reported as "T"
- If Slack Adjuster Group is "1" or "2", then Slack Adjuster CID (B359) must not be reported.

#### NOTES:

Permissible value of "1 – Internal" identifies special truck mounted internal slack adjuster within brake cylinder.

Brake Cylinder Mount Type	B540
Identifies the location of the brake cylinder	

### Permissible Values for B540

**Body Mounted** 

Truck Mounted

### Validation Rule for B540

- Brake Cylinder Mount Type is mandatory for all equipment built or rebuilt on or after January 1, 2016

Equipment Builder	A035
Identifies the original manufacturer of the equipment	*

### Permissible Values for A035

American Car & Foundry ACF **ACFX ACF Industries ARI Industries** ARI **BERW** Berwick Forge **BFTH** Bethlehem Car Works **BSP Bethlehem Steel Corporation CFF** Canadian Car & Foundry

THRL Thrall

TREN Trenton Works TRIN Trinity UNKN Unknown OWNER RAILROAD

### Validation Rule for A035

- -Equipment Builder must be populated if the Built Date (BLDT) is July 1, 2010 or newer
- -Equipment built or rebuilt on or after July 1, 2010 cannot have a Equipment Builder of Unknown
- -Equipment with a Built Date (BLDT) on or after July 1, 2010 cannot have an Equipment Builder Code of OWNER RAILROAD.
- -Equipment Builder can have a value of MULT only if the equipment has multiple units.

**Builder Lot Code** B030

A unique identifier for a group of equipment built by one manufacturer under the same contract

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

### Validation Rule for B030

-Equipment built or rebuilt on or after June 28, 2012 must have a value for **Builder Lot Code** 

**Built Country** R031

The country where the equipment was constructed

Data is Confidential

### Permissible Values for B031

CA Canada MX Mexico

US **United States** 

**B170 Rebuilt Country** The country where the equipment was re-constructed

### Permissible Values for B170

CA Canada MX Mexico

US **United States** 

**FRA Reflectorization** B096

Indicates the equipment owner assumes responsibility for applying reflectorization tape

### Permissible Values for B096

Reflectorization Plan W Reflectorization Waiver

### Validation Rule for B096

-Reflectorization is mandatory for all equipment after November 28, 2015.

**Refrig Emission Code B345** 

California State Emission standards for refrigeration units

Value does not carry forward for Single Clone / Multi-Clone.

Permissible Values for B345

# **Umler**<sup>6</sup>

### **Data Specification Manual**

- Not Qualified Qualified Q
- Ultra-Qualified U

Air Hose Arrangement **B524** The type of trainline air hose arrangement

### Permissible Values for B524

- S-424 Angle Cock Location
- S-425 Angle Cock Location on Cars Equipped with AAR Type F Coupler В
- S-426 Angle Cock Location on Cars with Floating Sills C
- S-427 Angle Cock and Air Brake Hose Location on Cars with Excessive D Overhang Preventing Compliance with AAR Standards
- Ε S-428 Angle Cock Location on Cars Equipped with AAR Type F Coupler and Cushioned Underframe
- F S-4003 (Former Standard)
- S-4003x (Former Standard Retrofitted to Meet All Dimensions Except G
- Н S-4003-05 (Current Standard Train Line Arrangement for Cars with F-Shank Couplers)
- S-4021 Angle Cock and Brake Hose Location on Cars with EOCC (E and
- S-4021 Coupler Mounted Bracket End Arrangement 1
- Κ S-4028 Train Line Arrangement with Displaceable Union on Cars with EOCC and Couplers Not Exceeding 45 in. in Length
- L S-4029 Train Line Arrangement with Displaceable Union on Cars with EOCC and Couplers Exceeding 45 in. in Length
- S-4030 Trolley Arrangement on Cars with EOCC and E-Shank Couplers

#### Validation Rule for B524

-Air Hose Arrangement must be reported for this equipment if it is Built or Rebuilt on or after April 22, 2014.

#### NOTES:

- If any of the following conditions apply, Air Hose Arrangement (B524) must be reported for cars Built or Rebuilt on or after April 22, 2014:
  - Draft Gear Type (B073) at any location is C or E.
  - Connected Unit Count (A020) is reported.
  - Outside Length (OSLG) is greater than or equal to 70 feet (840 inches).
  - The overhang is greater than 5 feet 6 inches (66 inches). Overhang is calculated as follows:
  - 0.5 \* (Outside Length, in inches, minus Truck Center Length, in inches, minus 31 inches)
    - For all other equipment, reporting Air Hose Arrangement is optional.

### 4-Pressure ABT Receiver Eqpd

B539

Identifies if the equipment is equipped with a 4-pressure air brake test receiver

Value does not carry forward for Single Clone / Multi-Clone.

### Permissible Values for B539

- Ε Equipped
- Ν Not Equipped

### NOTES:

· An "E" will be system generated if a 4-Pressure ABT is reported on the equipment.

### Feature

Floor Material A104

Describes the type of construction material used for the equipment floor

### Permissible Values for A104

- 01 Aluminum
- 02 Aluminum (Ribbed)
- 05 Composite Nailable (considered same as wood
- 06 Composite Nailable, Reinforced (considered same as wood)
- 14 Other
- Other, Reinforced 15
- 19 Standard Steel
- 23 Steel Nailable (includes alternate wood and steel floor
- 24 Steel Nailable, Reinforced (includes alternate wood and steel floor

- 25 Standard Steel, Reinforced
- 30 Wood
- 31 Wood (Ribbed)
- 32 Wood, Double
- 33 Wood, Double, Reinforced
- Wood Floor with Steel Protective Plates (includes perforated steel) 34
- 35 Wood Floor, Reinforced, with Steel Protective Plates (includes perforated steel)
- 36 Wood Floor, Reinforced

### Validation Rule for A104

-Only Refrigerated Boxcars or Boxcars with Mechanical Designation MWM can have Floor Material codes of 1, 2, or 31.

### Fir Strength Classfn Mandatory

A102

Describes the maximum weight the equipment floor can support

#### Permissible Values for A102

- 01K 01K - Does not meet minimum requirements
- 25000 Pounds 25K
- 50K 50000 Pounds
- 60K 60000 Pounds
- 70K 70000 Pounds
- 80K 80000 Pounds

### Validation Rule for A102

- A Floor Strength Classification of 50K or greater must be reported for equipment with a Built Date (BLDT) on or after April 1, 2016
- Refrigerated and Insulated Box cars with Mechanical Designations (UMMD) of RB, RBL, RC, RP, RPL, XLI, XPI must report a Floor Strength Classification of 25K or greater for equipment with a Built Date (BLDT) on or after April 1, 2016

#### NOTES:

See the Manual of Standards and Recommended Practices Design, Fabrication, and Construction of Freight Cars (MSRP), AAR Specification M-1001, Chapter 4 (Lift Truck Wheel Loads) for the floor strength requirements of boxcars.

### Floor Drain Equipped

B095

Indicates the equipment floor has a drain

### Permissible Values for B095

Yes

### Validation Rule for B095

-Floor Drain is only applicable to Refrigerator Cars with Mechanical Designation (UMMD) of RB, RBL, RC, RP, RPL

### **Wood Racks Covering Floor**

B233

### Reinforcement of the equipment floor using wood racks

### Permissible Values for B233

### Validation Rule for B233

-Wood Racks Covering Floors are only applicable to Refrigerator Cars with Mechanical Designations (UMMD) of RB, RBL, RP, RPL, RC

### **Pallet Equipped**

B144

### Indicates if equipment is equipped with pallets Permissible Values for B144

### Validation Rule for B144

-Pallets are not applicable to Mechanical Designation (UMMD) XM

A158

Describes the type of construction material used in the lining of equipment

### Permissible Values for A158

- 07 Composite Wood and Steel
- 08 **Fiberglass**
- 17 Sheet Metal
- 26 Synthetic

= Affects Rating **- 21 -**

### **Data Specification Manual**

29 Vinyl

30 Wood

#### Validation Rule for A158

-Refrigerator Cars with Mechanical Designation (UMMD) of RB, RBL, RC, RP, RPL cannot have Lining Material codes of 7 or 29

### **Bulkhead Type**

B034

Identifies the type of bulkhead attached to the equipment

### Permissible Values for B034

Fixed Inflatable Moveable

### Validation Rule for B034

-Refrigerator Cars with Mechanical Designation (UMMD) of RB, RBL, RC, RP, RPL cannot have Lining Material codes of 7, or 29

### **Column Load Dividers**

B046

Indicates the equipment is column load divider equipped

### Permissible Values for B046

Yes

#### Validation Rule for B046

-Column Load Dividers are only applicable to Box Cars with Mechanical Designation (UMMD) of XP, XPI, XF, XL, XLI, or MWM

**Interior Rack** 

**B114** 

### Indicates the equipment is interior rack equipped

### Permissible Values for B114

Yes

### Validation Rule for B114

-Interior racks are not applicable to Box Cars with Mechanical Designation (UMMD) of XM

### **Side Filler Equipped**

B194

Indicates the equipment is side filler equipped used to prevent shifting within the car during transit

### Permissible Values for B194

Yes

### Validation Rule for B194

-Side Filler is not applicable to Box Cars with Mechanical Designation (UMMD) of XM

### Lading Strap Anchor Eqpd

Indicates the equipment has fixed devices or design features which provide connection points for straps or bands securing the lading

### Permissible Values for B121

Yes

### Adj Lading Strap Equipped

B281

Indicates the equipment has adjustable straps or a strap system used for securing the lading

### Permissible Values for B281

Yes

### Validation Rule for B281

-If Adjustable Lading Strap Equipped is Yes, then Lading Strap Anchor Equipped (B121) must also be populated

### **Belt Rail Equipped**

R024

### Indicates the equipment is belt rail equipped

### Permissible Values for B024

Yes Υ

**Rub Rail** B183

Indicates the equipment is rub rail anchoring equipped

### Permissible Values for B183

#### Validation Rule for B183

-Rub Rails are only applicable to Box Cars with Mechanical Designation (UMMD) of XP, XPI, XL, XLI or MWM

### **Retention Bar Equipped**

**B269** 

### Indicates the equipment is retention bar equipped

Yes

### Validation Rule for B269

Permissible Values for B269

-Retention Bars are only applicable to Box Cars with Mechanical Designation (UMMD) of XP, XPI, XL, XLI or MWM

### **Roof Type**

A226

### Describes the type of roof or hatches on the equipment

#### Permissible Values for A226

- Rectangular or square roof hatches
- 9 Rectangular or square hatches offset from center line of

### Validation Rule for A226

- -Refrigerator Cars with Mechanical Designation (UMMD) of RB, RBL, RC, RP, RPL cannot have a Roof Type reported
- -Rectangular or Square Roof Hatches are only applicable to Boxcars with Mechanical Designation (UMMD) LC

#### **Vent Openings**

**B222** 

### Indicates the equipment has vent openings

### Permissible Values for B222

#### Validation Rule for B222

-Vent Openings are only applicable to Boxcars (Mechanical Designation of XP, XPI. or MWM)

### **Refrigeration Fuel Type**

A207

## Type of fuel used in the refrigeration unit

### Permissible Values for A207

Diesel

### **Validation Rule for A207**

- Refrigeration Fuel Type is only applicable to Refrigerator cars with Mechanical Designation (UMMD) of RP and RPL

### **Refrigeration Level**

B172

### Describes the level of refrigeration to be used within the equipment

### Permissible Values for B172

Zero Only (Frozen) F

Non-Frozen

W Wide Range (Frozen to Non-Frozen)

### Validation Rule for B172

-Refrigeration Level is only applicable to Refrigerator Cars with Mechanical Designation (UMMD) of RP and RPL

### **Class A Explosives Eqpd**

B089

### Indicates the equipment is equipped to handle class A explosives

Permissible Values for B089 Yes

### Validation Rule for B089

-Class A Explosives handling is only applicable to Box Cars with Mechanical Designation (UMMD) of RB, RBL, XL, XM, XLI, XP, XPI

### Cost

**Original Cost** 

▲=Used in ETC Generation

= Affects Rating

**- 22 -**

A184

A317

## **Umler**

### **Data Specification Manual**

### The original manufacturer selling price

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

### Range of Values for A184

Minimum	Maximum
0	9999999

#### Validation Rule for A184

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported.
- -Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost
- -Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

### NOTES:

- For railroad-marked cars, report in US dollars the original ledger value of the original owner. For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24
- The original cost is used in the settlement of AAR Interchange Rule 107 Office Manual.
- The reporting of Original Cost information is mandatory for all Railroad marked equipment and for Privately-marked equipment built or rebuilt after January 1, 2015.
- For connected unit cars report the total original cost for all units in the set.
- Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

### **Ledger Value**

Δ150

### The sum of original cost and additions & betterments

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

### Range of Values for A150

Minimum	Maximum
0	9999999

### **Validation Rule for A150**

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

### Total A&B

A003

System generated sum of all reported amounts in A&B Amount (A317), in US dollars

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

### Range of Values for A003

Minimum	Maximum
0	99999999

### Ind for Pos/Neg Total A&B

A128

A code indicating the positive or negative adjustment to the original cost of the equipment

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

### Permissible Values for A128

Negative Positive

### A&B Pos/Neg Ind

A316

A code indicating the positive or negative adjustment to the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

### Permissible Values for A316

Ρ Negative Positive

#### Validation Rule for A316

- -When entering an individual Addition & Betterment, you must enter a value
- -The A&B Indicator is required when Additions & Betterments are reported.
- -The A&B Indicator must not be reported if Additions & Betterments are not reported.

### **A&B Amount**

The amount of the individual addition and betterment added to or subtracted from the original cost of the equipment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

### Range of Values for A317

Minimum	Maximum
1	999999

#### Validation Rule for A317

-When entering an individual addition & betterment; A&B Date Done (A319), A&B Type (A318), A&B Pos/Neg Ind (A316), and A&B Amount (A317) must be reported

### NOTES:

- For railroad-marked cars, report the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not be used to report Ledger Value.
- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.
  - Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
  - Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.
- For connected unit cars report the total Truck Location A for all units in the

#### A319 **A&B Date Done**

### The date of the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-

### Range of Values for A319

Minimum	Maximum
1/1/1900	12/31/9999

### Validation Rule for A319

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -Addition and Betterment Date Done cannot be earlier than Built Date
- -Additions & Betterments Date Done cannot be later than today's date.

#### **A&B Type** A318

The type of individual addition and betterment as defined by Rule 107

Data is Confidential. Value does not carry forward for Single Clone / Multi-

### Permissible Values for A318

General - Capitalized Additions and Betterments GNRI **IHTR** In-transit heater applied to car. Includes renewal in damaged car. When installed coincidental with construction of car, the amount charged to Capital Account for such installation may be estimated. INIT Initial load of historical A&B amount as of Umler 4.6 implementation date

REFR Mechanical refrigerating systems or thermostatically controlled temperature device (including power equipment). When installed coincidental with construction or Rule 88 rebuild, the amount charged to Capital Account for such installation may be estimated.

Validation Rule for A318

\*=Conditionally Mandatory June 2025 =Mandatory ▲=Used in ETC Generation = Affects Rating **- 23 -**

### **Data Specification Manual**

- -For each equipment, only one Individual A&B Type can have a value of
- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.

## Car Management

**Pool Number** P001

Unique number used to indicate the grouping of equipment for a particular

Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add

**Pool Control** TCPC

### **Pool Control**

System Generated Field. Used for Transportation Codes. This element is not eligible for Input, Output or Query.

#### NOTES:

• For further explanation reference Appendices C and E.

**TCUR** User Routing Instructions The routing instruction reported by the user

Used for Transportation Codes.

#### Permissible Values for TCUR

- 2 Trailer Service Rule 2
- G Contaminated commodity service
- Μ Mark canceled
- 0 Owner requested return
- U Unassigned equipment

#### NOTES:

• For further explanation reference Appendix E.

### **Umler Transportation Code**

**TCOD** 

The type of assigned service, empty routing or restriction of the equipment

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

### NOTES:

• For further explanation reference Appendix E.

**Transportation Cond Code** TCCD

### The AAR or FRA interchange restriction code

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

· For further explanation reference Appendix E.

**Mechanical Restriction TCME** User reported or system generated type of mechanical restriction

Used for Transportation Codes.

### Permissible Values for TCME

- Χ **AAR Interchange Restriction**
- FRA Interchange Prohibited

### NOTES:

· For further explanation reference Appendix D.1

Mech Restriction Reason **TCMR** 

### The explanation of the Mechanical Restriction (TCME)

Used for Transportation Codes.

### **Permissible Values for TCMR**

Restricted Due to Age (Over 40-AAR, Over 50-FRA)

- Restricted Due to Air Brakes
- Restricted Due to Axles
- D **Restricted Due to Couplers and Couplers Parts**
- **Restricted Due to Couplers Yokes** F
- G Restricted Due to Draft Gears
- ı Restricted Due to Journal Bearing and Journal Lubrication
- Ν Restricted Due to Trucks
- Restricted Due to Truck Side Frames
- Т **Restricted Due to Trucks Bolsters**
- U Restricted by AAR or Owner
- W Restricted Due to Wheels
- Restricted Due to Scrap or Early Warning
- Ζ Restricted Due to Umler Conflict (Not Valid for User Input)

### NOTES:

- For further explanation reference Appendix D.2.
- The assignment of the Transportation Codes S , SX, XA, XZ and YA generate the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and mileage rate.

**Sys Gen Routing Inst TCGR** The routing instruction generated by the system

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

### NOTES:

• For further explanation reference Appendix E.5.

Loading Authority Fleet Status B597

### Identifies when a car is listed on a fleet in the Loading Authority application

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

### Permissible Values for B597

- Yes
- S Suspended

### NOTES:

- When equipment is on a fleet the Loading Authority (LA) application will update the flag to 'Y - Yes'. When equipment is removed from a fleet the LA application will remove the 'Y - Yes'.
- When equipment is on a LA fleet that is suspended the LA application will update the flag to 'S - Suspended'. When the equipment is on a LA fleet that is no longer suspended the LA application will update the flag to 'Y - Yes'.

### Train Service

**Restricted Speed Empty** 

B180

Describes the maximum restricted speed the equipment can travel when empty

Range of Values for B180 Minimum

Maximum 95

Restricted Speed Loaded

B181

Describes the maximum restricted speed the equipment can travel when loaded

Range of Values for B181

Minimum	Maximum
5	95

Permissible Values for B189

**Shove Car to Rest** B189

Identifies the car must be moved to rest by locomotive

Yes

Shove Adj. Car to Rest

B188

## **Umler**<sup>6</sup>

### **Data Specification Manual**

**B277** 

### Identifies the adjacent car must be shoved to rest by locomotive

### Permissible Values for B188

Yes

**Train Position Sensitive** B211

Indicates there is a physical reason, limiting its position on a train

### Permissible Values for B211

Yes

**End of Train Only** 

Indicates the equipment must be placed at the end of the train (including per AAR RP-2001)

#### Permissible Values for B277

Yes

Check Trailing Tonnage	B044
Indicates the equipment has restrictions on trailing tonnage	

#### Permissible Values for B044

Yes

Curve Negotiate Exception	B178
Describes the requirement for negotiating a curve	

#### Permissible Values for B178

- Restrictive Curve Negotiability, Section 2.1.4 of M-1001
- В Does not meet all Chapter XI Curving Requirements

#### Cooper Rating Exception **B273**

Describes the cooper rating (weight distribution model of the equipment), for use in movement across bridges

### Permissible Values for B273

- **Excessive Cooper Rating**
- В Cooper Rating in Excess of E66

### B275 Clearance Exception

### Describes equipment containing nonstandard dimension

### Permissible Values for B275

- Excessive Outside Extreme Height (A185) Α
- Excessive Outside Extreme Width (A186) В
- D All other unique clearance issues
- Exceeds Plate Code (A046) F at plug door top retainer

### Validation Rule for B275

- -All Box Cars built or rebuilt on or after April 1, 2016 with a Plate Code (A046) of G must report a Clearance Exception
- -Clearance Exception can only be reported when Plate Code (A046) is G

### **Loaded Net Braking Ratio**

Indicates calculated minimum loaded net braking ratio per AAR Specifications in place on built or rebuilt date (in percent).

System Generated Field. This element is not eligible for input.

### Permissible Values for B551

- -11.0
- -8.5

### NOTES:

- Loaded Net Braking Ratio is determined as follows:
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Loaded Net Braking Ratio will be set to blank.
  - o If Built Date (BLDT) is greater than or equal to 1/1/1972 and less than 1/1/2004, than loaded Net Braking Ratio is 8.5%.
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is greater than or equal to 1/1/2004, then Loaded Net Braking Ratio is 11.0%.

**Owner-Provided Loaded Net Braking Ratio** 

**B552** 

Indicates an alternate minimum loaded net braking ratio provided by owner (in percent).

### Range of Values for B552

Minimum	Maximum
8.5	14.0

- · Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net Braking Ratio (B551).
- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - o Rebuilt Date (RBDT)
  - o Gross Rail Load/Weight (A266)
  - Equipment Type Code (UMET)
  - o Empty/Load Device Eqpd (B075)

#### B553 **Empty Braking Ratio** Indicates calculated empty braking ratio per AAR Specifications in place on built

or rebuilt date (in percent). System Generated Field. This element is not eligible for input.

### Range of Values for B553

Minimum	Maximum
15.0	38.0

#### NOTES:

- Empty Braking Ratio is determined as follows;:
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Empty Braking Ratio will be set to blank.

Owner-Provided Empty Braking Ratio	B554
Indicates an owner supplied alternate empty braking ratio (in percent).	

#### Range of Values for B554 Maximum Minimum

#### 15.0 38.0

### NOTES:

- Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net Braking Ratio (B551).
- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - Rebuilt Date (RBDT)
  - o Gross Rail Load/Weight (A266)
  - Equipment Type Code (UMET)
  - o Empty/Load Device Eqpd (B075)

## Truck Components

Axle Spacing Distance Mandatory B020 The distance between axle centers on the same truck

Affects Rating.

### Permissible Values for B020

53	53 Inches
54	54 Inches
55	55 Inches
60	60 Inches
61	61 Inches
62	62 Inches
63	63 Inches

- 64 64 Inches
- 65 65 Inches
- 66 66 Inches
- 68 Inches 68

### **Data Specification Manual**

73	73 Inches
74	74 Inches
76	76 Inches
78	78 Inches
99	Ayle Space Linknov

#### 99 Axle Space Unknown

### Validation Rule for B020

- Equipment with a Built Date (BLDT) on or after January 1, 1980 cannot report Axle Space Unknown

Truck Axle Count Mandatory		B252
The number of axles per truck		•
Range of Values for B252		
Minimum	Maximum	
2	3	
Validation Ru	le for B252	

- Sum of Truck Axle Counts must equal Axle Count (A024)

Journal Size Mandatory	A147
The size of the journal bearing	•

#### Affects Rating.

### Permissible Values for A147

Α	3-3/4 X 7	В	4-1/4 X 8	C	5 X 9
D	5-1/2 X 10	Ε	6X11	F	6-1/2 X 12
G	7 X 12	K	6-1/2X9	M	7 X 9

### Validation Rule for A147

- -4-axle equipment with Journal Size B and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 103,000 lbs.
- -4-axle equipment with Journal Size C and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 142,000 lbs.
- -4-axle equipment with Journal Size D and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 177,000 lbs.
- -4-axle equipment with Journal Size E and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 220,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 263,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1 or 2, must have Gross Rail Load (A266) of 286,000 lbs.
- -4-axle equipment with Journal Size G or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 315,000 lbs.
- -4-axle equipment with Journal Size G, K, or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1, must have Gross Rail Load (A266) of 286,000 lbs.

### NOTES:

• A, B and C Journal Classes are prohibited in Interchange per Rule 90.B.4

Wheel Diameter Mandatory				A294	
The diameter of th	e wheels				•
Affects Rating.					
Permissible Values	for A29	4			
33 33 Inches	36	36 Inches	38	38 Inches	
Validation Rule for	A294				
-UnStarred Cars with Gross Weight of 286,000 lbs. and Increased Gross Rail Load of 2 must have a Wheel Diameter of either 36 or 38 inches					
-Equipment with a Qualification for Increased Gross Rail Load (B344) of 1 and Journal Size (A147) of K must have a Wheel Diameter of 36					
-Cars with an Ir	ncreased	Gross Rail Loa	d of 1 a	and Journal of G or	
have a Wh	eel Diam	eter of 38 incl	nes		
-If Connected U	Jnit Cour	nt (A020) is no	t report	ted, different Whe	el
Diameters	cannot l	oe reported			

Stability Device Equipped	B199
Indicates a stability device is present on the truck	-

#### Affects Rating.

#### Permissible Values for B199

Y Yes

Bolster Component ID	B351
Rolstor Component ID from Component Registry	

### Bolster Component ID from Component Registry

### **Validation Rule for A057**

\*=Conditionally Mandatory

- -If Rotary Coupler Style is reported, then Coupler Code must be a rotary coupler.
- -If Coupler Code is a rotary coupler, then Coupler Style must be R (Rotary).
- -Coupler Code of Type E Obsolete (Rule 16) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type E/F Obsolete (Rule 17) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type F Obsolete (Rule 18) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of FROTARY or EFROTARY cannot be reported for cars Built or Rebuilt on or after August 12, 2014.

### NOTES:

Obsolete: All Type D couplers are obsolete and should report code DOBS; cars with this coupler code will be restricted in interchange as discussed

# **Umler**<sup>6</sup>

### **Data Specification Manual**

### below.

- Unknown: If the coupler code is unknown or if the code stamped on the coupler is illegible, the code BUNK FUNK, EFUNK, or LOCOUNK should be reported.
- Special: Codes ESPEC, FSPEC, and EFSPEC have been created to decline coupler bodies that have been manufactured specifically for the equipment owner and are not listed in the attached table.
- The codes FROTARY and EFROTARY cannot be reported for equipment Built or Rebuilt since August 12, 2014.

#### **Coupler Style Mandatory B058** Describes the basic coupler design of the equipment Used in ETC Generation. Affects Rating. Permissible Values for B058

- В **Bottom Shelf** D **Double Shelf** Plain Rotary
- **Validation Rule for B058**
- -If Draft System Type (B073) is H (Hydraulic) then Coupler Style (B058) cannot be reported as M (Solid Drawbar) or L (Rotary Drawbar)
- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- -If Draft System Type (B073) of Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported

Inches of Travel	B061
The number of inches a draft system will travel	
Used in ETC Generation. Affects Rating.	
Range of Values for B061	

#### Range of Values for B061

Minimum	Maximum
1	30

### Validation Rule for B061

- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- -If Draft System Type (B073) of Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported
- -Inches of Travel cannot be greater than 20 for equipment with a Built Date (BLDT) on or after January 1, 1974

### **Draft System Type Mandatory** B073 Describes the draft gear/underframe cushion type Used in ETC Generation. Affects Rating.

- Permissible Values for B073 Cushioning at Center of Car (COC) C
  - Cushioning at End of Car (EOC)
- Ε
- Standard Draft Gear ς
- Devices with less than 6 inches buff travel Х approved under AAR Standard S-060
- Devices with 6 to 10 inches of buff travel approved under AAR Standard S-060

### Validation Rule for B073

- If Draft System Type (B073) is Standard Draft Gear (S), Inches of Travel (B061) cannot be reported
- If Draft System Type (B073) is reported as C, E, X, or Y then Inches of Travel (B061) must also be reported
- If Draft System Type (B073) of X, or Y is reported then Draft Gear Group/Cushion Unit Pocket (B562) cannot be reported
- If Draft System Type (B073) X is reported, the Inches of Travel (B061) value must be greater than or equal to 1 and less than 6
- If Draft System Type (B073) Y is reported, the Inches of Travel (B061) value must be greater than or equal to 6 and less than or equal to 10
- -If Draft System Type (B073) is E then Coupler Style (B058) cannot be
- -If Draft System Type (B073) is S then Draft Gear Group/Cushion Unit Pocket (B562) may only be A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z (AAR Rule 21)

-If Draft System Type (B073) is E then Draft Gear Group/Cushion Unit Pocket (B562) may only be EOC-1,EOC-1D, EOC-1B, EOC-2, EOC-2D, EOC-2B, EOC-3, EOC-3B,EOC-4, EOC-4B, EOC-5, EOC-5D, EOC-5B, EOC-6, EOC-6D, EOC-6B, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-8F, EOC-9, EOC-9B, EOC-9D, EOC-9E, EOC-10, EOC-10D, EOC-10B, EOC-10F, EOC-11, EOC-11D, EOC-11B, EOC-12D, EOC-12B, EOC-13B, EOC-13B, EOC-14, EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16, EOC-16D, EOC-16B, EOC-17, EOC-17D, EOC-17B, EOC-18, EOC-18D, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-23, EOC-23B, EOC-24, EOC-24B, EOC-25E, EOC-26B, EOC-26F, or EOC-27D, or EOC-27E (AAR Rule 59)

## **Unit Segment Components**

Unit Equipment Group

Describes the equipment type of the platform

Affects Rating.

### Permissible Values for A307

BOXC	Box Car	FLAT	Flat Car
GOND	Gondola	HOPP	Hopper
IFLT	Intermodal Flat	TANK	Tank Car

VFLT Vehicular Flat

### Validation Rule for A307

- -Unit Equipment Group cannot be reported if the Connected Unit Count (A020) is not reported
- -Unit Equipment Group must be reported if Connected Unit Count (A020) is reported

Unit Tare Weight A299

The unit segment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

# Minimum Maximum 40000 160000

### Validation Rule for A299

- -Unit Tare Weight must not be reported if the Connected Unit Count (A020) is not reported
- -Unit Tare Weight must be reported if Connected Unit Count (A020) is reported
- -Unit Tare Weight for Boxcars must be less than or equal 160,000 lbs.
- -Unit Tare Weight for Refrigerators must be less than or equal 140,000 lbs.
- -Unit Tare Weight for IFLTs must be greater than 10,000 lbs.
- -Unit Tare Weight for IFLTs must be less than 72,000 lbs.
- -Unit Tare Weight for all flats other than VFlats with ETC Q\_\_\_ must be greater than 23,000 lbs.
- -Unit Tare Weight for all flats other than VFlats with ETC Q\_\_\_ must be less than 500.000 lbs.
- -Unit Segment Tare Weights must add up to the Total Tare Weight (A259)
- -Unit Tare Weight (A299) value must be reported to the nearest 100 pounds

Unit Load Limit A300

The maximum permissible weight of the commodity that can be loaded into the

●=Mandatory ▲=Used in ETC Generation

### **Data Specification Manual**

### unit segment, reported in pounds

Range of Values for A300		
Minimum	Maximum	
40000	275000	

#### Validation Rule for A300

- -Unit Load Limit must not be reported if the Connected Unit Count (A020) is not reported
- -Unit Load Limit must be reported if Connected Unit Count (A020) is reported
- -Unit Segment Load Limits must add up to the Load Limit (LDLT)

Unit Cubic Feet Capacity	A065
The calculated interior dimensions of the unit segment in cubic feet	

### Range of Values for A065

Minimum	Maximum
1400	12500

### **Validation Rule for A065**

- -Unit Cubic Feet Capacity must not be reported if the Connected Unit Count (A020) is not reported
- -Unit Cubic Feet Capacity requires Connected Unit Count (A020)
- -Unit Cubic Feet Capacity for Boxcars must be greater than or equal 2000 cubic feet
- -Unit Cubic Feet Capacity for Boxcars must be less than or equal 11000 cubic feet
- -Unit Cubic Feet Capacity for Refrigerators must be greater than or equal 1400 cubic feet
- -Unit Cubic Feet Capacity for Refrigerators must be less than or equal 6700 cubic feet
- -Unit Cubic Feet Capacity must add up to the Cubic Feet Capacity (A067).

Unit Inside Length	A301
The inside length of each unit segment	

Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A301

Minimum	Maximum
39 ft 0 inches	93 ft 11 inches

### Validation Rule for A301

- -Unit Inside Length can only be reported if Connected Unit Count (A020) is reported
- -Unit Inside Length must be reported if Connected Unit Count (A020) is reported

## **Brake System Components**

Emergency Brake Valve CID	B354

### Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Emergency Valve COTS Date	B567
Brake valve emergency portion recondition date	

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

### NOTES:

Emergency Valve COTS Date is system-generated from a Emergency Brake Valve Inspection.

## **Emergency Valve OEM Warranty Date**

Brake valve emergency portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

### NOTES:

Emergency Valve OEM Date is system-generated from a Emergency Brake Valve Inspection.

### **Emergency Valve Part Number**

**B569** 

Brake valve emergency portion part number System generated element. This element is not eligible for Input. Value does not

carry forward for Single Clone / Multi-Clone.

Emergency Valve Part Number is system-generated from a Emergency Brake Valve Inspection.

#### Service Brake Valve CID **B357**

### Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

### **Service Valve COTS Date B**564

### Brake valve service portion recondition date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

Service Valve COTS Date is system-generated from a Service Brake Valve Inspection.

#### Service Valve OEM Warranty Date

**B565** 

Brake valve service portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Service Valve OEM Date is system-generated from a Service Brake Valve Inspection.

#### **Service Valve Part Number** B566 Brake valve service portion part number

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Service Valve Part Number is system-generated from a Service Brake Valve Inspection.

## **Slack Adjuster CID**

### Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

### Miscellaneous

### **Umler Effective Date**

FFDT

The date the rating activity (pre-registration, modification, etc.) is expected to

This element is not eligible for Query. Does not Carry Forward.

### Validation Rule for EFDT

-Effective Date cannot be set to more than 13 months in the future.

### NOTES:

Effective Date will default to the 1st of the following month that equipment is registered

### Inspection

### ABT Due Date (Repair Track)

**DU13** 

The due date of the air brake test per AAR Field Manual Rule 3

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

ABT 5-8 Year Due Date

The 5-8 year due date for the air brake test (ABT) after the ABT Due Date

=Mandatory ▲=Used in ETC Generation = Affects Rating

**- 30 -**

=Conditionally Mandatory

## **Umler**<sup>6</sup>

### **Data Specification Manual**

### (Repair Track)

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back

CG01 Car Grade

### The grading of the interior condition of the equipment

Value does not carry forward for Single Clone / Multi-Clone / Equipment Group

### Permissible Values for CG01

- A-Grade A Α
- В B-Grade B
- C C-Grade C
- K-Contaminated (system generated by waybill only) Κ
- L L-Grade A/B with Exceptions
- Μ M-Restraining Device missing or defective (Shipper/Receiver)
- R-Dirty Equipment (Shipper Only) R
- T-Car Certified Clean and Defect Free (Receiver Only) Т
- U U-Unfit for Lading
- Χ X-Grade A Contains Refuse
- Υ Y-Grade B Contains Refuse
- Z Z-Grade C Contains Refuse

Car Grade Inspection Date

**CG02** 

The date of the grading of the interior condition of the equipment

Value does not carry forward for Single Clone / Multi-Clone / Equipment Group Change

**Car Grade Inspection Time** 

CG03

The time of the grading of the interior condition of the equipment

Value does not carry forward for Single Clone / Multi-Clone / Equipment Group Change

**Car Grade Location SPLC** 

**CG04** 

The SPLC of the grading location

Value does not carry forward for Single Clone / Multi-Clone / Equipment Group

Car Grade Inspection SCAC

**CG05** 

The shop SCAC grading location

Value does not carry forward for Single Clone / Multi-Clone / Equipment Group Change

Insp Service Valve COTS Date

**B570** 

Brake valve service portion recondition date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

- Reports of 9999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYY

Insp Service Valve OEM Warranty Date

B571

Brake valve service portion Original Equipment Manufacturer warranty date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

- Reports of 999999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYYYY

**Insp Service Valve Part Number** 

B572

Brake valve service portion part number

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

**Inspection Date Done** 

DTDN

The date the inspection was completed; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

### Validation Rule for DTDN

- The inspection date must not be 60 days before the Build Date

**Inspection Due Date** 

INDD

The due date of the next inspection; used for all inspection types reported on

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**Inspection Performer** 

PFRF

The SCAC that completed the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

**Inspection Reporter** 

REPT

The SCAC that reported the inspection; used for all inspection types reported on

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

Location/SPLC

**SPLC** 

The SPLC of the inspecting location; used for all inspection types reported on

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

Air Brake Test Device

B523

Indicates the type of test device used to perform the Air Brake Test

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

### Permissible Values for B523

- Automatic (Non 4-Pressure)
- M Manual
- Automatic (4-Pressure)

### Validation Rule for B523

-Air Brake Test Device (B523) must be reported for Air Brake Test inspection reported on or after December 10, 2020

**Insp Emergency Valve COTS Date** 

**B573** 

Brake valve emergency portion recondition date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

- Reports of 9999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYY

Insp Emergency Valve OEM Warranty Date

B574

Brake valve emergency portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Reports of 999999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.

Valid date format: MMYYYY

Insp Emergency Valve Part Number

B575

Brake valve emergency portion part number

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

### **Data Specification Manual**

### General **USCD Status Code Mandatory** Identifies the current operational state

Does not Carry Forward.

### **Permissible Values for USCD**

ACTIVE INACTIVE 1

Ρ PRE-REGISTERED

### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-Registered.
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID	0001
The equipment stenciled number	

### Validation Rule for 0001

- -Equipment Number must not be larger than 6 digits (i.e., 999999) NOTES:
- Equipment ID includes the mark and number stenciled on the equipment. Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD999999)
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

Mechanical Designation Mandatory	UMMD
Equipment description without physical dimensions	•

Used in ETC Generation. Used for Transportation Codes.

### **Permissible Values for UMMD**

GB Gondola-Flat Bottom

**GBR** Gondola-Flat Bottom with Roof

**GBS** Gondola-Flat Bottom, Specially Equipped

Gondola-Flat Bottom with Roof, Specially Equipped **GBSR** 

GS Gondola-Drop Bottom

Gondola-Drop Bottom, Specially Equipped GSS

Gondola-High Sides and Ends-for Unloading in GT

**Dumping Machines Only** 

Gondola-High Sides and Ends, with Roof **GTR** 

**GTS** Gondola-High Sides and Ends, Specially Equipped

Gondola-Well, Specially Equipped GWS

**GWSR** Gondola-Well with Roof, Specially Equipped LG Gondola-Special Design for demountable containers

MW MoW - Miscellaneous MWD MoW - Side Dump Cars

MWGN MoW - Gondola

### **Equipment Type Code**

## An alpha numeric code that describes the physical attributes of equipment

System Generated Field. This element is not eligible for Input.

### NOTES:

Please Refer to Appendix I for More information Regarding ETC Generation

B403 **Maint of Way Service Type** Identifies equipment Maintenance Of Way function

Value does not carry forward for Equipment Group Change.

### Permissible Values for B403

C2 Crane / Boom Support Car

F4 Flat-Wheel Sets T4 **Training Car** 

T۸ Track Geometry Car

#### Validation Rule for B403

- Maint of Way Service Type can only be listed on records where the Equipment Group (0002) or Pseudo Equipment Group (B547) is listed as MISC

Built Date Mandatory	BLDT
The date the construction of the equipment is complete	•

Data is Confidential. Used for Transportation Codes. Affects Rating. Value does not carry forward for Single Clone / Multi-Clone.

### Range of Values for BLDT

Minimum	Maximum
1/1/1900	12/31/9999

### **Validation Rule for BLDT**

- -Built Date must be within the last 99 years
- -Built Date must not be in the future for equipment in Active Status
- -Prior and target equipment's Built Date (BLDT) must match for restenciling
- -Built Date cannot be updated within 30 days of the End of Service Date (B078)

#### NOTES:

- Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

Rebuilt / ILS Date	RBDT
The date the re-construction of the equipment is complete	

Data is Confidential. Value does not carry forward for Single Clone / Multi-

### Range of Values for RBDT

Minimum	Maximum
1/1/1900	12/31/9999

### Validation Rule for RBDT

- -Rebuilt/Increased Life Service Date must be after the Built Date (BLDT)
- -Rebuilt Date must not be more than 70 years after the Built Date (BLDT)
- -Rebuilt Date is required for Extended Service Code (A096) 1, 2, or 3 for Increased Life Service
- -Rebuilt Date is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years of service
- -If Rebuilt Date is reported then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life Service

### NOTES:

- Railroad cars -- applicable only to cars meeting status as provided in both STB Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office Manual.
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt Date unless car has been approved by the AAR.

**Rebuilt Flag** RBFL Identifies the equipment is nearing its end of life cycle

Data is Confidential. System Generated Field. This element is not eligible for Input.

### Permissible Values for RBFL

Ν No Υ

Primary reporting mark of the railroad or private company owning the car

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

A096

### **Data Specification Manual**

### NOTES:

Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.

Used for Transportation Codes. Affects Rating.

LESE Lessee The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### Validation Rule for LESE

- -Umler Owner (UMOW) and Lessee are not allowed to be equal
- -Lessee cannot be a child reporting mark

#### NOTES:

In order to assign privately marked cars to a pool, a railroad reporting mark must be reported.

**Maintenance Party MNPT** The parent reporting mark of the company responsible for the maintenance and

Does not Carry Forward.

repairs of the equipment

**Mark Owner Category** B201 The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change / Add Back

### Permissible Values for B201

- **US Private** В
- Canadian Private C
- Foreign Private
- Н Canadian Class II
- Canadian Class I
- J Mexican Class I
- Κ Canadian Class III
- Mexican Private Μ
- Ν **US Private Steamship**
- 0 Canadian Private Steamship
- Р Mexican Private Steamship
- Q Foreign Private Steamship
- R US Class II Railroad
- U US Class I Railroad
- ٧ US Class III Railroad
- W Mexican Class II Railroad
- Mexican Class III Railroad Υ

### NOTES:

• This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry.

**Prior Equipment ID PRID** The previous reporting mark and number of the equipment

Value does not carry forward for Single Clone / Multi-Clone.

### Validation Rule for PRID

- -Prior and target equipment's Built Date (BLDT) must match
- -The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

### NOTES:

• Prior ID enables equipment records to share the same historical lineage. Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

B122 **Last Update Date** Date of the last Umler element change

System Generated Field. This element is not eligible for Input.

B082 **Equipment Add Date** Date the reporting mark and number was added to the Umler system

System Generated Field. This element is not eligible for Input.

**Status Change Reason USCR** Identifies the reason for the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

### **Permissible Values for USCR**

- Initial Load
- М Movement
- 0 Status Changed Manually
- R Restencil

#### NOTES:

- If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

**Status Change Date USCT** Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

Extended Service Mandatory A code indicating the eligibility of an increase to the life cycle

Used for Transportation Codes. Value does not carry forward for Single Clone / Multi-Clone.

### Permissible Values for A096

- 1 1st ILS Inspection, additional 5 years of Service
- 2nd ILS Inspection, additional 5 years of service (10 years total) 2
- 3 3rd ILS Inspection, additional 5 years of service (15 years total)
- C Built New between January 1, 1964 - June 30, 1974, Certified for 50 Years of Service, Built New Before July 1, 1974 & Received AAR Waiver
- Ε Built new from July 1,1974, Qualified for 50 Years Service
- Ν Built Before January 1, 1964, Qualified for 40 Years Service
- R Rule 88. Rebuilt cars
- U Built between January 1, 1964 - June 30, 1974, Qualified for 40 Years & eligible for certification for 50 Years Service
- Car is certified (FRA Waiver & AAR) for 65 years of service from date built new from January 1, 1964

### Validation Rule for A096

- -If Rebuilt Date (RBDT) is reported, then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life
- -Extended Service Code of C cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974
- -Extended Service Code of E cannot be reported if the car was built before July 1, 1974
- -Extended Service Code of N cannot be reported if the car was built on/after January 1, 1964
- -Extended Service Code of U cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974

### NOTES:

- Value is used to calculate End of Service Date (B078).
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years service.
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) 1, 2, 3, and V for Increased Life Service.

#### **Data Specification Manual**

B078

#### **End of Service Date**

#### Indicates the date of the end of equipment life

Data is Confidential. System Generated Field. This element is not eligible for Input.

#### NOTES:

Data becomes non-confidential two years prior to End of Service Date.

#### B590 Do Not Load After Equipment should not be loaded after date shown in the element

#### Data is Confidential

#### Validation Rules for B590

- -Do Not Load After (B590) cannot be updated thirty days prior to the date shown in the element.
- -Do Not Load After (B590) cannot be updated within thirty days of the End of Service Date (B078).
- -Do Not Load After (B590) date cannot be on or after the End of Service (B078) date

#### NOTES:

- The element will be initially populated by End of Service (B078) minus 30
- Data becomes non-confidential thirty days prior to the Do Not Load After (B590) date.

#### **Equipment Identification EINN**

#### Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections.

#### **Info Conflict Status B355**

Indicates that an Informational Conflict exists on the Equipment record

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

**Conflict Status** B050

#### Identifies the escalation level of equipment in active conflict

System Generated Field. Affects Rating. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B050

- Subject to Zero-Rating 1
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

#### **Date of Original Conflict** B063

#### The date the equipment was originally placed in the current conflict

System Generated Field. This element is not eligible for Input.

#### **Next Conflict Status** Identifies the next escalation level of an equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B135

- Subject to Zero-Rating
- Subject to Restricted in Interchange 2
- Subject to Deletion

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- · Subject to Deletion, goes into effect 365 days after Conflict Status occurs

#### **Notice Indicator** B137

#### Identifies equipment in error in Umler Notice Management

System Generated Field. This element is not eligible for Input.

#### **Conflict Status Next Date** B062 The date the conflict status will be escalated

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### **Rate Indicator** A070 Indicates the rate type applicable to the unit

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for A070

- O Zero-Rated Due to Conflict Errors
- 2 Private Mileage Rate
- Private Car Owner Designated Rate 4
- Zero-Rated Scrap (S ,SX), AAR Overage (XA), FRA Overage (YA), 6 Umler Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].
- Μ Railroad Market Rate
- Zero-Rated Railroad Market Rate Due to Conflict Errors Q

#### NOTES:

• If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.

#### **Private Zero Rate B150**

Indicates a private car is subject to contractual agreement, nullifying mileage

#### Affects Rating.

#### Permissible Values for B150

Yes

#### NOTES:

• Reporting "Y" generates Rate Indicator (A070) value 6 and a zero rate.

#### **TTX Hourly Rate** B212

### Time Charge-The TTX hourly rate for the equipment

Data is Confidential. This element is not eligible for Query.

#### Range of Values for B212 Minimum Maximum

#### Validation Rule for B212

-TTX Hourly rate can only be set on TTX owned Equipment.

#### B213 **TTX Mileage Rate** Mileage Charge-The TTX mileage rate for the equipment

Data is Confidential. This element is not eligible for Query.

Range of Values for B213 Maximum Minimum

#### Validation Rule for B213

-TTX Mileage rate can only be set on TTX owned Equipment.

**First Movement Date USAT** The first movement date under the stenciled mark of the equipment

This element is not eligible for Input. Does not Carry Forward.

B135

Equipment Add Company	B083
The reporting mark of the company that added the equipment	

System Generated Field. This element is not eligible for Input.

B174 **Registration Reason** The code indicating the reason this equipment is added

Does not Carry Forward.

#### Permissible Values for B174

Add-Back New Р **Pending Restencil** R Restencil

Restencil Program Ind	B177
Identifies the equipment is under a restencil program	

#### Permissible Values for B177

Yes

Delete Reason Code	B064
A code that designates the reason the equipment has been deleted	

Value does not carry forward for Add Back.

#### Permissible Values for B064

- Restenciled
- Destroyed or wrecked D
- Lease terminated, removed from fleet
- P Retired unserviceable beyond economic repair
- R Rebuilt
- Sold Serviceable S
- W Over age retired for dismantling
- Υ Error, reporting did not exist
- 7 Other

#### **Non-Compliant Wheelsets B544**

Equipment record is incomplete and has a missing wheelset component ID association. Refer to AAR Field Manual Rule 44 for industry requirements 🌻

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for B544

- -A Wheelset Component ID is required for each applicable location on equipment built on or after January 1, 2016
- -A Wheelset Component ID is required for each applicable location on equipment rebuilt on or after January 1, 2016 and Gross Rail Load (A266) is greater than 268,000 lbs

#### NOTES:

- A "Y" will be system generated if the equipment is active and the number of Wheelset CID's required is not equal to the Axle Count (A024) on the
- Validation rule applies to equipment that has been in Active status for 60 days

#### **Pseudo Equipment Group**

Equipment needs to be identified as a miscellaneous record while maintaining all elements linked to the original equipment group

System Generated Field.

#### Permissible Values for B547

MISC Miscellaneous

Weight
--------

Gross Rail Load/Weight Mandatory

The maximum permissible weight on rail of the equipment and the load, reported in pounds

Affects Rating.

Range of Values for A266 Minimum Maximum 160000 2835000

#### Validation Rule for A266

-Gross Rail Load must be equal to the Load Limit (LDLT) plus the Tare Weight (A259)

#### NOTES:

Use Table 1 below to determine Gross Rail Load, if Qualification for Increased Gross Rail Load (B344) does not exist.

TABLE 1 -		
Journal Size	Load per Axle	Gross Rail Load for 4-
		axle Equipment
B - 4 1/2" x 8"	25,750 lbs.	103,000 lbs.
C - 5" x 9"	35,500 lbs.	142,000 lbs.
D - 5 1/2" x 10"	44,250 lbs.	177,000 lbs.
E - 6" x 11"	55,000 lbs.	220,000 lbs.
F - 6 1/2" x 12"	65,750 lbs.	263,000 lbs.
G - 7" x 12"	78,750 lbs.	315,000 lbs.
K - 6 1/2" x 9"	71,500 lbs.	263,000 lbs.
M - 7" x 9"	78,750 lbs.	315,000 lbs.

Use Table 2 below to determine Gross Rail Load for 4-axle equipment if Qualification for Increased Gross Rail Load (B344) exists.

TABLE 2 - Qualification for Increased Gross F Load (B344)	Journal Size tail	Gross Rail Load
1	K - 6 1/2" x 9"	286,000 lbs.
1	G – 7" x 12"	286,000 lbs.
1	M – 7" x 9"	286,000 lbs.
2	F - 6 1/2" x 12"	286,000 lbs.
2	K - 6 1/2" x 9"	286,000 lbs.
3	F - 6 1/2" x 12"	268,000 lbs.
3	K - 6 1/2" x 9"	268.000 lbs.

- For multi-unit equipment, report the total gross rail load for the entire set.
- Refer to Field Manual Rule 70 if additional information is required.

A Gross Rail Load less than the listed or calculated values may be entered; however:

- Star Code (A247) must be R or S, and
- · Load Limit (LDLT) must also be reduced, ensuring Tare Weight (A259) plus Load Limit (LDLT) equals the reported Gross Rail Load.

For equipment having two or more different journal sizes, see following examples:

Example for Drawbar Connected:

- A 3-unit drawbar connected car has 12 axles.
- The end units (Locations A and B) each have 4 axles with E 6" x 11" journals.
- The intermediate unit (Locations C) has 4 axles with F 6 1/2" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

8 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 440,000 lbs. + 4 ea. F-6 1/2" x 12" journal axles X 65,750 lbs. per axle = 263,000 lbs. Gross Rail Load = 703,000 lbs.

Example for Articulated Connected:

- A 5-unit articulated intermodal car has 6 trucks (12 axles).
- The end trucks (Locations A and B) each have 2 axles with E 6" x 11"
- The intermediate trucks (Locations C, D, E, and F) each have 2 axles with G - 7" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

4 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 220,000 lbs. + 8 ea. G-7" x 12" journal axles X 78,750 lbs. per axle = 630,000 lbs. Gross Rail Load = 850,000 lbs.

Tare Weight Mandatory

A259

The equipment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

#### Affects Rating.

#### Range of Values for A259

Minimum	Maximum
30000	1350000

#### Validation Rule for A259

- Tare Weight (A259) of GOND with a blank Connected Unit Count (A020), must contain values between 30,000 lbs. and 150,000 lbs.
- -Tare Weight (A259) of GOND where Connected Unit Count (A020) is 2, must contain values between 60,000 lbs. and 300,000 lbs.
- -Tare Weight (A259) of GOND where Connected Unit Count (A020) is 3, must contain values between 90.000 lbs, and 450.000 lbs.
- -Tare Weight (A259) of GOND where Connected Unit Count (A020) is 4, must contain values between 120,000 lbs. and 600,000 lbs.
- -Tare Weight (A259) of GOND where Connected Unit Count (A020) is 5, must contain values between 150,000 lbs. and 750,000 lbs.
- -Tare Weight (A259) of GOND where Connected Unit Count (A020) is 6, must contain values between 180,000 lbs. and 900,000 lbs.
- -Tare Weight (A259) of GOND where Connected Unit Count (A020) is 7, must contain values between 210,000 lbs. and 1,050,000 lbs.
- Tare Weight (A259) of GOND where Connected Unit Count (A020) is 8, must contain values between 240,000 lbs. and 1,200,000 lbs.
- -Tare Weight (A259) of GOND where Connected Unit Count (A020) is 9, must contain values between 270,000 lbs. and 1,350,000 lbs.
- Tare Weight (A259) value must be reported to the nearest 100 pounds if Weighing Date (A288).

#### NOTES:

- Do not report an average Tare Weight for car series, except for Pre-Registered cars
- When cars are made active, the actual Tare Weight must be recorded

#### **Load Limit Mandatory**

LDLT

The maximum permissible weight of the commodity that can be loaded into the equipment, reported in pounds

Used in ETC Generation. Affects Rating.

### Range of Values for LDLT

Minimum	Maximum
70000	2565000

#### Validation Rule for LDLT

- -Load Limit (LDLT) of GOND with a blank Connected Unit Count (A020), must contain values between 70,000 lbs. and 285,000 lbs.
- -Load Limit (LDLT) of GOND where Connected Unit Count (A020) is 2, must contain values between 140,000 lbs. and 570,000 lbs.
- -Load Limit (LDLT) of GOND where Connected Unit Count (A020) is 3, must contain values between 210,000 lbs. and 855,000 lbs.
- -Load Limit (LDLT) of GOND where Connected Unit Count (A020) is 4, must contain values between 280,000 lbs. and 1,140,000 lbs.
- -Load Limit (LDLT) of GOND where Connected Unit Count (A020) is 5, must contain values between 350,000 lbs. and 1,425,000 lbs.
- -Load Limit (LDLT) of GOND where Connected Unit Count (A020) is 6, must contain values between 420,000 lbs. and 1,710,000 lbs.
- -Load Limit (LDLT) of GOND where Connected Unit Count (A020) is 7, must contain values between 490,000 lbs. and 1,995,000 lbs.
- -Load Limit (LDLT) of GOND where Connected Unit Count (A020) is 8, must contain values between 560,000 lbs. and 2,280,000 lbs.
- -Load Limit (LDLT) of GOND where Connected Unit Count (A020) is 9, must contain values between 630,000 lbs. and 2,565,000 lbs.

#### NOTES:

· For connected unit cars report the sum of the load limits for all units in the set.

#### Weighing Status Mandatory

A289

Indicates the weight information is an estimate or an actual measurement

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A289

- Α Actual
- Ε **Estimated**
- Verified correct Tare Weight
- Х Tare Weight subject to verification (System Generated)

#### Validation Rule for A289

- -Equipment cannot be within a series of 10 with identical Tare Weights (A259), refer to Appendix P for further information on resolving tare weight conflicts
- -When Status Code changes to Active or Inactive Weighing Status must be reported as Actual (A) or Verified (V) within 60 days of Status Code change

#### The date the equipment was actually weighed

Value does not carry forward for Single Clone / Multi-Clone.

### Range of Values for A288

Minimum	Maximum
1/1/1900	12/31/9999

#### **Validation Rule for A288**

- -If Weighing Date is reported the Tare Weight (A259) must be reported
- -When Weighing Date is reported then Weighing Status (A289) must be A (Actual) or V (Verified)
- -If Weighing Status (A289) is A (Actual) or V (Verified correct Tare Weight) then Weighing Date must be reported
- -Weighing Date must be on or before the current date
- -Weighing Date cannot be before Built / Rebuilt date

#### **Cubic Feet Capacity Mandatory**

The maximum interior cubic feet capacity of the equipment

Used in ETC Generation.

#### Range of Values for A067

Minimum	Maximum
400	79200

#### NOTES:

- For connected unit cars report the sum of all units cubic capacity.
- Plate Codes A, B, C, E, F, G are applicable to Gondolas

**Star Code** Δ247 Indicates a reduction of the Load Limit (LDLT) of the equipment per AAR Rule 70

Affects Rating.

#### Permissible Values for A247

- Body Capacity less than Truck Capacity
- Reduced Load Limit

#### **Validation Rule for A247**

- -4-axle Cars with Star Codes of S or R must not exceed Gross Weight of 263,000 lbs. when Journal Size is A, B, C, D, or E
- -Journal Sizes having Star Code of S must have a Gross Weight that is less than the calculated Gross Weight with rounding applied
- -UnStarred 4 Axle Cars reporting Increased Gross Rail Load (IGRL) of 2 or 3 must have a Gross Weight greater than or equal to 264,000 lbs.
- -Starred 4 axle cars with IGRL of 1 must have a Wheel Size of 36 inches when Gross Weight is less than 286,000 lbs.
- -Starred 4 Axle Cars with Increased Gross Rail Load (IGRL) reported must have a Journal Size of K, G, or M

Qual for Inc GRL

AAR qualification for increased Rail Load Code designating AAR approval for operating 4-axle equipment at a gross rail load greater than 263,000 lbs per

**R344** 

#### **Data Specification Manual**

#### AAR Rule 88

#### Permissible Values for B344

- 1 Rule 88 IGRL Code 1 (> 263,000 lbs. and <= 286,000 lbs. GRL per AAR Specification S-286)
- 2 Rule 88 IGRL Code 2 (> 263,000 lbs. and <= 286,000 lbs. GRL)</p>
- 3 Rule 88 IGRL Code 3 (> 263,000 lbs. and <= 268,000 lbs. GRL)

#### Validation Rule for B344

- Equipment having Qualification for Increased Gross Rail Load of 3, and a Gross Rail Load (A266) less than 268,000 lbs, must have Star Code (A247) of S.
- -Equipment having Qualification for Increased Gross Rail Load of 1 or 2, and a Gross Rail Load (A266) less than 286,000 lbs, must have Star Code (A247) of S.
- -4-axle equipment with Gross Rail Load (A266) greater than 263,000 lbs. and less than 315,000 lbs., and Star Code (A247) blank, must report Qualification for Increased Gross Rail Load.
- -4-axle equipment having Qualification for Increased Gross Rail Load of 1, 2, or 3 must have a Wheel Diameter (A294) of 36 or 38
- -4-axle equipment having Qualification for Increased Gross Rail Load of 2 or 3 must have a Journal Size (A147) of F or K
- -4-axle equipment having Qualification for Increased Gross Rail Load of 1 must have a Journal Size (A147) of K, G, or M
- -4-axle equipment having Qualification for Increased Gross Rail Load of 3 must have Gross Rail Load (A266) that does not exceed 268,000 lbs
- -4-axle equipment having Qualification for Increased Gross Rail Load of 1 or 2 must have Gross Rail Load (A266) that does not exceed 286,000 lbs

### **Dimension**

Plate Code Mandatory

A046

Indicates the extreme height and width clearance of the equipment

Affects Rating.

#### Permissible Values for A046

- B Plate Code B
- C Plate Code C
  E Plate Code E
- F Plate Code F
- G Clearance Code G
- N Plate Code N

#### NOTES:

- For a description of Plate Codes, please see Appendix J at the back of this manual.
  - o Report B: If clearance does not exceed Plate B
  - o Report C: If clearance is greater than Plate B. but does not exceed Plate C
  - Report E: If clearance is greater than Plates B and C, but does not exceed Plate F.
  - Report F: If clearance is greater than Plates B, C and E, but does not exceed Plate F
  - o Report G: If clearance exceeds Plates B, C, E, F, and N.
  - Report N: If clearance is greater than Plates B, C, E, and F, but does not exceed Plate N.
- There is no AAR Plate G. Clearance Code G is included in Umler to represent equipment that does not fit any existing AAR clearance plates.
- For ARTICULATED/MULTI-UNIT SET report the most restrictive clearance plate of UNIT in the set.

#### Outside Length Mandatory

OSLG

The outside length over pulling faces of couplers in normal position

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for OSLG

Minimum	Maximum
28 ft 0 inches	792 ft 0 inches

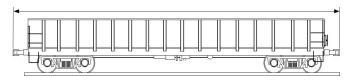

Validation Rule for OSLG

- -Outside Length on a GT ore jenny (Mechanical Designation GT, Flat Bottom, Inside Length less than 36 feet) cannot be less than 24 feet
- -Outside Length (OSLG) on freight cars must exceed the Inside Length (A135) by 2 feet or more
- Outside Length (OSLG) on freight cars (except refrigerator cars with Mechanical Designation RB, RBL, RP, RPL, or RC) must not exceed Inside Length (A135) by more than 16 feet
- -Outside Length (OSLG) of GOND with a blank Connected Unit Count (A020), must contain values between 24 feet and 88 feet
- Outside Length (OSLG) of GOND where Connected Unit Count (A020) is 2, must contain values between 48 feet and 176 feet
- Outside Length (OSLG) of GOND where Connected Unit Count (A020) is 3, must contain values between 72 feet and 264 feet
- Outside Length (OSLG) of GOND where Connected Unit Count (A020) is 4, must contain values between 96 feet and 352 feet
- Outside Length (OSLG) of GOND where Connected Unit Count (A020) is 5, must contain values between 120 feet and 440 feet
- Outside Length (OSLG) of GOND where Connected Unit Count (A020) is 6, must contain values between 144 feet and 528 feet
- Outside Length (OSLG) of GOND where Connected Unit Count (A020) is 7, must contain values between 168 feet and 616 feet
- Outside Length (OSLG) of GOND where Connected Unit Count (A020) is 8, must contain values between 192 feet and 704 feet
- -Outside Length (OSLG) of GOND where Connected Unit Count (A020) is 9, must contain values between 216 feet and 792 feet

#### NOTES

For connected unit cars report the maximum coupled length of the set.

• Round fraction to the higher inch, e.g., 05 1/4" = 06"

Outside Extreme Width Mandatory	A186
The outside extreme width of the equipment	•-

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A186

Minimum	Maximum
8 ft 5 inches	11 ft 6 inches

#### Validation Rule for A186

Outside Extreme Width must not exceed 10 feet 8 inches for Plate Codes
 B, C, E, F, or N

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"
- If equipment operates with removable cover Roof Type (A226) code 2, report dimension with cover installed.

Outside Extreme Height Mandatory	A185
Height from top of rail to extreme projecting height	•

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A185

Minimum	Maximum
4 ft 0 inches	18 ft ∩ inches

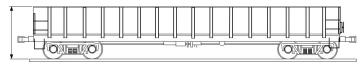

- -Outside Extreme Height for Plate Codes B must be less than or equal to 15 feet 1 inch
- -Outside Extreme Height for Plate Codes C or I must be less than or equal to 15 feet 6 inches
- Outside Extreme Height for Plate Code E must be less than or equal to 15 feet 9 inches

#### **Data Specification Manual**

- -Outside Extreme Height for Plate Code F must be less than or equal to 17 feet 0 inch
- Outside Extreme Height for Plate Code N must be less than or equal to 17 feet 1 inch

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

#### Outside Height Extr Width Mandatory

A187

The highest point at which the extreme width of the equipment occurs

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A187

Minimum	Maximum
1 ft 0 inches	18 ft 0 inches

- -Outside Extreme Width (A186) for Plate Code B must not exceed
  10 feet 8 inches if Outside Height Extreme Width is 13 feet 10
- Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 7 inches if Outside Height Extreme Width is 13 feet 11 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 0 inches
- Outside Extreme Width (A186) for Plate Code B must not exceed
   10 feet 4 inches if Outside Height Extreme Width is 14 feet 1 inches
- Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 2 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 3 inches
- Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 4 inches
- Outside Extreme Width (A186) for Plate Code B must not exceed 9 feet 9 inches if Outside Height Extreme Width is 14 feet 5 inches
- Outside Extreme Width (A186) for Plate Code B must not exceed 9 feet 5 inches if Outside Height Extreme Width is 14 feet 6 inches
- Outside Extreme Width (A186) for Plate Code B must not exceed 9 feet 2 inches if Outside Height Extreme Width is 14 feet 7 inches
- Outside Extreme Width (A186) for Plate Code B must not exceed 8 feet 10 inches if Outside Height Extreme Width is 14 feet 8 inches
- Outside Extreme Width (A186) for Plate Code B must not exceed 8 feet 6 inches if Outside Height Extreme Width is 14 feet 9 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 8 feet 3 inches if Outside Height Extreme Width is 14 feet 10 inches
- Outside Extreme Width (A186) for Plate Code B must not exceed 7 feet 11 inches if Outside Height Extreme Width is 14 feet 11 inches
- Outside Extreme Width (A186) for Plate Code B must not exceed 7 feet 6 inches if Outside Height Extreme Width is 15 feet 0 inches

- Outside Extreme Width (A186) for Plate Code B must not exceed 7 feet 4 inches if Outside Height Extreme Width is 15 feet 1 inches
- Outside Extreme Width (A186) for Plate Code C must not exceed 10 feet 8 inches if Outside Height Extreme Width is 14 feet 3 inches or less
- -Outside Extreme Width (A186) for Plate Code C must not exceed 10 feet 7 inches if Outside Height Extreme Width is 14 feet 4 inches
- Outside Extreme Width (A186) for Plate Code C must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 5 inches
- Outside Extreme Width (A186) for Plate Code C must not exceed
   10 feet 4 inches if Outside Height Extreme Width is 14 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 7 inches
- Outside Extreme Width (A186) for Plate Code C must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 8 inches
- Outside Extreme Width (A186) for Plate Code C must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 9 inches
- Outside Extreme Width (A186) for Plate Code C must not exceed 9 feet 9 inches if Outside Height Extreme Width is 14 feet 10 inches
- Outside Extreme Width (A186) for Plate Code C must not exceed 9 feet 5 inches if Outside Height Extreme Width is 14 feet 11 inches
- Outside Extreme Width (A186) for Plate Code C must not exceed 9 feet 2 inches if Outside Height Extreme Width is 15 feet 0 inches
- Outside Extreme Width (A186) for Plate Code C must not exceed 8 feet 10 inches if Outside Height Extreme Width is 15 feet 1 inches
- Outside Extreme Width (A186) for Plate Code C must not exceed 8 feet 6 inches if Outside Height Extreme Width is 15 feet 2 inches
- Outside Extreme Width (A186) for Plate Code C must not exceed 8 feet 3 inches if Outside Height Extreme Width is 15 feet 3 inches
- Outside Extreme Width (A186) for Plate Code C must not exceed 7 feet 11 inches if Outside Height Extreme Width is 15 feet 4 inches
- Outside Extreme Width (A186) for Plate Code C must not exceed 7 feet 8 inches if Outside Height Extreme Width is 15 feet 5 inches
- -Outside Extreme Width (A186) for Plate Code C must not exceed 7 feet 4 inches if Outside Height Extreme Width is 15 feet 6 inches
- Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 8 inches if Outside Height Extreme Width is 15 feet 2 inches or less
- Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 6 inches if Outside Height Extreme Width is 15 feet 3 inches
- Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 3 inches if Outside Height Extreme Width is 15 feet 4 inches
- Outside Extreme Width (A186) for Plate Code E must not exceed 9 feet 6 inches if Outside Height Extreme Width is 15 feet 5 inches
- Outside Extreme Width (A186) for Plate Code E must not exceed 8 feet 8 inches if Outside Height Extreme Width is 15 feet 6 inches

#### **Data Specification Manual**

- -Outside Extreme Width (A186) for Plate Code E must not exceed 7 feet 11 inches if Outside Height Extreme Width is 15 feet 7 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 7 feet 1 inches if Outside Height Extreme Width is 15 feet 8
- -Outside Extreme Width (A186) for Plate Code E must not exceed 6 feet 3 inches if Outside Height Extreme Width is 15 feet 9 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 8 inches if Outside Height Extreme Width is 16 feet 3
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 7 inches if Outside Height Extreme Width is between 16 feet 4 inches and 16 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 6 inches if Outside Height Extreme Width is 16 feet 7 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 3 inches if Outside Height Extreme Width is 16 feet 8 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 0 inches if Outside Height Extreme Width is 16 feet 9 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 8 inches if Outside Height Extreme Width is 16 feet 10
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 5 inches if Outside Height Extreme Width is 16 feet 11 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 2 inches if Outside Height Extreme Width is 17 feet 0
- -Outside Extreme Width (A186) for Plate Code B must not exceed 8 feet 3 inches if Outside Height Extreme Width is 14 feet 10
- -Outside Extreme Width (A186) for Plate Code C must not exceed 8 feet 3 inches if Outside Height Extreme Width is 15 feet 3 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 8 inches if Outside Height Extreme Width (A187) is 16 feet 9 inches or less
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 6 inches if Outside Height Extreme Width (A187) is 16 feet 10 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 4 inches if Outside Height Extreme Width (A187) is 16 feet 11 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 2 inches if Outside Height Extreme Width (A187) is 17
- -Outside Extreme Width (A186) for Plate Code N must not exceed 9 feet 11 inches if Outside Height Extreme Width (A187) is 17 feet 1 inch

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

**Outside Upper Eaves Width** Δ194 The width between the outside uppermost corners of the equipment

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A194

Minimum	Maximum
4 ft 0 inches	10 ft 10 inches

- -Outside Upper Eaves Width (A194) is mandatory for Gondolas built or rebuilt on or after June 18, 2020
- -Outside Upper Eaves Width must be less than or equal to the Outside Extreme Width (A186)
- -Outside Upper Eaves Width must be less than or equal to the Outside Lower Eaves Width (A190)
- -Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 8 inches if Outside Upper Eaves Height (A193) is 13 feet 10 inches or less
- -Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 8 inches if Outside Upper Eaves Height (A193) is 13 feet 10 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 7 inches if Outside Upper Eaves Height (A193) is 13 feet 11 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 6 inches if Outside Upper Eaves Height (A193) is 14 feet 0 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 4 inches if Outside Upper Eaves Height (A193) is 14 feet 1 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 3 inches if Outside Upper Eaves Height (A193) is 14 feet 2 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 2 inches if Outside Upper Eaves Height (A193) is 14 feet 3 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 10 feet 0 inches if Outside Upper Eaves Height (A193) is 14 feet 4 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 9 feet 9 inches if Outside Upper Eaves Height (A193) is 14 feet 5 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 9 feet 5 inches if Outside Upper Eaves Height (A193) is 14 feet 6 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 9 feet 2 inches if Outside Upper Eaves Height (A193) is 14 feet 7 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 8 feet 10 inches if Outside Upper Eaves Height (A193) is 14 feet 8 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 8 feet 6 inches if Outside Upper Eaves Height (A193) is 14 feet 9 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 8 feet 3 inches if Outside Upper Eaves Height (A193) is 14 feet 10 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 7 feet 11 inches if Outside Upper Eaves Height (A193) is 14 feet 11 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 7 feet 8 inches if Outside Upper Eaves Height (A193) is 15 feet 0 inches
- -Outside Upper Eaves Width for Plate Code B must not exceed 7 feet 4 inches if Outside Upper Eaves Height (A193) is 15 feet 1 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 10 feet 8 inches if Outside Upper Eaves Height (A193) is 14 feet 3 inches or
- -Outside Upper Eaves Width for Plate Code C must not exceed 10 feet 7 inches if Outside Upper Eaves Height (A193) is 14 feet 4 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 10 feet 6 inches if Outside Upper Eaves Height (A193) is 14 feet 5 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 10 feet 4 inches if Outside Upper Eaves Height (A193) is 14 feet 6 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 10 feet
- 3 inches if Outside Upper Eaves Height (A193) is 14 feet 7 inches -Outside Upper Eaves Width for Plate Code C must not exceed 10 feet
- 2 inches if Outside Upper Eaves Height (A193) is 14 feet 8 inches -Outside Upper Eaves Width for Plate Code C must not exceed 10 feet
- 0 inches if Outside Upper Eaves Height (A193) is 14 feet 9 inches -Outside Upper Eaves Width for Plate Code C must not exceed 9 feet 9 inches if Outside Upper Eaves Height (A193) is 14 feet 10 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 9 feet 5 inches if Outside Upper Eaves Height (A193) is 14 feet 11 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 9 feet 2 inches if Outside Upper Eaves Height (A193) is 15 feet 0 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 8 feet 10 inches if Outside Upper Eaves Height (A193) is 15 feet 1 inches
- -Outside Upper Eaves Width for Plate Code C must not exceed 8 feet 6 inches if Outside Upper Eaves Height (A193) is 15 feet 2 inches

#### **Data Specification Manual**

-Outside Upper Eaves Width for Plate Code C must not exceed 8 feet 3 inches if Outside Upper Eaves Height (A193) is 15 feet 3 inches -Outside Upper Eaves Width for Plate Code C must not exceed 7 feet 11 inches if Outside Upper Eaves Height (A193) is 15 feet 4 inches -Outside Upper Eaves Width for Plate Code C must not exceed 7 feet 8 inches if Outside Upper Eaves Height (A193) is 15 feet 5 inches -Outside Upper Eaves Width for Plate Code C must not exceed 7 feet 4 inches if Outside Upper Eaves Height (A193) is 15 feet 6 inches -Outside Upper Eaves Width for Plate Code E must not exceed 10 feet 8 inches if Outside Upper Eaves Height (A193) is 15 feet 2 inches -Outside Upper Eaves Width for Plate Code E must not exceed 10 feet 6 inches if Outside Upper Eaves Height (A193) is 15 feet 3 inches -Outside Upper Eaves Width for Plate Code E must not exceed 10 feet 3 inches if Outside Upper Eaves Height (A193) is 15 feet 4 inches -Outside Upper Eaves Width for Plate Code E must not exceed 9 feet 6 inches if Outside Upper Eaves Height (A193) is 15 feet 5 inches -Outside Upper Eaves Width for Plate Code E must not exceed 8 feet 8 inches if Outside Upper Eaves Height (A193) is 15 feet 6 inches -Outside Upper Eaves Width for Plate Code E must not exceed 7 feet 11 inches if Outside Upper Eaves Height (A193) is 15 feet 7 inches -Outside Upper Eaves Width for Plate Code E must not exceed 7 feet 1 inches if Outside Upper Eaves Height (A193) is 15 feet 8 inches

- Outside Upper Eaves Width for Plate Code E must not exceed 6 feet 3 inches if Outside Upper Eaves Height (A193) is 15 feet 9 inches
   Outside Upper Eaves Width for Plate Code F must not exceed 10 feet 8
- inches if Outside Upper Eaves Height (A193) is 16 feet 3 inches

  -Outside Upper Eaves Width for Plate Code F must not exceed 10 feet 7 inches if Outside Upper Eaves Height (A193) is between 16 feet 4

inches and 16 feet 6 inches

- -Outside Upper Eaves Width for Plate Code F must not exceed 10 feet 6 inches if Outside Upper Eaves Height (A193) is 16 feet 7 inches
- -Outside Upper Eaves Width for Plate Code F must not exceed 10 feet 3 inches if Outside Upper Eaves Height (A193) is 16 feet 8 inches
- -Outside Upper Eaves Width for Plate Code F must not exceed 10 feet 0 inches if Outside Upper Eaves Height (A193) is 16 feet 9 inches
- -Outside Upper Eaves Width for Plate Code F must not exceed 9 feet 8 inches if Outside Upper Eaves Height (A193) is 16 feet 10 inches
- -Outside Upper Eaves Width for Plate Code F must not exceed 9 feet 5 inches if Outside Upper Eaves Height (A193) is 16 feet 11 inches
- -Outside Upper Eaves Width for Plate Code F must not exceed 9 feet 2 inches if Outside Upper Eaves Height (A193) is 17 feet 0 inches
- -Outside Upper Eaves Width for Plate Code N must not exceed 10 feet 8 inches if Outside Upper Eaves Height (A193) is 16 feet 9 inches or less
- -Outside Upper Eaves Width for Plate Code N must not exceed 10 feet 6 inches if Outside Upper Eaves Height (A193) is 16 feet 10 inches
- -Outside Upper Eaves Width for Plate Code N must not exceed 10 feet 4 inches if Outside Upper Eaves Height (A193) is 16 feet 11 inches
- -Outside Upper Eaves Width for Plate Code N must not exceed 10 feet 2 inches if Outside Upper Eaves Height (A193) is 17 feet 0 inches
- -Outside Upper Eaves Width for Plate Code N must not exceed 9 feet 11 inches if Outside Upper Eaves Height (A193) is 17 feet 1 inch

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set
- Round fraction to the higher inch, eg., 05 1/4" = 06"

Outside Upper Eaves Hght	A193
Height from the top of rail to the uppermost outside corner of the	
equipment	

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A193

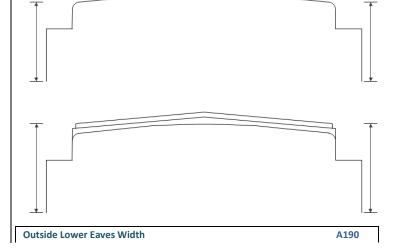

Minimum	Maximum
2 ft 0 inches	17 ft 11 inches

#### Validation Rule for A193

- Outside Upper Eaves Height must not exceed the Outside Extreme Height (A185)
- -Outside Upper Eaves Height must be greater than or equal to the Outside Lower Eaves Height (A189)
- Outside Upper Eaves Height for Plate Code B must not exceed 15 feet 1 inch
- Outside Upper Eaves Height for Plate Code C must not exceed 15 feet 6 inches
- -Outside Upper Eaves Height for Plate Code E must not exceed 15 feet 9 inches
- -Outside Upper Eaves Height for Plate Code F must not exceed 17 feet 0 inches
- -Outside Upper Eaves Height for Plate Code N must not exceed 17 feet 1 inch

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- If equipment operates with removable cover Roof Type (A226) code 2, report dimension with cover installed.

#### Width over lower eaves at sides of car (see diagram)

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A190

Minimum	Maximum
7 ft 0 inches	10 ft 10 inches

#### Validation Rule for A190

- -Outside Lower Eaves Width must not exceed the Outside Extreme Width (A186)
- -Outside Lower Eaves Width must be greater than or equal to Outside Upper Eaves Width (A194)
- -Outside Lower Eaves Width must be reported if Outside Lower Eaves Height (A189) is reported
- -Outside Lower Eaves Width must not exceed the Outside Extreme Width (A186)
- -Outside Lower Eaves Width must be greater than or equal to Outside Upper Eaves Width (A194)
- -Outside Lower Eaves Width must be reported if Outside Lower Eaves Height (A189) is reported
- -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 13 feet 10 inches or less
- -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 7 inches if Outside Lower Eaves Height (A189) is 13 feet 11 inches -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 6 inches if Outside Lower Eaves Height (A189) is 14 feet 0 inches
- -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 3 inches if Outside Lower Eaves Height (A189) is 14 feet 2 inches -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet
- 2 inches if Outside Lower Eaves Height (A189) is 14 feet 3 inches -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet
- 0 inches if Outside Lower Eaves Height (A189) is 14 feet 4 inches -Outside Lower Eaves Width for Plate Code B must not exceed 9 feet 9 inches if Outside Lower Eaves Height (A189) is 14 feet 5 inches
- -Outside Lower Eaves Width for Plate Code B must not exceed 9 feet 5 inches if Outside Lower Eaves Height (A189) is 14 feet 6 inches
- -Outside Lower Eaves Width for Plate Code B must not exceed 9 feet 2 inches if Outside Lower Eaves Height (A189) is 14 feet 7 inches -Outside Lower Eaves Width for Plate Code B must not exceed 8 feet
- 10 inches if Outside Lower Eaves Height (A189) is 14 feet 8 inches -Outside Lower Eaves Width for Plate Code B must not exceed 8 feet 3
- inches if Outside Lower Eaves Height (A189) is 14 feet 10 inches -Outside Lower Eaves Width for Plate Code B must not exceed 7 feet 11 inches if Outside Lower Eaves Height (A189) is 14 feet 11 inches -Outside Lower Eaves Width for Plate Code B must not exceed 7 feet 8
- inches if Outside Lower Eaves Height (A189) is 15 feet 0 inches -Outside Lower Eaves Width for Plate Code B must not exceed 7 feet 4 inches if Outside Lower Eaves Height (A189) is 15 feet 1 inches
- -Outside Lower Eaves Width for Plate Code C must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 14 feet 3 inches or
- -Outside Lower Eaves Width for Plate Code C must not exceed 10 feet 7 inches if Outside Lower Eaves Height (A189) is 14 feet 4 inches -Outside Lower Eaves Width for Plate Code C must not exceed 10 feet 6 inches if Outside Lower Eaves Height (A189) is 14 feet 5 inches
- -Outside Lower Eaves Width for Plate Code C must not exceed 10 feet 4 inches if Outside Lower Eaves Height (A189) is 14 feet 6 inches -Outside Lower Eaves Width for Plate Code C must not exceed 10 feet
- 3 inches if Outside Lower Eaves Height (A189) is 14 feet 7 inches -Outside Lower Eaves Width for Plate Code C must not exceed 10 feet 2 inches if Outside Lower Eaves Height (A189) is 14 feet 8 inches
- -Outside Lower Eaves Width for Plate Code C must not exceed 10 feet 0 inches if Outside Lower Eaves Height (A189) is 14 feet 9 inches -Outside Lower Eaves Width for Plate Code C must not exceed 9 feet 9
- inches if Outside Lower Eaves Height (A189) is 14 feet 10 inches -Outside Lower Eaves Width for Plate Code C must not exceed 9 feet 5
- inches if Outside Lower Eaves Height (A189) is 14 feet 11 inches -Outside Lower Eaves Width for Plate Code C must not exceed 9 feet 2
- inches if Outside Lower Eaves Height (A189) is 15 feet 0 inches -Outside Lower Eaves Width for Plate Code C must not exceed 8 feet 10 inches if Outside Lower Eaves Height (A189) is 15 feet 1 inches
- -Outside Lower Eaves Width for Plate Code C must not exceed 8 feet 6 inches if Outside Lower Eaves Height (A189) is 15 feet 2 inches -Outside Lower Eaves Width for Plate Code C must not exceed 8 feet 3
- inches if Outside Lower Eaves Height (A189) is 15 feet 3 inches
  -Outside Lower Eaves Width for Plate Code C must not exceed 7 feet 11 inches if Outside Lower Eaves Height (A189) is 15 feet 4 inches
- -Outside Lower Eaves Width for Plate Code C must not exceed 7 feet 8 inches if Outside Lower Eaves Height (A189) is 15 feet 5 inches

- -Outside Lower Eaves Width for Plate Code C must not exceed 7 feet 4 inches if Outside Lower Eaves Height (A189) is 15 feet 6 inches
- -Outside Lower Eaves Width for Plate Code E must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 15 feet 2 inches or
- -Outside Lower Eaves Width for Plate Code E must not exceed 10 feet 6 inches if Outside Lower Eaves Height (A189) is 15 feet 3 inches
- -Outside Lower Eaves Width for Plate Code E must not exceed 10 feet 3 inches if Outside Lower Eaves Height (A189) is 15 feet 4 inches
- -Outside Lower Eaves Width for Plate Code E must not exceed 9 feet 6 inches if Outside Lower Eaves Height (A189) is 15 feet 5 inches
- -Outside Lower Eaves Width for Plate Code E must not exceed 8 feet 8 inches if Outside Lower Eaves Height (A189) is 15 feet 6 inches
- -Outside Lower Eaves Width for Plate Code E must not exceed 7 feet 11 inches if Outside Lower Eaves Height (A189) is 15 feet 7 inches
- -Outside Lower Eaves Width for Plate Code E must not exceed 7 feet 1 inches if Outside Lower Eaves Height (A189) is 15 feet 8 inches
- -Outside Lower Eaves Width for Plate Code F must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 16 feet 3 inches or
- -Outside Lower Eaves Width for Plate Code F must not exceed 10 feet 7 inches if Outside Lower Eaves Height (A189) is between 16 feet 4 inches and 16 feet 6 inches
- -Outside Lower Eaves Width for Plate Code F must not exceed 10 feet 6 inches if Outside Lower Eaves Height (A189) is 16 feet 7 inches
- -Outside Lower Eaves Width for Plate Code F must not exceed 10 feet 3 inches if Outside Lower Eaves Height (A189) is 16 feet 8 inches
- -Outside Lower Eaves Width for Plate Code F must not exceed 10 feet 0 inches if Outside Lower Eaves Height (A189) is 16 feet 9 inches
- -Outside Lower Eaves Width for Plate Code F must not exceed 9 feet 8
- inches if Outside Lower Eaves Height (A189) is 16 feet 10 inches -Outside Lower Eaves Width for Plate Code F must not exceed 9 feet 5 inches if Outside Lower Eaves Height (A189) is 16 feet 11 inches
- -Outside Lower Eaves Width for Plate Code F must not exceed 9 feet 2 inches if Outside Lower Eaves Height (A189) is 17 feet 0 inches
- -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 16 feet 9 inches or
- -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 6 inches if Outside Lower Eaves Height (A189) is 16 feet 10 inches
- -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 4 inches if Outside Lower Eaves Height (A189) is 16 feet 11 inches
- -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 2 inches if Outside Lower Eaves Height (A189) is 17 feet 0 inches
- -Outside Lower Eaves Width for Plate Code N must not exceed 9 feet 11 inches if Outside Lower Eaves Height (A189) is 17 feet 1 inch

#### NOTES:

- Round fraction to the higher inch, e.g., 05 1/4" = 06"
- For connected unit cars report the dimension of the largest unit in the set.

#### **Outside Lower Eaves Hght**

A189

#### Height from top of rail to lower eaves at side of car (see diagrams)

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A189

Minimum	Maximum
8 ft 0 inches	17 ft 0 inches

#### Validation Rule for A189

- -Outside Lower Eaves Height must not exceed the Outside Extreme Height (A185)
- -Outside Lower Eaves Height for Plate Codes A, B or H must not exceed 15 feet 1 inch
- -Outside Lower Eaves Height for Plate Codes C or I must not exceed 15 feet 6 inches
- -Outside Lower Eaves Height for Plate Code E must not exceed 15 feet 9 inches
- -Outside Lower Eaves Height for Plate Code F must not exceed 17 feet 0
- -Outside Lower Eaves Height for Plate Code N must not exceed 17 feet 1 inch

#### NOTES:

**– 44 –** 

- Round fraction to the higher inch, e.g., 05 1/4" = 06"
- For connected unit cars report the dimension of the largest unit in the set.

**Inside Length Mandatory** 

A135

The inside length of the equipment from end to end inside walls, linings, and permanent bulkheads

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A135

Minimum	Maximum
21 ft 0 inches	77 ft 0 inches

#### Validation Rule for A135

- -Inside Length on an Ore Jenny (Mechanical Description GT) must be less than or equal to 35 feet 11 inches
- -Inside Length/Inside Platform Length must be less than or equal to Outside Length (OSLG)

#### NOTES:

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the shortest dimension of a unit in the set.

Inside	Width	Mandatory

A138

The inside width of the equipment from side walls and linings

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A138

Minimum	Maximum	
6 ft 0 inches	10 ft 10 inches	

#### Validation Rule for A138

-Inside Width/Inside Platform Width must not exceed Outside Extreme Width

• For connected unit cars report the shortest dimension of a unit in the set.

#### Inside Height Mandatory

The inside height of the equipment from the floor to the top of the side, or to the lowest point of the interior ceiling

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in

#### Range of Values for A133

Minimum	Maximum
1 ft () inches	15 ft 6 inches

Validation Rule for A133-Inside Height must not exceed Outside Extreme Height (A185)

#### NOTES:

- For connected unit cars report the shortest dimension of a unit in the set.
- Round fraction to the lower inch, e.g., 05 1/4" = 05

**Truck Center Length** A276

#### The length between the centers of the two truck systems

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A276

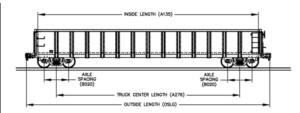

Minimum	Maximum	
17 ft 0 inches	67 ft 0 inches	

#### Validation Rule for A276

- -Truck Center Length is required if the equipment has a Built Date (BLDT) or Rebuilt Date (RBDT) that is on or after June 18, 2020
- -Truck Center Length is required for cars with an Outside Length (OSLG) of greater than 62 feet 6 inches

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

**Bulkhead Top Width** 

**B038** 

#### Describes the width of the bulkhead

Value does not carry forward for Equipment Group Change. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for B038

Minimum	Maximum
8 ft 0 inches	11 ft 7 inches

**Bulkhd Height Abov Pltfrm** 

B035

#### Describes the height of the bulkhead

Value does not carry forward for Equipment Group Change. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for B035

Minimum	Maximum
8 ft 0 inches	11 ft 8 inches

#### Door

**End Door Width** A082

The width of the end door opening in inches

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A082

Minimum	Maximum	
1 ft 0 inches	10 ft 6 inches	

#### **Validation Rule for A082**

-End Door Width must be reported for Drop-End Gondolas (Mechanical Designation of GB; Gondola End Door must be Drop End)

#### NOTES:

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the dimension of the smallest end door width of a unit in the set.

**End Door Height** 

A080

#### The height of the end door opening in inches

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A080

Minimum	Maximum	
1 ft 0 inches	10 ft 11 inches	

#### Validation Rule for A080

- -End Door Height must be reported when Gondola With Drop Ends (B103)
- -End Door Height must not be reported if End Door Width (A082) is not reported
- -End Door Height must be reported if End Door Width (A082) is reported

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the dimension of the smallest end door height of a unit in the set.

**Gondola With Drop Ends** 

B103

Indicates the equipment has drop end doors

Used in ETC Generation.

Permissible Values for B103

A030

#### **Data Specification Manual**

Yes

### **Specification**

**Truck Count B256** 

The total number of trucks on the equipment

System Generated Field. This element is not eligible for Input.

#### Range of Values for B256

Minimum	Maximum	
2	6	

Axle Count Mandatory

A024

The total number of axles on the equipment

Affects Rating.

### Range of Values for A024 Minimum Maximum

4 36

#### **Validation Rule for A024**

- -Axle Count must be greater than or equal to 4
- -Axle Count for an articulated car must be greater than or equal to ((Connected Unit Count (A020) x 2) + 2)
- -Axle Count for a draw bar connected car must be greater than or equal to (Connected Unit Count (A020) x 4)
- -Total Axle Count must match sum of truck axle counts

#### Wheel Bearing Type Mandatory

R191

Indicates the wheel bearing journal design for the equipment

Affects Rating.

#### Permissible Values for B191

Plain R Roller

#### Validation Rule for B191

- -Cars with Plain Bearings will have a Transportation Code (TCOD) and Transportation Condition Code (TCCD) of either YA, S, SX, or XJ
- -Equipment cannot have Plain Bearings if Built Date (BLDT) is on or after January 1, 1993

#### **Bearing Shielded From HBD**

B021

Indicates the wheel bearings are shielded from wayside hot box detectors

#### Permissible Values for B021

Yes

#### **Brake Shoe Type Mandatory**

B026

Indicates the type of brake shoe on the equipment

#### Permissible Values for B026

- C **Tread Conditioning**
- Н **High Friction Composite**
- Low Friction Composite/Cast Iron L

#### **CC Side Bearing Type**

A146

Indicates the travel range of the constant contact side bearings installed on the equipment

#### Permissible Values for A146

- LC Long Travel Constant Contact
- SC **Short Travel Constant Contact**

#### Validation Rule for A146

-Equipment having Qualification for Increased Gross Rail Load (B344) of 1 must have Constant Contact Side Bearing Type of LC

#### Empty/Load Device Eqpd

B075

Indicates that the air brake system includes a device to determine if the equipment is empty or loaded, and then varies the braking forces accordingly

Permissible Values for B075

Yes

**Body Material** 

The material that composes the body of the equipment

#### Permissible Values for A030

High Strength Steel (Over 100ksi Yield 00

Strength)

01 Aluminum

04 Combination

18 Stainless Steel

19 Standard Steel

30 Wood

**Center Of Gravity Empty** 

A045

When empty, indicates the height from Top of Rail to the Center of Gravity

Affects Rating.

#### Range of Values for A045

Minimum	Maximum	
31	70	

#### **Validation Rule for A045**

- -All cars that exceed Plate Code (A046) C must report Center of Gravity Empty except for cars with Equipment Type Code (UMET) of J\_\_\_
- -All Gondolas with an Equipment Type Code (UMET) of E\_\_\_ or G\_\_\_ must report Center of Gravity Empty
- -Center of Gravity Empty must be reported with the Mechanical Designation (UMMD) of LG, MWD, or MW

**Remote Monitoring Device** 

B176

Indicates the equipment has a device that transmits a signal or records data

#### Permissible Values for B176

Yes

N Nο

• Per AAR S-2045, This may be data related to ride quality, geographic location, temperature/condition of the load, load/empty status, etc.

**AEI High Temperature Tag** 

**B006** 

Indicates the equipment is equipped with a high temperature AEI tag

### Permissible Values for B006

High Temperature Tag

Floor Cradle/Trough Eqpd

A103

Indicates the equipment has a floor cradle or trough

#### Permissible Values for A103

Yes

#### Validation Rule for A103

- -Steel Coil Aluminum Loading must not be reported, if the Floor Cradle/Trough Orientation and Floor Cradle/Trough Equipped are not reported
- -Floor Cradle/Trough Orientation (B093) must be reported, if the Floor Cradle/Trough Equipped (A103) is reported

Floor Cradle/Trough Orien

B093

Indicates the direction of the floor cradle or trough in relationship to the equipment body

Used in ETC Generation.

#### Permissible Values for B093

Longitudinal Transverse

#### Validation Rule for B093

-Floor Cradle/Trough Orientation (B093) must be reported, if the Floor Cradle/Trough Equipped (A103) is reported

= Affects Rating

**- 46 -**

=Conditionally Mandatory

#### **Data Specification Manual**

-Floor Cradle/Trough Orientation used for Mechanical Designation (UMMD) of GBS or GBSR

Coil Steel/Alum. Loading

**B132** 

Indicates the equipment is designed to carry coils of steel or aluminum

Used in ETC Generation.

Permissible Values for B132

Yes

**Light Density** 

**B124** 

Indicates the equipment is designed to carry low density commodities such as wood chips and similar products

Used in ETC Generation.

#### Permissible Values for B124

Yes

#### Validation Rule for B124

-Gondolas with Light Density applies only to Mechanical Designations (UMMD) of GTS, GTR, GBR, GBS, GBSR, GSS, GWS, GWSR, MWD, LG, or MW

**Connected Unit Count** 

A020

Indicates the number of units within an articulated or multi-unit equipment

Affects Rating.

#### Range of Values for A020

Minimum	Maximum	
2	9	

#### Validation Rule for A020

- -Connected Unit Count must equal the number of Unit Segments
- -Unit Segment Component elements must not be reported if the Connected Unit Count is not reported
- -Unit Segment Component elements must be reported if Connected Unit Count is reported

**Intermediate Conn Style** 

**B115** 

Indicates the method by which two or more pieces of equipment are connected

#### Permissible Values for B115

- Α Articulated Connector
- **Drawbar Connector**

#### Validation Rule for B115

- -Intermediate Connector Style is required for multi-unit equipment
- -Intermediate Connector Style must not be reported for single unit equipment

#### **Operating Brakes Mandatory**

A182

The number of air brake control valves on the equipment (excludes hand brakes). One control valve consists of a service portion, emergency portion, and pipe bracket. Example: DB-60 control valve

#### Permissible Values for A182

1	2	3	4	5
6	7	8	9	

#### Validation Rule for A182

- -Operating Brakes must be reported for all equipment
- -Operating Brakes (A182) must be 1 for non-articulated equipment with an Axle Count (A024) equal to 4

• Excludes empty/load device, number 8 vent valve, and proportion valve.

ECP Brake Type	B327
Indicates the type of electronic controlled pneumatic brake used on the	
equipment	

#### Permissible Values for B327

- Not Equipped
- Overlay Both ECP & Air Brake
- Stand Alone ECP Only

#### Validation Rule for B327

-Equipment must have a value entered for ECP Brake Type if built or rebuilt after June 28, 2012

#### **ECP Brake Builder**

**B328** 

The manufacturer of the electronic controlled pneumatic brake used on the equipment

#### Permissible Values for B328

NYAB New York Air Brake

WABT WABTEC

#### Validation Rule for B328

- -If ECP Brake Type (B327) is Stand Alone or Overlay then a value must be entered for ECP Brake Builder
- -If ECP Brake Type (B327) is Not Equipped then ECP Brake Builder is not reportable

#### Slack Adjuster Group

B538

The slack adjuster group on the equipment per AAR Field Manual Rule #8

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B538

Α	Group A	В	Group B	С	Group C	D	Group D
Ε	Group E	F	Group F	G	Group G	Н	Group H
J	Group J	L	Group L	M	Group M	Ν	Group N
0	Group O	Р	Group P	Q	Group Q	R	Group R
1	Internal	2	Unequinned				

#### Validation Rule for B538

- Slack Adjuster Group is mandatory for all equipment built or rebuilt on or after January 1, 2016
- If Slack Adjuster Group is reported as "1" then Brake Cylinder Mount Type (B540) must be reported as "T"
- If Slack Adjuster Group is "1" or "2", then Slack Adjuster CID (B359) must not be reported.

#### NOTES:

• Permissible value of "1 - Internal" identifies special truck mounted internal slack adjuster within brake cylinder.

#### **Brake Cylinder Mount Type**

**B540** 

Identifies the location of the brake cylinder

#### Permissible Values for B540

R **Body Mounted** 

#### Truck Mounted Validation Rule for B540

- Brake Cylinder Mount Type is mandatory for all equipment built or rebuilt on or after January 1, 2016

#### **Equipment Builder**

A035

Identifies the original manufacturer of the equipment

#### Permissible Values for A035 ACFX ACE Industrias

V OWNER RAURO

V OWNER RAILROAD VERM Vertex

#### **Validation Rule for A035**

- -Equipment Builder must be populated if the Built Date (BLDT) is July 1, 2010 or newer
- -Equipment built or rebuilt on or after July 1, 2010 cannot have a Equipment Builder of Unknown
- -Equipment with a Built Date (BLDT) on or after July 1, 2010 cannot have an Equipment Builder Code of OWNER RAILROAD.
- -Equipment Builder can have a value of MULT only if the equipment has multiple units.

#### **Builder Lot Code**

B030

A unique identifier for a group of equipment built by one manufacturer under the same builder specification

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for B030

-Equipment built or rebuilt on or after June 28, 2012 must have a value for Builder Lot Code

**Built Country** 

B031

The country where the equipment was constructed

Data is Confidential.

#### Permissible Values for B031

CA Canada MX Mexico

US United States

**Rebuilt Country** 

B170

The country where the equipment was re-constructed

#### Permissible Values for B170

CA Canada MX Mexico

US United States

FRA Reflectorization B096

Indicates the equipment owner assumes responsibility for applying reflectorization tape

#### Permissible Values for B096

P Reflectorization PlanW Reflectorization Waiver

#### Validation Rule for B096

-Reflectorization is mandatory for all equipment after November 28, 2015.

Bottom Outlet Count B142

The number of bottom outlets or washouts on the equipment

Range of Values for R1/12

Mange of Values for D142		
Minimum	Maximum	
0	9	

Air Hose Arrangement B524
The type of trainline air hose arrangement

#### Permissible Values for B524

- A S-424 Angle Cock Location
- B S-425 Angle Cock Location on Cars Equipped with AAR Type F Coupler
- C S-426 Angle Cock Location on Cars with Floating Sills
- S-427 Angle Cock and Air Brake Hose Location on Cars with Excessive
   Overhang Preventing Compliance with AAR Standards
- E S-428 Angle Cock Location on Cars Equipped with AAR Type F Coupler and Cushioned Underframe
- F S-4003 (Former Standard)
- G S-4003x (Former Standard Retrofitted to Meet All Dimensions Except Height)
- H S-4003-05 (Current Standard Train Line Arrangement for Cars with F-Shank Couplers)
- I S-4021 Angle Cock and Brake Hose Location on Cars with EOCC (E and F)
- J S-4021 Coupler Mounted Bracket End Arrangement
- K S-4028 Train Line Arrangement with Displaceable Union on Cars with EOCC and Couplers Not Exceeding 45 in. in Length
- L S-4029 Train Line Arrangement with Displaceable Union on Cars with EOCC and Couplers Exceeding 45 in. in Length
- M S-4030 Trolley Arrangement on Cars with EOCC and E-Shank Couplers

#### Validation Rule for B524

-Air Hose Arrangement must be reported for this equipment if it is Built or Rebuilt on or after April 22, 2014.

#### NOTES:

- If any of the following conditions apply, Air Hose Arrangement (B524) must be reported for cars Built or Rebuilt on or after April 22, 2014:
  - ° Draft Gear Type (B073) at any location is C or E.
  - ° Connected Unit Count (A020) is reported.
  - ° Outside Length (OSLG) is greater than or equal to 70 feet (840 inches).
  - The overhang is greater than 5 feet 6 inches (66 inches). Overhang is calculated as follows:
  - 0.5 \* (Outside Length, in inches, minus Truck Center Length, in inches, minus 31 inches)
    - For all other equipment, reporting Air Hose Arrangement is optional.

### 4-Pressure ABT Receiver Eqpd

B539

Identifies if the equipment is equipped with a 4-pressure air brake test receiver

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B539

E Equipped

N Not Equipped

#### NOTES:

 An "E" will be system generated if a 4-Pressure ABT is reported on the equipment.

#### **Feature**

Floor Material

A104

Describes the type of construction material used for the equipment floor

Used in ETC Generation.

#### Permissible Values for A104

- 00 High Strength Steel (Over 100ksi Yield Strength)
- 01 Aluminum
- 05 Composite Nailable (considered same as wood

=Mandatory

#### **Data Specification Manual**

- 14 Other
- 15 Other, Reinforced
- 19 Standard Steel
- 23 Steel Nailable (includes alternate wood and steel floor
- 24 Steel Nailable, Reinforced (includes alternate wood and steel floor
- 25 Standard Steel, Reinforced
- 30 Wood
- 33 Wood, Double, Reinforced
- 34 Wood Floor with Steel Protective Plates (includes perforated steel)
- 35 Wood Floor, Reinforced, with Steel Protective Plates (includes perforated steel)
- 36 Wood Floor, Reinforced

#### Validation Rule for A104

 Equipment Built or Rebuilt on or after January 1, 2000 cannot have a value of Other, or Other, Reinforced

### Gondola Floor Design

B094

Describes the equipment floor design

### Used in ETC Generation. Permissible Values for B094

D Depressed Bottom F Flat Bottom

#### NOTES:

Gondola Floor Design must be reported if Mechanical Designation (UMMD) is

#### **Wood Racks Covering Floor**

B233

#### Reinforcement of the equipment floor using wood racks

#### Permissible Values for B233

Y Yes

#### **Lining Material**

A158

#### Describes the type of construction material used in the lining of equipment

#### Permissible Values for A158

- 17 Sheet Metal
- 26 Synthetic
- 28 Unlined
- 30 Wood

#### **Bulkhead Type**

B034

#### Identifies the type of bulkhead attached to the equipment

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B034

F Fixed

#### Validation Rule for B034

 -Gondola Bulkhead Types are only applicable for Mechanical Designation (UMMD) of GTS, GTR, GBR, GBS, GBSR, GSS, GWS, GWSR, LG, MWD, or MW

#### **Removable Cover Equipped**

B060

#### Indicates the equipment is equipped with a removable cover

#### Permissible Values for B060

' Yes

#### Validation Rule for B060

-Removable Cover Equipped is not applicable to Gondolas with Mechanical Designation (UMMD) of GB or GS

#### **Lading Strap Anchor Eqpd**

B121

Indicates the equipment has fixed devices or design features which provide connection points for straps or bands securing the lading

#### Permissible Values for B121

Y Yes

#### Validation Rule for B121

 -Lading Strap Anchor Locations are not applicable to Gondolas with the Mechanical Designation (UMMD) of GT

#### Tie Down Assembly Non-FA

B271

Identifies equipment having a tie down assembly, for a non flat car

#### Permissible Values for B271

Y Yes

#### Validation Rule for B271

-Tie Down Assembly Non-FA Equipped is not applicable to Gondolas with Mechanical Designations (UMMD) of GB, GS, or GT

#### **Cross Bar Equipped**

B268

Identifies the equipment has a cross bar for securing the load

#### Permissible Values for B268

Y Yes

#### Validation Rule for B268

-Cross Bar Equipped (B268) only applies to Mechanical Designation (UMMD) of GBS or GBSR

#### **Cross Bar Count**

B592

The number of coil load divider bars (cross bars) that is standard to a specially equipped gondola

#### Range of Values for B592

Minimum	Maximum	
1	9	

#### Validation Rule for B592

-Cross Bar Count (B592) must be reported, if Cross Bar Equipped (B268) is Y-Yes

 -Cross Bar Count only applies to Mechanical Designation (UMMD) of GBS or GBSR

#### Roof Type

A226

Describes the type of roof or hatches on the equipment

#### Permissible Values for A226

- 1 Trough hatch in roof
- 2 Removable roof
- Other types of roof openings

#### Validation Rule for A226

- -Trough Hatch Roofs are only applicable to Gondolas and Hoppers with Mechanical Designation (UMMD) of GBR, GBSR, GWSR, HKR, HMSR, HTR, or LO
- -Removable Roofs are only applicable to Gondolas with Mechanical Designation (UMMD) of GBR, GBSR, GWSR, or GTR
- -Round Roof Hatches at centerline of cars are only applicable to Boxcars,
  Gondolas, or Covered Hoppers with Mechanical Designation (UMMD)
  of XP\_GTR\_or\_LO
- Other types of Roofs are only applicable to Hoppers, or Specialized Gondolas with Roofs with Mechanical Designation (UMMD) of LO, HTR. or GTR
- -Mechanical Designations (UMMD) of GBR, GBSR, GWSR, GTR, HKR, HMSR, HTR, or LO require that Roof Type be set

#### **Clean Out Door Equipped**

B600

Indicates the equipment is equipped with a clean out door

#### Permissible Values for B600

Y Yes

### Number of Troughs

B601

The total number of troughs on the equipment

Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for B601

Minimum	Maximum	
2	10	

#### Validation Rule for B601

 Number of Troughs can only be reported if Floor Cradle/Trough Orientation (B093) is T

# Cost Original Cost A184 The original manufacturer selling price

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A184

Minimum	Maximum	
0	9999999	

#### Validation Rule for A184

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported.
- -Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost
- -Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

#### NOTES:

- Original Cost is never altered. It is the cost of the equipment to the original owner.
- For railroad-marked cars, report in US dollars the original ledger value of the original owner For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24
- The original cost is used in the settlement of AAR Interchange Rule 107 Office Manual.
- For connected unit cars report the total original cost for all units in the set.
- Numeric, applicable to all railroad-marked cars Also, applicable to privately marked covered hopper (LO) cars.
- Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

Ledger Value	A150
The sum of original cost and additions & betterments	

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

Range of Values for A150		
Minimum	Maximum	
0	9999999	

#### Validation Rule for A150

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

Total A&B A003

System generated sum of all reported amounts in A&B Amount (A317), in US

dollars

Data is Confidential. System Generated Field. This element is not eligible for

### Input. Value does not carry forward for Single Clone / Multi-Clone. Range of Values for A003

Minimum	Maximum
0	99999999

#### NOTES:

**For railroad-marked cars, report** the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not be used to report Ledger Value.

- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.
  - Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
  - Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.

 For connected unit cars report the total Truck Location A for all units in the set

#### Ind for Pos/Neg Total A&B

A128

A code indicating the positive or negative adjustment to the original cost of the equipment

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A128

N Negative

Positive

#### A&B Pos/Neg Ind

A316

A code indicating the positive or negative adjustment to the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A316

N Negative P Positive

#### Validation Rule for A316

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -The A&B Indicator is required when Additions & Betterments are reported.
- -The A&B Indicator must not be reported if Additions & Betterments are not reported.

#### A&B Amount A317

The amount of the individual addition and betterment added to or subtracted from the original cost of the equipment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A317

Minimum	Maximum		
1	999999		

#### Validation Rule for A317

-When entering an individual addition & betterment; A&B Date Done (A319), A&B Type (A318), A&B Pos/Neg Ind (A316), and A&B Amount (A317) must be reported

A&B Date Done A319

#### The date of the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A319

Minimum	Maximum		
1/1/1900	12/31/9999		

#### Validation Rule for A319

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -Addition and Betterment Date Done cannot be earlier than Built Date (BLDT).
- -Additions & Betterments Date Done cannot be later than today's date.

A&B Type A318

The type of individual addition and betterment as defined by Rule 107

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Permissible Values for A318

GNRL General - Capitalized Additions and Betterments

INIT Initial load of historical A&B amount as of Umler 4.6 implementation date

#### Validation Rule for A318

-For each equipment, only one Individual A&B Type can have a value of INIT.

●=Mandatory ▲=Used in ETC Generation

#### **Data Specification Manual**

-When entering an individual Addition & Betterment, you must enter a value in all 4 fields.

### Car Management

**Pool Number** P001

Unique number used to indicate the grouping of equipment for a particular purpose

Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add

**Pool Control** TCPC **Pool Control** 

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input, Output or Query.

• For further explanation reference Appendices C and E.

**User Routing Instructions TCUR** The routing instruction reported by the user

Used for Transportation Codes.

#### **Permissible Values for TCUR**

- 2 Trailer Service Rule 2
- G Contaminated commodity service
- Μ Mark canceled
- 0 Owner requested return
- U Unassigned equipment

#### NOTES:

For further explanation reference Appendix E.

TCOD **Umler Transportation Code** The type of assigned service, empty routing or restriction of the equipment

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

For further explanation reference Appendix E.

**Transportation Cond Code TCCD** The AAR or FRA interchange restriction code

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

· For further explanation reference Appendix E.

**Mechanical Restriction TCME** 

User reported or system generated type of mechanical restriction Used for Transportation Codes.

#### Permissible Values for TCME

- S Scrap
- Х **AAR Interchange Restriction**
- FRA Interchange Prohibited

#### NOTES:

· For further explanation reference Appendix D.1

**Mech Restriction Reason TCMR** The explanation of the Mechanical Restriction (TCME)

Used for Transportation Codes.

#### **Permissible Values for TCMR**

- Restricted Due to Age (Over 40-AAR, Over 50-FRA) Α
- В Restricted Due to Air Brakes
- C Restricted Due to Axles
- D **Restricted Due to Couplers and Couplers Parts**

- **Restricted Due to Couplers Yokes**
- Restricted Due to Draft Gears G
- ı Restricted Due to Journal Bearing and Journal Lubrication
- Restricted Due to Trucks Ν
- Restricted Due to Truck Side Frames Ρ
- Т Restricted Due to Trucks Bolsters
- U Restricted by AAR or Owner
- W Restricted Due to Wheels Х Restricted Due to Scrap or Early Warning
- 7 Restricted Due to Umler Conflict (Not Valid for User Input)

#### NOTES:

- For further explanation reference Appendix D.2.
- The assignment of the Transportation Codes S , SX, XA, XZ and YA generate the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and mileage rate.

**Sys Gen Routing Inst TCGR** 

The routing instruction generated by the system

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

For further explanation reference Appendix E.5.

Loading Authority Fleet Status B597

Identifies when a car is listed on a fleet in the Loading Authority application

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B597

- S Suspended

#### NOTES:

- When equipment is on a fleet the Loading Authority (LA) application will update the flag to 'Y - Yes'. When equipment is removed from a fleet the LA application will remove the 'Y - Yes'.
- When equipment is on a LA fleet that is suspended the LA application will update the flag to 'S – Suspended'. When the equipment is on a LA fleet that is no longer suspended the LA application will update the flag to 'Y - Yes'.

#### Train Service

**Restricted Speed Empty** 

Describes the maximum restricted speed the equipment can travel when empty

Range of Values for B180

Minimum	Maximum
5	95

**Restricted Speed Loaded** 

R129

Describes the maximum restricted speed the equipment can travel when loaded

Range of Values for B181

Minimum	Maximum
5	95

**Shove Car to Rest** Identifies the car must be moved to rest by locomotive

Permissible Values for B189

Yes

Shove Adj. Car to Rest **B188** Identifies the adjacent car must be shoved to rest by locomotive

Permissible Values for B188

Yes

=Mandatory ▲=Used in ETC Generation

#### **Data Specification Manual**

Train Position Sensitive	B211
Indicates there is a physical reason, limiting its position on a train	

#### Permissible Values for B211

Yes

**End of Train Only B277** Indicates the equipment must be placed at the end of the train (including per AAR RP-2001)

#### Permissible Values for B277

Yes

Check Trailing Tonnage	B044
Indicates the equipment has restrictions on trailing tonnage	

#### Permissible Values for B044

Yes

Curve Negotiate Exception	B178
Describes the requirement for negotiating a curve	

#### Permissible Values for B178

- Restrictive Curve Negotiability, Section 2.1.4 of M-1001
- Does not meet all Chapter XI Curving Requirements

Cooper Rating Exception	B273
Describes the cooper rating (weight distribution model of t use in movement across bridges	he equipment), for
Permissible Values for B273	

- **Excessive Cooper Rating**
- Cooper Rating in Excess of E66

Clearance Exception	B275
Describes equipment containing nonstandard dimension	

#### Permissible Values for B275

- Excessive Outside Extreme Height (A185)
- В Excessive Outside Extreme Width (A186)
- D All other unique clearance issues

Loaded Net Braking Ratio	B551
Indicates calculated minimum loaded net braking ratio per AAR Specifi	cations in
place on built or rebuilt date (in percent).	
System Generated Field. This element is not eligible for input.	

### Permissible Values for B551

- -11.0
- -8.5

#### NOTES:

- · Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net Braking Ratio (B551).
- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - o Rebuilt Date (RBDT)
  - Gross Rail Load/Weight (A266)
  - o Equipment Type Code (UMET)
  - o Empty/Load Device Eqpd (B075)

Empty Braking Ratio	B553
Indicates calculated empty braking ratio per AAR Specifications in place	e on built
or rebuilt date (in percent).	
System Generated Field. This element is not eligible for input.	

#### Range of Values for B553

Minimum	Maximum
15.0	38.0

#### NOTES:

- Empty Braking Ratio is determined as follows;:
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Empty Braking Ratio will be set to blank.

Owner-Provided Empty Braking Ratio	B554
Indicates an owner supplied alternate empty braking ratio (in percent)	

#### Range of Values for B554

Minimum	Maximum
15.0	38.0

#### NOTES:

- Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net Braking Ratio (B551).
- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - o Rebuilt Date (RBDT)
  - o Gross Rail Load/Weight (A266)
  - Equipment Type Code (UMET)
- o Empty/Load Device Eqpd (B075)

Truck Components	
Axle Spacing Distance Mandatory	B020
The distance between axle centers on the same truck	•

#### The distanc Affects Rating.

#### Permissible Values for B020

53	53 Inches
54	54 Inches
55	55 Inches
60	60 Inches

61	61 inches
62	62 Inches

03	os inches

71 71 Inches 72

72 Inches 73 73 Inches

74 74 Inches

76 76 Inches

78 78 Inches

Axle Space Unknown

Truck Axle Count <i>Mandatory</i>	B252
The number of axles per truck	•

#### Range of Values for B252 Minimum Maximum

## 2

#### Validation Rule for B252

- Sum of Truck Axle Counts must equal Axle Count (A024)

Journal Size Mandatory	A147
The size of the journal bearing	<b>●</b>

#### Affects Rating.

**- 52 -**

#### Permissible Values for A147

Α	3-3/4 X 7	В	4-1/4 X 8	C	5 X 9
D	5-1/2 X 10	Ε	6X11	F	6-1/2 X 12

#### G 7 X 12 K 6-1/2X 9 M 7 X 9

#### Validation Rule for A147

- -4-axle equipment with Journal Size B and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 103,000 lbs.
- -4-axle equipment with Journal Size C and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 142,000 lbs.
- -4-axle equipment with Journal Size D and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 177,000 lbs.
- -4-axle equipment with Journal Size E and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 220,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 263,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1 or 2, must have Gross Rail Load (A266) of 286,000 lbs.
- -4-axle equipment with Journal Size G or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 315,000 lbs.
- -4-axle equipment with Journal Size G, K, or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1, must have Gross Rail Load (A266) of 286,000 lbs.

#### NOTES:

• A, B and C Journal Classes are prohibited in Interchange per Rule 90.B.4

Wheel Diameter Mandatory	A294
The diameter of the wheels	•-

#### Affects Rating.

#### Permissible Values for A294

33 33 Inches 36 36 Inches

38 38 Inches

#### Validation Rule for A294

- -Equipment with Qualification for Increased Gross Rail Load (B344) of 1, and Journal Size (A147) of G or M, must have Wheel Diameter of 38
- -Equipment with Qualification for Increased Gross Rail Load (B344) of 1, and Journal Size (A147) of K, must have Wheel Diameter of 36
- -If Connected Unit Count (A020) is not reported, different Wheel Diameters cannot be reported

Stability Device Equipped	B199
Indicates a stability device is present on the truck	

#### Affects Rating.

#### Permissible Values for B199

Y Yes

## Bolster Component ID B351 Bolster Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

## Side Frame Component ID B352 Side Frame Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

## Wheelset Component ID B350 Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Draft System Components	
Coupler Code	A057
Defines the equipment coupler type	

#### Permissible Values for A057

#### Validation Rule for A057

- -If Rotary Coupler Style is reported, then Coupler Code must be a rotary coupler.
- -If Coupler Code is a rotary coupler, then Coupler Style must be R (Rotary).
   -Coupler Code of Type E Obsolete (Rule 16) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type E/F Obsolete (Rule 17) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type F Obsolete (Rule 18) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of FROTARY or EFROTARY cannot be reported for cars Built or Rebuilt on or after August 12, 2014.

#### NOTES:

- Obsolete: All Type D couplers are obsolete and should report code DOBS; cars with this coupler code will be restricted in interchange as discussed below.
- Unknown: If the coupler code is unknown or if the code stamped on the coupler is illegible, the code BUNK FUNK, EFUNK, or LOCOUNK should be reported
- Special: Codes ESPEC, FSPEC, and EFSPEC have been created to decline coupler bodies that have been manufactured specifically for the equipment owner and are not listed in the attached table.
- The codes FROTARY and EFROTARY cannot be reported for equipment Built or Rebuilt since August 12, 2014.

```
Inches of Travel B061
The number of inches a draft system will travel
```

-If Draft System Type (B073) is E then Coupler Style (B058) cannot be reported

Used in ETC Generation. Affects Rating.

Range of Values for B061

as L or R

Type E (Rule 16) - SE67BC

SE67BC

Minimum	Maximum
1	30

#### Validation Rule for B061

- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- -If Draft System Type (B073) of Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported
- -Inches of Travel cannot be greater than 20 for equipment with a Built Date (BLDT) on or after January 1, 1974

### Draft System Type Mandatory

B073

#### Describes the draft gear/underframe cushion type

Used in ETC Generation. Affects Rating.

#### Permissible Values for B073

- C Cushioning at Center of Car (COC)
- E Cushioning at End of Car (EOC)
- S Standard Draft Gear
- Devices with less than 6 inches buff travel approved under AAR Standard S-060
- Y Devices with 6 to 10 inches of buff travel approved under AAR Standard S-060

#### Validation Rule for B073

- If Draft System Type (B073) is Standard Draft Gear (S), Inches of Travel (B061) cannot be reported
- If Draft System Type (B073) is reported as C, E, X, or Y then Inches of Travel (B061) must also be reported
- If Draft System Type (B073) of X, or Y is reported then Draft Gear Group/Cushion Unit Pocket (B562) cannot be reported
- If Draft System Type (B073) X is reported, the Inches of Travel (B061) value must be greater than or equal to 1 and less than 6
- If Draft System Type (B073) Y is reported, the Inches of Travel (B061) value must be greater than or equal to 6 and less than or equal to 10
- If Draft System Type (B073) is S then Draft Gear Group/Cushion Unit Pocket (B562) may only be A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z (AAR Rule 21)
- -If Draft System Type (B073) is E then Draft Gear Group/Cushion Unit Pocket (B562) may only be EOC-1,EOC-1D, EOC-1B, EOC-2, EOC-2D, EOC-2B, EOC-3, EOC-3B,EOC-4, EOC-4B, EOC-5, EOC-5D, EOC-5B, EOC-6, EOC-6D, EOC-6B, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-8F, EOC-9, EOC-9D, EOC-9D, EOC-9E, EOC-10, EOC-10D, EOC-10B, EOC-10F, EOC-11, EOC-11D, EOC-11B,EOC-12, EOC-12D, EOC-12B, EOC-13, EOC-13B, EOC-14, EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16, EOC-16D, EOC-16B, EOC-17, EOC-17D, EOC-17B, EOC-18D, EOC-18D, EOC-18D, EOC-2B, EOC-2B, EOC-2B, EOC-23, EOC-23B, EOC-24, EOC-24B, EOC-25E, EOC-26B, EOC-26F, or EOC-27D, or EOC-27E (AAR Rule 59)

#### **Draft Gear Group/Cushion Unit Pocket**

B562

Draft Gear Group/Cushion Unit Pocket value as listed in AAR Field Manual Interchange Rule 21 and 59

Carry forward for Single Clone / Multi-Clone / Restencil / Add-Back / Equipment Group Change.

Permissible Values for B562EOC-1,EOC-1D, EOC-1B, EOC-2, EOC-2D, EOC-2B, EOC-3, EOC-3B,EOC-4, EOC-4B, EOC-5, EOC-5D, EOC-5B, EOC-6, EOC-6D, EOC-6B, EOC-7, EOC-7B, EOC-7B, EOC-7B, EOC-7B, EOC-7B, EOC-7B, EOC-9D, EOC-9B, EOC-10, EOC-10D, EOC-10B, EOC-10F, EOC-11D, EOC-11D, EOC-11B, EOC-12D, EOC-12D, EOC-13B, EOC-13B, EOC-14, EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16, EOC-16D, EOC-16B, EOC-17, EOC-17D, EOC-17B, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-23B, EOC-23B, EOC-24, EOC-24B, EOC-25E, EOC-26B, EOC-27D, EOC-27D, EOC-27D, EOC-17, COC-1, COC-2, COC-3, COC-4, COC-5, COC-6, COC-7, COC-8 (AAR Rule 59).

#### A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, Z (AAR Rule 21).

#### Validation Rule(s) for B562

-Draft Gear Group/Cushion Unit Pocket (B562) is mandatory for equipment built on or after June 13, 2019, unless Draft System Type (B073) is reported as X or Y

- -If Draft Gear Group/Cushion Unit Pocket (B562) is not equal to A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, or Z, then Cushion Unit Type (B563) must be populated
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-6, EOC-7, EOC-7B, EOC-8B, EOC-8B, EOC-9, EOC-9B, EOC-9D, EOC-10, EOC-10B, EOC-10D, EOC-14, EOC-14B, EOC-18D, EOC-23B, EOC-24B, EOC-25E, EOC-26B, or EOC-27D then the Cushion Unit Type (B563) must be 1
- When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-9E, EOC-26F, or EOC-27E, then the Cushion Unit Type (B563) must be 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-11, EOC-12, EOC-13, EOC-13B, EOC-15, EOC-15B, EOC-15D, EOC-17, EOC-17B, EOC-17D, EOC-18, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-24B, COC-3, COC-5, or COC-7 then the Cushion Unit Type (B563) must be 1 or 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-8F or EOC-10F then the Cushion Unit Type (B563) must be 2 or 3
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-5, EOC-5B, EOC-5D, EOC-6B, EOC-6B, EOC-6D EOC-11B, EOC-11D, EOC-12B, EOC-12D, or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3
- or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3
  -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-16D, or COC-1 then the Cushion Unit Type (B563) must be 1, 2, or 4
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D, EOC-3, EOC-3B, EOC-4, EOC-4B, or COC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, or 4
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1, EOC-1B, EOC-1D, or EOC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or S
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-8 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or 5
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1D, EOC-2,EOC-2D, EOC-2B, EOC-3, EOC-3B, EOC-5, EOC-5D, EOC-5B, EOC-6D, EOC-7, EOC-7B, EOC-9, EOC-9B, EOC-9D, EOC-9E, EOC-1DD, EOC-11D, EOC-11B, EOC-11D, EOC-12D, EOC-14,EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16D, EOC-17D, EOC-23, EOC-23B, EOC-27D, or EOC-27E then the Inches of Travel (B061) must be 10
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-19, EOC-19B, EOC-22, EOC-22B, or EOC-25E then the inches of travel must be 12
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-20 or EOC-20B then the Inches of Travel (B061) must be 14
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1B, EOC-4, EOC-4B, EOC-6B, EOC-8B, EOC-8B, EOC-8F, EOC-10, EOC-10B, EOC-10F, EOC-12, EOC-12B, EOC-13, EOC-13B, EOC-17, EOC-17B, EOC-18B, EOC-21, EOC-21B, EOC-24, or EOC-24B then the Inches of Travel (B061) must be 15
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-2, COC-3, COC-4, COC-5, COC-6, or COC-8 then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 1 or 2, then the Inches of Travel (B061) must be 20
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 4, then the Inches of Travel (B061) must be 18
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 2, then the Inches of Travel (B061) must be 20
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 1, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1 then the Inches of Travel (B061) must be 10, 12, or 15
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-26, then the Inches of Travel (B061) must be 18

#### **Data Specification Manual**

#### Validation Rule(s) for B563

- Cushion Unit Type (B563) is mandatory for equipment built on or after June 13. 2019.
- -If Draft Gear Group/Cushion Unit Pocket (B562) is not equal to A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, or Z, then Cushion Unit Type (B563) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-6. EOC-7. EOC-7B, EOC-8, EOC-8B, EOC-9, EOC-9B, EOC-9D, EOC-10, EOC-10B, EOC-10D, EOC-14, EOC-14B, EOC-18D, EOC-23, EOC-23B, EOC-24, EOC-25E, or EOC-26B then the Cushion Unit Type (B563) must be 1.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-9E, EOC-26F, or EOC-27E, then the Cushion Unit Type (B563) must be 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-11, EOC-12, EOC-13, EOC-13B, EOC-15, EOC-15B, EOC-15D, EOC-17, EOC-17B, EOC-17D, EOC-18, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-24B, COC-3, COC-5, or COC-7 then the Cushion Unit Type (B563) must be 1 or 2.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-8F or EOC-10F then the Cushion Unit Type (B563) must be 2 or 3.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-5, EOC-5B, EOC-5D, EOC-6, EOC-6B, EOC-6D EOC-11B, EOC-11D, EOC-12B, EOC-12D, or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-16D, or COC-1 then the Cushion Unit Type (B563) must be 1, 2, or 4.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D, EOC-3, EOC-3B, EOC-4, EOC-4B, or COC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, or 4.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1, EOC-1B, EOC-1D, or EOC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or S.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-8 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or 5.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 1 or 2, then the Inches of Travel (B061) must be 20.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 4, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 2, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 1, then the Inches of Travel (B061) must be

Intermodal Flat **TANK** Tank Car

VFLT Vehicular Flat

#### Validation Rule for A307

- -Unit Equipment Group cannot be reported if the Connected Unit Count (A020) is not reported
- -Unit Equipment Group must be reported if Connected Unit Count (A020) is reported

#### **Unit Tare Weight**

A299

The unit segment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

#### Range of Values for A299

Minimum	Maximum
30000	150000

#### Validation Rule for A299

- -Unit Tare Weight must not be reported if the Connected Unit Count (A020) is not reported
- -Unit Tare Weight must be reported if Connected Unit Count (A020) is reported
- -Unit Tare Weight for Gondolas must be greater than or equal 30,000 lbs.
- -Unit Tare Weight for Gondolas must be less than or equal 150,000 lbs.
- -Unit Segment Tare Weights must add up to the Total Tare Weight (A259)
- -Unit Tare Weight (A299) value must be reported to the nearest 100 pounds

#### **4300 Unit Load Limit**

The maximum permissible weight of the commodity that can be loaded into the unit segment, reported in pounds

#### Range of Values for A300

Minimum	Maximum
70000	300000

#### Validation Rule for A300

- -Unit Load Limit can not be reported if the Connected Unit Count (A020) is not reported
- -Unit Load Limit must be reported if Connected Unit Count (A020) is reported
- -Unit Segment Load Limits must add up to the Load Limit (LDLT)

#### **Unit Cubic Feet Capacity** A065

The calculated interior dimensions of the unit segment in cubic feet

#### Range of Values for A065 Minimum Maximum

#### 400 8800

#### **Validation Rule for A065**

- -Unit Cubic Feet Capacity must not be reported if the Connected Unit Count (A020) is not reported
- -Unit Cubic Feet Capacity requires Connected Unit Count (A020)
- -Unit Cubic Feet Capacity for Gondolas or Hoppers must be greater than or equal 400 cubic feet
- -Unit Cubic Feet Capacity for Gondolas must be less than or equal 8800 cubic feet
- -Unit Cubic Feet Capacity must add up to the Cubic Feet Capacity (A067).

#### **Brake System Components**

**Emergency Brake Valve CID B354** Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

**Emergency Valve COTS Date B567** 

Brake valve emergency portion recondition date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

▲=Used in ETC Generation \*=Conditionally Mandatory June 2025 =Mandatory = Affects Rating **- 56 -**

#### NOTES:

Emergency Valve COTS Date is system-generated from a Emergency Brake

**Emergency Valve OEM Warranty Date** 

**B568** 

Brake valve emergency portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

Emergency Valve OEM Date is system-generated from a Emergency Brake Valve Inspection.

**Emergency Valve Part Number** 

**B569** 

Brake valve emergency portion part number

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

Emergency Valve Part Number is system-generated from a Emergency Brake Valve Inspection.

Service Brake Valve CID

**B357** 

Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Service Valve COTS Date

**B564** 

Brake valve service portion recondition date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

Service Valve COTS Date is system-generated from a Service Brake Valve Inspection

#### Service Valve OEM Warranty Date

**B**565

Brake valve service portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

Service Valve OEM Date is system-generated from a Service Brake Valve Inspection.

**Service Valve Part Number** 

**B566** 

Brake valve service portion part number

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

Service Valve Part Number is system-generated from a Service Brake Valve Inspection.

Slack Adjuster CID

**B359** 

Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Miscellaneous

Commercial Owner CIF

B049

The Customer Identification File (CIF) number for a commercial owner at a specific location

Commercial Lessee CIF

B048

The Customer Identification File (CIF) number for a commercial lessee at a specific location

**Umler Effective Date** 

EFDT

The date the rating activity (pre-registration, modification, etc.) is expected to

This element is not eligible for Query. Does not Carry Forward.

#### Validation Rule for EFDT

-Effective Date cannot be set to more than 13 months in the future.

#### NOTES:

Effective Date will default to the 1st of the following month that equipment is registered

### Inspection

**ABT Due Date (Repair Track)** 

**DU13** 

The due date of the air brake test per AAR Field Manual Rule 3

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**ABT 5-8 Year Due Date** 

**DU58** 

The 5-8 year due date for the air brake test (ABT) after the ABT Due Date (Repair Track)

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**Car Grade** 

**CG01** 

The grading of the interior condition of the equipment

Value does not carry forward for Single Clone / Multi-Clone / Equipment Group Change.

#### Permissible Values for CG01

- A-Grade A
- B-Grade B В
- C C-Grade C
- D D-Holes in Floor or Sides, Gates may be missing
- Κ K-Contaminated (system generated by waybill only)
- U U-Unfit for Lading
- X-Grade A Contains Refuse Х
- Υ Y-Grade B Contains Refuse
- **Z-Grade C Contains Refuse**

**Car Grade Inspection Date** 

**CG02** 

The date of the grading of the interior condition of the equipment

Value does not carry forward for Single Clone / Multi-Clone / Equipment Group Change.

**Car Grade Inspection Time** 

**CG03** 

The time of the grading of the interior condition of the equipment

Value does not carry forward for Single Clone / Multi-Clone / Equipment Group Change.

**Car Grade Location SPLC** 

**CG04** 

The SPLC of the grading location

Value does not carry forward for Single Clone / Multi-Clone / Equipment Group Change.

**Car Grade Inspection SCAC** 

**CG05** 

The shop SCAC grading location

Value does not carry forward for Single Clone / Multi-Clone / Equipment Group Change.

**Inspection Date Done** 

DTDN

The date the inspection was completed; used for all inspection types reported

▲=Used in ETC Generation

= Affects Rating

**- 57 -**

\*=Conditionally Mandatory

June 2025

#### **Data Specification Manual**

#### on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Validation Rule for DTDN

-The inspection date must not be 60 days before the Build Date

#### **Inspection Due Date**

INDD

The due date of the next inspection; used for all inspection types reported on equipment

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Inspection Performer

PERF

The SCAC that completed the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### **Inspection Reporter**

REPT

The SCAC that reported the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Location/SPLC

SPLC

The SPLC of the inspecting location; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### **Air Brake Test Device**

B523

Indicates the type of test device used to perform the Air Brake Test  $\,$ 

### Value does not carry forward for Single Clone / Multi-Clone / Add Back. Permissible Values for B523

A Automatic (Non 4-Pressure)

M Manual

P Automatic (4-Pressure)

#### Validation Rule for B523

 -Air Brake Test Device (B523) must be reported for Air Brake Test inspection reported on or after December 10, 2020

#### Insp Service Valve COTS Date

B570

#### Brake valve service portion recondition date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### NOTES:

- Reports of 9999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYY

#### Insp Service Valve OEM Warranty Date

B571

Brake valve service portion Original Equipment Manufacturer warranty date

### Value does not carry forward for Single Clone / Multi-Clone / Add Back. **NOTES:**

- Reports of 999999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYYYY

#### Insp Service Valve Part Number

B572

#### Brake valve service portion part number

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Insp Emergency Valve COTS Date

B573

Brake valve emergency portion recondition date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### NOTES:

- Reports of 9999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYY

#### **Insp Emergency Valve OEM Warranty Date**

B574

Brake valve emergency portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES

- Reports of 999999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYYYY

Insp Emergency Valve Part Number

B575

Brake valve emergency portion part number

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Insp Service Valve Location Mandatory

B576

Brake valve service portion location

Value does not carry forward for Single Clone / Multi-Clone.

Insp Emergency Valve Location Mandatory

2577

Brake valve emergency portion location reported on an emergency brake valve inspection

Value does not carry forward for Single Clone / Multi-Clone.

#### **Data Specification Manual**

### General USCD

Does not Carry Forward.

Status Code Mandatory

#### **Permissible Values for USCD**

INACTIVE

Identifies the current operational state

PRE-REGISTERED

#### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID	0001
The equipment stenciled number	

#### Validation Rule for 0001

-Equipment Number must not be larger than 6 digits (i.e., 999999) NOTES:

- Equipment ID includes the mark and number stenciled on the equipment. Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD999999).
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

Mechanical Designation Mandatory	UMMD
Equipment description without physical dimensions	•
Used in ETC Generation. Used for Transportation Codes.	

Permissib	le Values	for UI	MMD

P	ermissible	Values for UMMD
	HK	Hopper-Doors Hinged Lengthwise, Dumping Inside/Outside of Rails

LM Hopper-Specially Equipped for demountable containers Hopper-Covered IO

MWB MoW - Ballast Car MWH MoW - Hopper

**Equipment Type Code** 

### An alpha numeric code that describes the physical attributes of equipment

System Generated Field. This element is not eligible for Input. NOTES:

Please Refer to Appendix I for More information Regarding ETC Generation

Maint of Way Service Type	B403
Identifies equipment Maintenance Of Way function	

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B403

Crane / Boom Support Car

F4 Flat-Wheel Sets

T4 Training Car

T8 Track Geometry Car

#### Validation Rule for B403

- Maint of Way Service Type can only be listed on records where the Equipment Group (0002) or Pseudo Equipment Group (B547) is listed as MISC

Built Date Mandatory	BLDT
The date the construction of the equipment is complete	•

Data is Confidential. Used for Transportation Codes. Affects Rating. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for BLDT Minimum Maximum 1/1/1900 12/31/9999

#### Validation Rule for BLDT

- -Built Date must be within the last 99 years
- -Built Date must not be in the future for equipment in Active Status
- -Prior and target equipment's Built Date (BLDT) must match for
- -Built Date cannot be updated within 30 days of the End of Service Date (B078)

#### NOTES:

- Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

Rebuilt / ILS Date	RBDT
The date the re-construction of the equipment is complete	

Data is Confidential. Value does not carry forward for Single Clone / Multi-

Range of Values for RBDT		
Minimum	Maximum	
1/1/1900	12/31/9999	

#### Validation Rule for RBDT

- -Rebuilt/Increased Life Service Date must be after the Built Date (BLDT)
- -Rebuilt Date must not be more than 70 years after the Built Date (BLDT)
- -Rebuilt Date is required for Extended Service Code (A096) 1, 2, or 3 for Increased Life Service
- -Rebuilt Date is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years of service
- -If Rebuilt Date is reported then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life Service

#### NOTES:

- Railroad cars -- applicable only to cars meeting status as provided in both STB Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- Private covered hopper cars -- qualifying under the provisions of Item 621, Note 1, Freight Tariff 6007-series for the purpose of determining cars' age for calculating the mileage rates.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt Date unless car has been approved by the AAR.

**Rebuilt Flag** RBFL Identifies the equipment is nearing its end of life cycle

Data is Confidential. System Generated Field. This element is not eligible for Input.

Permissible Values for RBFL

No Υ

**Owner Mandatory UMOW** Primary reporting mark of the railroad or private company owning the car

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### NOTES:

Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.

=Mandatory ▲=Used in ETC Generation = Affects Rating

**- 61 -**

UMET

=Conditionally Mandatory

June 2025

#### **Data Specification Manual**

Lessee LESE

The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### Validation Rule for LESE

- -Umler Owner (UMOW) and Lessee are not allowed to be equal
- -Lessee cannot be a child reporting mark.

#### NOTES:

In order to assign privately marked cars to a pool, a railroad reporting mark must be reported.

Equipment Group Mandatory	0002
Identifies the various major car types	• -

Used for Transportation Codes. Affects Rating.

**Maintenance Party MNP1** 

The parent reporting mark of the company responsible for the maintenance and repairs of the equipment

Does not Carry Forward.

Mark Owner Category B201 The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

#### Permissible Values for B201

- **US Private**
- C Canadian Private
- Foreign Private
- Н Canadian Class II
- Canadian Class I
- Mexican Class I
- K Canadian Class III
- Mexican Private
- **US Private Steamship**
- 0 Canadian Private Steamship
- Mexican Private Steamship
- Q Foreign Private Steamship
- US Class II Railroad
- US Class I Railroad
- US Class III Railroad
- Mexican Class II Railroad
- Mexican Class III Railroad

#### NOTES:

 This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry.

#### Prior Equipment ID **PRID**

### The previous reporting mark and number of the equipment

#### Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for PRID

- -Prior and target equipment's Built Date (BLDT) must match
- -The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

#### NOTES:

 Prior ID enables equipment records to share the same historical lineage. Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

#### **Last Update Date B122** Date of the last Umler element change

System Generated Field. This element is not eligible for Input.

#### **Equipment Add Date** B082

Date the reporting mark and number was added to the Umler system

System Generated Field. This element is not eligible for Input.

#### USCR **Status Change Reason** Identifies the reason for the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

#### **Permissible Values for USCR**

- **Initial Load**
- Μ Movement
- 0 Status Changed Manually
- Restencil

#### NOTES:

- If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

#### **Status Change Date USCT** Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

#### Δ096 **Extended Service Mandatory** A code indicating the eligibility of an increase to the life cycle

Used for Transportation Codes. Value does not carry forward for Single Clone / Multi-Clone

#### Permissible Values for A096

- 1st ILS Inspection, additional 5 years of Service
- 2nd ILS Inspection, additional 5 years of service (10 years total)
- 3rd ILS Inspection, additional 5 years of service (15 years total)

- Built new from July 1,1974, Qualified for 50 Years Service Built Before January 1, 1964, Qualified for 40 Years Service Ν
- R Rule 88. Rebuilt cars
- U Built between January 1, 1964 - June 30, 1974, Qualified for 40 Years & eligible for certification for 50 Years Service
- Car is certified (FRA Waiver & AAR) for 65 years of service from date built new from January 1, 1964

#### Validation Rule for A096

- -If Rebuilt Date (RBDT) is reported, then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life Service
- -Extended Service Code of C cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974
- -Extended Service Code of E cannot be reported if the car was built before July 1, 1974
- -Extended Service Code of N cannot be reported if the car was built on/after January 1, 1964
- -Extended Service Code of U cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974

- Value is used to calculate End of Service Date (B078).
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years service.
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) 1, 2, 3, and V for Increased Life Service.

#### **End of Service Date** B078 Indicates the date of the end of equipment life

Data is Confidential. System Generated Field. This element is not eligible for

#### NOTES:

Data becomes non-confidential two years prior to End of Service Date.

Do Not Load After **B590** Equipment should not be loaded after date shown in the element

Data is Confidential

#### Validation Rules for B590

- -Do Not Load After (B590) cannot be updated thirty days prior to the date shown in the element.
- -Do Not Load After (B590) cannot be updated within thirty days of the End of Service Date (B078).

▲=Used in ETC Generation =Mandatory

#### **Data Specification Manual**

-Do Not Load After (B590) date cannot be on or after the End of Service (B078) date

#### NOTES:

- The element will be initially populated by End of Service (B078) minus 30
- Data becomes non-confidential thirty days prior to the Do Not Load After (B590) date.

#### **Equipment Identification**

**EINN** 

#### Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

#### NOTES:

Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections.

#### **Info Conflict Status**

**B355** 

#### Indicates that an Informational Conflict exists on the Equipment record

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

**Conflict Status** 

B050

#### Identifies the escalation level of equipment in active conflict

System Generated Field. Affects Rating. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B050

- Subject to Zero-Rating
- Subject to Restricted in Interchange
- Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

#### **Date of Original Conflict**

**B063** 

#### The date the equipment was originally placed in the current conflict

System Generated Field. This element is not eligible for Input.

#### **Next Conflict Status**

**B135** 

#### Identifies the next escalation level of an equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back

#### Permissible Values for B135

- Subject to Zero-Rating
- Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Notice Indicator** 

**B137** 

#### Identifies equipment in error in Umler Notice Management

System Generated Field. This element is not eligible for Input.

#### **Conflict Status Next Date**

**B062** 

#### The date the conflict status will be escalated

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back

#### Rate Indicator

A070

### Indicates the rate type applicable to the unit

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for A070

- Zero-Rated Due to Conflict Errors
- Private Mileage Rate
- 6 Zero-Rated - Scrap (S\_,SX), AAR Overage (XA), FRA Overage (YA), Umler Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].
- Railroad Market Rate
- Q Zero-Rated Railroad Market Rate Due to Conflict Errors

#### NOTES:

 If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.

#### **Private Zero Rate**

**B150** 

Indicates a private car is subject to contractual agreement, nullifying mileage

Affects Rating.

#### Permissible Values for B150

Yes

#### NOTES:

• Reporting "Y" generates Rate Indicator (A070) value 6 and a zero rate.

#### **First Movement Date**

**USAT** 

#### The first movement date under the stenciled mark of the equipment

This element is not eligible for Input. Does not Carry Forward.

#### **Equipment Add Company**

B083

### The reporting mark of the company that added the equipment

System Generated Field. This element is not eligible for Input.

#### **Registration Reason**

B174

#### The code indicating the reason this equipment is added

Does not Carry Forward.

#### Permissible Values for B174

Add-Back

New

Pending Restencil R Restencil

#### **Restencil Program Ind**

**B177** 

#### Identifies the equipment is under a restencil program

#### Permissible Values for B177

Yes

#### **Delete Reason Code**

B064

#### A code that designates the reason the equipment has been deleted

Value does not carry forward for Add Back.

#### Permissible Values for B064

- Restenciled
- D Destroyed or wrecked
- Lease terminated, removed from fleet
- Retired unserviceable beyond economic repair R
- Rebuilt
- Sold Serviceable
- W Over age retired for dismantling
- Error, reporting did not exist

#### **Non-Compliant Wheelsets**

B544

Equipment record is incomplete and has a missing wheelset component ID association. Refer to AAR Field Manual Rule 44 for industry requirements

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for B544

- -A Wheelset Component ID is required for each applicable location on equipment built on or after January 1, 2016
- -A Wheelset Component ID is required for each applicable location on equipment rebuilt on or after January 1, 2016 and Gross Rail Load (A266) is greater than 268,000 lbs

=Mandatory

#### NOTES:

- A "Y" will be system generated if the equipment is active and the number of Wheelset CID's required is not equal to the Axle Count (A024) on the equipment
- Validation rule applies to equipment that has been in Active status for 60 days

#### **Pseudo Equipment Group**

Equipment needs to be identified as a miscellaneous record while maintaining all elements linked to the original equipment group

System Generated Field. Permissible Values for B547 MISC Miscellaneous

### Weight

#### Gross Rail Load/Weight Mandatory

A266

The maximum permissible weight on rail of the equipment and the load, reported in pounds

#### Affects Rating.

Natige of Values for Azoo		
Minimum	Maximum	
43000	2835000	

#### Validation Rule for A266

-Gross Rail Load must be equal to the Load Limit (LDLT) plus the Tare Weight (A259)

Use Table 1 below to determine Gross Rail Load, if Qualification for Increased Gross Rail Load (B344) does not exist.

### TABLE 1 -

Journal Size	Load per Axle	Gross Rail Load for 4-
		axle Equipment
B - 4 1/2" x 8"	25,750 lbs.	103,000 lbs.
C - 5" x 9"	35,500 lbs.	142,000 lbs.
D - 5 1/2" x 10"	44,250 lbs.	177,000 lbs.
E - 6" x 11"	55,000 lbs.	220,000 lbs.
F - 6 1/2" x 12"	65,750 lbs.	263,000 lbs.
G - 7" x 12"	78,750 lbs.	315,000 lbs.
K - 6 1/2" x 9"	71,500 lbs.	263,000 lbs.
M - 7" x 9"	78,750 lbs.	315,000 lbs.

Use Table 2 below to determine Gross Rail Load for 4-axle equipment if Qualification for Increased Gross Rail Load (B344) exists.

TABLE 2 -

IADLL Z		
Qualification for	Journal Size	Gross Rail Load
Increased Gross Rail		
Load (B344)		
1	K - 6 1/2" x 9"	286,000 lbs.
1	G – 7" x 12"	286,000 lbs.
1	M – 7" x 9"	286,000 lbs.
2	F - 6 1/2" x 12"	286,000 lbs.
2	K - 6 1/2" x 9"	286,000 lbs.
3	F - 6 1/2" x 12"	268,000 lbs.
3	K - 6 1/2" x 9"	268,000 lbs.

- For multi-unit equipment, report the total gross rail load for the entire set.
- Refer to Field Manual Rule 70 if additional information is required.

A Gross Rail Load less than the listed or calculated values may be entered; however:

- Star Code (A247) must be R or S, and
- Load Limit (LDLT) must also be reduced, ensuring Tare Weight (A259) plus Load Limit (LDLT) equals the reported Gross Rail Load.

For equipment having two or more different journal sizes, see following examples:

Example for Drawbar Connected:

- A 3-unit drawbar connected car has 12 axles.
- The end units (Locations A and B) each have 4 axles with E 6" x 11" journals.
- The intermediate unit (Locations C) has 4 axles with F 6 1/2" x 12" iournals

Using TABLE 1, the Gross Rail Load would be:

8 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 440.000 lbs. + 4 ea. F-6 1/2" x 12" journal axles X 65,750 lbs. per axle = 263,000 lbs. Gross Rail Load = 703,000 lbs.

Example for Articulated Connected:

- · A 5-unit articulated intermodal car has 6 trucks (12 axles).
- The end trucks (Locations A and B) each have 2 axles with E 6" x 11"
- The intermediate trucks (Locations C, D, E, and F) each have 2 axles with G - 7" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

4 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 220,000 lbs. + 8 ea. G-7" x 12" journal axles X 78,750 lbs. per axle = 630,000 lbs. Gross Rail Load = 850.000 lbs.

### Tare Weight Mandatory

Δ259

Hopper

The equipment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

#### Affects Rating.

#### Range of Values for A259 Minimum Maximum 23000 1080000

#### Validation Rule for A259

- -Tare Weight for all non-articulated HOPP must be less than 120000 lbs.
- -Tare Weight (A259) of HOPP with a blank Connected Unit Count (A020), must contain values between 23,000 lbs. and 120,000 lbs.
- -Tare Weight (A259) of HOPP where Connected Unit Count (A020) is 2, must contain values between 46,000 lbs. and 240,000 lbs.
- -Tare Weight (A259) of HOPP where Connected Unit Count (A020) is 3, must contain values between 69,000 lbs. and 360,000 lbs.
- -Tare Weight (A259) of HOPP where Connected Unit Count (A020) is 4, must contain values between 92,000 lbs. and 480,000 lbs. -Tare Weight (A259) of HOPP where Connected Unit Count (A020) is 5, must
- contain values between 115,000 lbs. and 600,000 lbs. -Tare Weight (A259) of HOPP where Connected Unit Count (A020) is 6, must
- contain values between 138,000 lbs. and 720,000 lbs -Tare Weight (A259) of HOPP where Connected Unit Count (A020) is 7, must
- contain values between 161,000 lbs. and 840,000 lbs. -Tare Weight (A259) of HOPP where Connected Unit Count (A020) is 8, must
- contain values between 184,000 lbs. and 960,000 lbs. -Tare Weight (A259) of HOPP where Connected Unit Count (A020) is 9, must contain values between 207,000 lbs. and 1,080,000 lbs.
- Tare Weight (A259) value must be reported to the nearest 100 pounds if Weighing Date (A288).

#### NOTES:

**- 64 -**

- Do not report an average Tare Weight for car series, except for Pre-Registered cars
- When cars are made active, the actual Tare Weight must be recorded

### Load Limit Mandatory

LDLT

The maximum permissible weight of the commodity that can be loaded into the equipment, reported in pounds

Used in ETC Generation. Affects Rating.

Range of Values for LDLT

Minimum	Maximum
100000	2385000
	_

Validation Rule for LDLT

=Mandatory ▲=Used in ETC Generation

- -Load Limit (LDLT) of HOPP with a blank Connected Unit Count (A020), must contain values between 100,000 lbs. and 265,000 lbs
- -Load Limit (LDLT) of HOPP where Connected Unit Count (A020) is 2, must contain values between 200,000 lbs. and 530,000 lbs.
- -Load Limit (LDLT) of HOPP where Connected Unit Count (A020) is 3, must contain values between 300,000 lbs. and 795,000 lbs.
- -Load Limit (LDLT) of HOPP where Connected Unit Count (A020) is 4, must contain values between 400,000 lbs. and 1,060,000 lbs.
- -Load Limit (LDLT) of HOPP where Connected Unit Count (A020) is 5, must contain values between 500,000 lbs. and 1,325,000 lbs.
- -Load Limit (LDLT) of HOPP where Connected Unit Count (A020) is 6, must contain values between 600,000 lbs. and 1,590,000 lbs.
- -Load Limit (LDLT) of HOPP where Connected Unit Count (A020) is 7, must contain values between 700,000 lbs. and 1,855,000 lbs.
- -Load Limit (LDLT) of HOPP where Connected Unit Count (A020) is 8, must contain values between 800,000 lbs. and 2,120,000 lbs.
- -Load Limit (LDLT) of HOPP where Connected Unit Count (A020) is 9, must contain values between 900,000 lbs. and 2,385,000 lbs.

#### NOTES:

 For connected unit cars report the sum of the load limits for all units in the set.

Weighing Status Mandatory

A289

Indicates the weight information is an estimate or an actual measurement

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A289

- A Actual
- E Estimated
- V Verified correct Tare Weight
- X Tare Weight subject to verification (System Generated)

#### Validation Rule for A289

- -Equipment cannot be within a series of 10 with identical Tare Weights (A259), refer to Appendix P for further information on resolving tare weight conflicts
- -When Status Code changes to Active or Inactive Weighing Status must be reported as Actual (A) or Verified (V) within 60 days of Status Code change

Weighing Date	A288
The date the equipment was actually weighed	

Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A288

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for A288

- -If Weighing Date is reported the Tare Weight (A259) must be reported
   -When Weighing Date is reported then Weighing Status (A289) must be A (Actual) or V (Verified)
- -If Weighing Status (A289) is A (Actual) or V (Verified correct Tare Weight) then Weighing Date must be reported
- -Weighing Date must be on or before the current date
- -Weighing Date cannot be before Built / Rebuilt date

Cubic Feet Capacity <i>Mandatory</i>	A067
The maximum interior cubic feet capacity of the equipment	•

Used in ETC Generation.

Range of Values for A067		
Minimum	Maximum	
400	76500	

### Validation Rule for A067

- -Cubic Feet Capacity for all non-articulated HOPP must be less than 8500 cubic feet
- -Cubic Feet Capacity (A067) of HOPP with a blank Connected Unit Count (A020), must contain values between 400 cubic feet and 8,500 cubic feet
- -Cubic Feet Capacity (A067) of HOPP where Connected Unit Count (A020) is 2, must contain values between 800 cubic feet and 17,000 cubic feet
- -Cubic Feet Capacity (A067) of HOPP where Connected Unit Count (A020) is 3, must contain values between 1 200 cubic feet and 25 500 cubic feet
- must contain values between 1,200 cubic feet and 25,500 cubic feet -Cubic Feet Capacity (A067) of HOPP where Connected Unit Count (A020) is 4,
- must contain values between 1,600 cubic feet and 34,000 cubic feet
  -Cubic Feet Capacity (A067) of HOPP where Connected Unit Count (A020) is 5,
- must contain values between 2,000 cubic feet and 42,500 cubic feet
  -Cubic Feet Capacity (A067) of HOPP where Connected Unit Count (A020) is 6,
  must contain values between 2,400 cubic feet and 51,000 cubic feet

- -Cubic Feet Capacity (A067) of HOPP where Connected Unit Count (A020) is 7, must contain values between 2,800 cubic feet and 59,500 cubic feet
- -Cubic Feet Capacity (A067) of HOPP where Connected Unit Count (A020) is 8, must contain values between 3,200 cubic feet and 68,000 cubic feet
- -Cubic Feet Capacity (A067) of HOPP where Connected Unit Count (A020) is 9, must contain values between 3,600 cubic feet and 76,500 cubic feet

#### NOTES:

- For connected unit cars report the sum of all units cubic capacity.
- Plate Codes B, C, E, F, G are applicable to Hoppers

Star Code A247

Indicates a reduction of the Load Limit (LDLT) of the equipment per AAR Rule 70

#### Affects Rating

#### Permissible Values for A247

- R Body Capacity less than Truck Capacity
- S Reduced Load Limit

#### Validation Rule for A247

- -4-axle Cars with Star Codes of S or R must not exceed Gross Weight of 263,000 lbs. when Journal Size is A, B, C, D, or E
- -Journal Sizes having Star Code of S must have a Gross Weight that is less than the calculated Gross Weight with rounding applied
- -UnStarred 4 Axle Cars reporting increased Gross Rail Load (IGRL) of 2 or 3 must have a Gross Weight greater than or equal to 264,000 lbs.
- -Starred 4 axle cars with IGRL of 1 must have a Wheel Size of 36 inches when Gross Weight is less than 286,000 lbs.
- -Starred 4 Axle Cars with Increased Gross Rail Load (IGRL) reported must have a Journal Size of K, G, or M

#### Qual for Inc GRL B344

AAR qualification for increased Rail Load Code designating AAR approval for operating 4-axle equipment at a gross rail load greater than 263,000 lbs per AAR Rule 88

#### Permissible Values for B344

- 1 Rule 88 IGRL Code 1 (> 263,000 lbs. and <= 286,000 lbs. GRL per AAR Specification S-286)
- 2 Rule 88 IGRL Code 2 (> 263,000 lbs. and <= 286,000 lbs. GRL)
- 3 Rule 88 IGRL Code 3 (> 263,000 lbs. and <= 268,000 lbs. GRL)

#### Validation Rule for B344

- -Equipment having Qualification for Increased Gross Rail Load of 3, and a Gross Rail Load (A266) less than 268,000 lbs, must have Star Code (A247) of S.
- -Equipment having Qualification for Increased Gross Rail Load of 1 or 2, and a Gross Rail Load (A266) less than 286,000 lbs, must have Star Code (A247) of S.
- -4-axle equipment with Gross Rail Load (A266) greater than 263,000 lbs. and less than 315,000 lbs., and Star Code (A247) blank, must report Qualification for Increased Gross Rail Load.
- -4-axle equipment having Qualification for Increased Gross Rail Load of 1, 2, or 3 must have a Wheel Diameter (A294) of 36 or 38
- -4-axle equipment having Qualification for Increased Gross Rail Load of 2 or 3 must have a Journal Size (A147) of F or K
- -4-axle equipment having Qualification for Increased Gross Rail Load of 1 must have a Journal Size (A147) of K, G, or M
- -4-axle equipment having Qualification for Increased Gross Rail Load of 3 must have Gross Rail Load (A266) that does not exceed 268,000 lbs
- -4-axle equipment having Qualification for Increased Gross Rail Load of 1 or 2 must have Gross Rail Load (A266) that does not exceed 286,000 lbs

#### **Dimension**

Plate Code Mandatory

A046

Indicates the extreme height and width clearance of the equipment

Affects Rating.

#### Permissible Values for A046

- B Plate Code B
- C Plate Code C
- Plate Code E
- F Plate Code F
- G Clearance Code G N Plate Code N

#### NOTES:

 For a description of Plate Codes, please see Appendix J at the back of this manual.

- o Report B: If clearance does not exceed Plate B
- o Report C: If clearance is greater than Plate B. but does not exceed Plate C
- o Report E: If clearance is greater than Plates B and C, but does not exceed
- o Report F: If clearance is greater than Plates B, C and E, but does not exceed Plate F
- o Report G: If clearance exceeds Plates B, C, E, F, and N.
- o Report N: If clearance is greater than Plates B, C, E, and F, but does not exceed Plate N.
- There is no AAR Plate G. Clearance Code G is included in Umler to represent equipment that does not fit any existing AAR clearance plates.
- For ARTICULATED/MULTI-UNIT SET report the most restrictive clearance plate of UNIT in the set.

Outside Length Mandatory	OSLG
The outside length over pulling faces of couplers in normal position	

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for OSLG

Minimum Maximum 20 ft 0 inches 720 ft 0 inches

#### Validation Rule for OSLG

- -Outside Length (OSLG) on freight cars (except refrigerators) must not exceed Inside Length (A135) by more than 16 feet
- -Outside Length (OSLG) of HOPP with a blank Connected Unit Count (A020), must contain values between 20 feet and 80 feet
- -Outside Length (OSLG) of HOPP where Connected Unit Count (A020), is
- 2, must contain values between 40 feet and 160 feet
- -Outside Length (OSLG) of HOPP where Connected Unit Count (A020), is
- 3. must contain values between 60 feet and 240 feet
- -Outside Length (OSLG) of HOPP where Connected Unit Count (A020), is
- 4, must contain values between 80 feet and 320 feet
- -Outside Length (OSLG) of HOPP where Connected Unit Count (A020), is
- 5, must contain values between 100 feet and 400 feet -Outside Length (OSLG) of HOPP where Connected Unit Count (A020), is
- 6, must contain values between 120 feet and 480 feet
- -Outside Length (OSLG) of HOPP where Connected Unit Count (A020), is
- 7, must contain values between 140 feet and 560 feet
- -Outside Length (OSLG) of HOPP where Connected Unit Count (A020), is
- 8. must contain values between 160 feet and 640 feet
- -Outside Length (OSLG) of HOPP where Connected Unit Count (A020), is
- 9, must contain values between 180 feet and 720 feet

#### NOTES:

- For connected unit cars report the maximum coupled length of the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

#### **Outside Extreme Width Mandatory** A186 The outside extreme width of the equipment

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A186 Minimum Maximum 12 ft 0 inches

7 ft 0 inches

#### Validation Rule for A186

-Outside Extreme Width must not exceed 10 feet 8 inches for Plate Codes B, C, E, F, or N

### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

Outside Extreme Height Mandatory	A185
Height from top of rail to extreme projecting height	

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A185

Minimum	Maximum
10 ft 0 inches	17 ft 0 inches

#### Validation Rule for A185

-Outside Extreme Height for Plate Codes B must be less than or equal to 15 feet 1 inch

- -Outside Extreme Height for Plate Codes C or I must be less than or equal to 15 feet 6 inches
- -Outside Extreme Height for Plate Code E must be less than or equal to 15 feet 9 inches
- -Outside Extreme Height for Plate Code F must be less than or equal to 17
- -Outside Extreme Height for Plate Code N must be less than or equal to 17 feet 1 inch

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

Outside Height Extr Width Mandatory	A187
The highest point at which the extreme width of the equipment occurs	•

Displayed in feet and inches on the Web. Stored in inches.

Range of values for A187	
Minimum	Maximum
1 ft 0 inches	18 ft 0 inches

- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 8 inches if Outside Height Extreme Width is 13 feet 10
- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 7 inches if Outside Height Extreme Width is 13 feet 11
- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 0 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 4 inches if Outside Height Extreme Width is 14 feet 1 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 2 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 3 inches
- -Outside Extreme Width (A186) for Plate Code B must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 4 inches -Outside Extreme Width (A186) for Plate Code B must not exceed 9
- feet 9 inches if Outside Height Extreme Width is 14 feet 5 inches
  -Outside Extreme Width (A186) for Plate Code B must not exceed 9
- feet 5 inches if Outside Height Extreme Width is 14 feet 6 inches
  -Outside Extreme Width (A186) for Plate Code B must not exceed 9

#### **Data Specification Manual**

Outside Opper Laves rigi	itside Upper Eave	s Hgh	t
--------------------------	-------------------	-------	---

A193

Height from the top of rail to the uppermost outside corner of the equipment

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A193

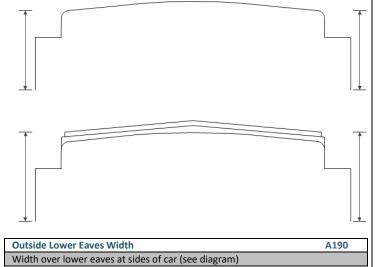

Minimum	Maximum	
7 ft 0 inches	17 ft 0 inches	

#### Validation Rule for A193

- Outside Upper Eaves Height must not exceed the Outside Extreme Height (A185)
- -Outside Upper Eaves Height must be greater than or equal to the Outside Lower Eaves Height (A189)
- -Outside Upper Eaves Height for Plate Codes B must not exceed 15 feet 1 inch
- -Outside Upper Eaves Height for Plate Codes C must not exceed 15 feet 6 inches
- Outside Upper Eaves Height for Plate Code E must not exceed 15 feet 9 inches
- -Outside Upper Eaves Height for Plate Code F must not exceed 17 feet 0 inches
- -Outside Upper Eaves Height for Plate Code N must not exceed 17 feet 1 inch

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- If equipment operates with removable cover Roof Type (A226) code 2, report dimension with cover installed.

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A190

Minimum Maximum
7 ft 0 inches 10 ft 10 inches

- Outside Lower Eaves Width can only be reported for Hoppers with roofs or covers (Mechanical Designation of LO, HTR, HKR, HMSR, LM, MWB, or MW)
- -Outside Lower Eaves Width must not exceed the Outside Extreme Width (A186)
- Outside Lower Eaves Width must be greater than or equal to Outside Upper Eaves Width (A194)
- -Outside Lower Eaves Width must be reported if Outside Lower Eaves Height (A189) is reported
- -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 13 feet 10 inches or
- -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 7 inches if Outside Lower Eaves Height (A189) is 13 feet 11 inches
- -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 6 inches if Outside Lower Eaves Height (A189) is 14 feet 0 inches
- -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 3 inches if Outside Lower Eaves Height (A189) is 14 feet 2 inches
- -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 2 inches if Outside Lower Eaves Height (A189) is 14 feet 3 inches
- -Outside Lower Eaves Width for Plate Code B must not exceed 10 feet 0 inches if Outside Lower Eaves Height (A189) is 14 feet 4 inches
- -Outside Lower Eaves Height (A189) is 14 feet 4 mines -Outside Lower Eaves Width for Plate Code B must not exceed 9 feet 9 inches if Outside Lower Eaves Height (A189) is 14 feet 5 inches

  -Outside Lower Eaves Width for Plate Code C must not exceed 8 feet 10
- inches if Outside Lower Eaves Height (A189) is 15 feet 1 inches
  -Outside Lower Eaves Width for Plate Code C must not exceed 8 feet 6
- inches if Outside Lower Eaves Height (A189) is 15 feet 2 inches -Outside Lower Eaves Width for Plate Code C must not exceed 8 feet 3
- inches if Outside Lower Eaves Height (A189) is 15 feet 3 inches
  -Outside Lower Eaves Width for Plate Code C must not exceed 7 feet 11
- -Outside Lower Eaves Width for Plate Code C must not exceed / feet 1 inches if Outside Lower Eaves Height (A189) is 15 feet 4 inches
   -Outside Lower Eaves Width for Plate Code C must not exceed 7 feet 8
- inches if Outside Lower Eaves Height (A189) is 15 feet 5 inches
  -Outside Lower Eaves Width for Plate Code C must not exceed 7 feet 4
- inches if Outside Lower Eaves Height (A189) is 15 feet 6 inches
  -Outside Lower Eaves Width for Plate Code E must not exceed 10 feet 8
- inches if Outside Lower Eaves Height (A189) is 15 feet 2 inches or less
  -Outside Lower Eaves Width for Plate Code E must not exceed 10 feet 6
  inches if Outside Lower Eaves Height (A189) is 15 feet 3 inches
- -Outside Lower Eaves Width for Plate Code E must not exceed 10 feet 3 inches if Outside Lower Eaves Height (A189) is 15 feet 4 inches

#### **Data Specification Manual**

-Outside Lower Eaves Width for Plate Code E must not exceed 9 feet 6 inches if Outside Lower Eaves Height (A189) is 15 feet 5 inches

-Outside Lower Eaves Width for Plate Code E must not exceed 8 feet 8 inches if Outside Lower Eaves Height (A189) is 15 feet 6 inches

-Outside Lower Eaves Width for Plate Code E must not exceed 7 feet 11 inches if Outside Lower Eaves Height (A189) is 15 feet 7 inches

-Outside Lower Eaves Width for Plate Code E must not exceed 7 feet 1 inches if Outside Lower Eaves Height (A189) is 15 feet 8 inches

-Outside Lower Eaves Width for Plate Code F must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 16 feet 3 inches or less

-Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 16 feet 9 inches or less

-Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 6 inches if Outside Lower Eaves Height (A189) is 16 feet 10 inches

-Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 4 inches if Outside Lower Eaves Height (A189) is 16 feet 11 inches -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 2

inches if Outside Lower Eaves Height (A189) is 17 feet 0 inches -Outside Lower Eaves Width for Plate Code N must not exceed 9 feet 11 inches if Outside Lower Eaves Height (A189) is 17 feet 1 inch

- Round fraction to the higher inch, e.g., 05 1/4" = 06"
- For connected unit cars report the dimension of the largest unit in the set.

Outside Lower Eaves Hght
Height from top of rail to lower eaves at side of car (see diagrams)

Displayed in feet and inches on the Web. Stored in inches.

Range of Values for A189		
Minimum	Maximum	
8 ft 0 inches	16 ft 0 inches	

#### Validation Rule for A189

-Outside Lower Eaves Height may only be reported for Hoppers with roofs or covers (Mechanical Designations of LO, HTR, HKR, HMSR LM, MWB, or MW

-Outside Lower Eaves Height must not exceed the Outside Extreme Height (A185)

-Outside Lower Eaves Height for Plate Codes A, B or H must not exceed 15 feet 1 inch

-Outside Lower Eaves Height for Plate Codes C or I must not exceed 15 feet 6 inches

-Outside Lower Eaves Height for Plate Code E must not exceed 15 feet 9 inches

-Outside Lower Eaves Height for Plate Code F must not exceed 17 feet 0 inches

-Outside Lower Eaves Height for Plate Code N must not exceed 17 feet 1

#### NOTES:

- Round fraction to the higher inch, e.g., 05 1/4" = 06"
- For connected unit cars report the dimension of the largest unit in the set.

Truck Center Length	A276
The length between the centers of the two truck systems	_

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A276 Minimum Maximum 15 ft 0 inches 64 ft 0 inches

#### Validation Rule for A276

-Truck Center Length is required if the equipment has a Built Date (BLDT) or Rebuilt Date (RBDT) that is on or after June 18, 2020

-Truck Center Length is required for cars with an Outside Length (OSLG) of greater than 62 feet 6 inches

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

### Specification

**Truck Count B256** The total number of trucks on the equipment

System Generated Field. This element is not eligible for Input.

Range of Values for B256			
Minimum	Maximum		
2	Δ		

Axle Count Mandatory	A024
The total number of axles on the equipment	

#### Affects Rating.

Range of Values for A024 Minimum Maximum 36

#### Validation Rule for A024

-Axle Count must be greater than or equal to 4

-Axle Count for an articulated car must be greater than or equal to ((Connected Unit Count (A020) x 2) + 2)

-Axle Count for a draw bar connected car must be greater than or equal to (Connected Unit Count (A020) x 4)

-Total Axle Count must match sum of truck axle counts

#### Wheel Bearing Type Mandatory **B191** Indicates the wheel bearing journal design for the equipment

#### Affects Rating.

A189

Permissible Values for B191 Plain R

#### Validation Rule for B191

-Cars with Plain Bearings will have a Transportation Code (TCOD) and Transportation Condition Code (TCCD) of either YA, S\_, SX, or XJ -Equipment cannot have Plain Bearings if Built Date (BLDT) is on or after

#### **Bearing Shielded From HBD** B021

Indicates the wheel bearings are shielded from wayside hot box detectors

#### Permissible Values for B021

January 1, 1993

Yes

#### **Brake Shoe Type Mandatory** B026 Indicates the type of brake shoe on the equipment

#### Permissible Values for B026

- Tread Conditioning
- High Friction Composite
- Low Friction Composite/Cast Iron

#### **CC Side Bearing Type** A146

Indicates the travel range of the constant contact side bearings installed on the equipment

#### Permissible Values for A146

- Long Travel Constant Contact
- SC **Short Travel Constant Contact**

#### Validation Rule for A146

-Equipment having Qualification for Increased Gross Rail Load (B344) of 1 must have Constant Contact Side Bearing Type of LC

#### **Empty/Load Device Eqpd**

B075

Indicates that the air brake system includes a device to determine if the equipment is empty or loaded, and then varies the braking forces accordingly

#### **Permissible Values for B075**

#### A030 **Body Material** The material that composes the body of the equipment

#### Permissible Values for A030

- 01 Aluminum
- 04 Combination
- 18 Stainless Steel
- 19 Standard Steel

#### Center Of Gravity Empty

A045

When empty, indicates the height from Top of Rail to the Center of Gravity

#### Range of Values for A045 Minimum Maximum

B124

## Umler'

#### **Data Specification Manual**

-All cars that exceed Plate Code (A046) C built on or after January 1, 2012 must report Center of Gravity (Empty Car)

**Remote Monitoring Device** 

Indicates the equipment has a device that transmits a signal or records data

#### Permissible Values for B176

Ν No

#### NOTES:

Per AAR S-2045, This may be data related to ride quality, geographic location, temperature/condition of the load, load/empty status, etc.

**AEI High Temperature Tag** 

**B006** 

B176

Indicates the equipment is equipped with a high temperature AEI tag

#### Permissible Values for B006

High Temperature Tag

**Compartment Count** A052 The number of individual compartments the equipment contains

Range of Values for A052 Minimum Maximum

**Degree of Slope Sheets** A071

The angle in degrees of the slope sheets, from horizontal

#### Range of Values for A071 Maximum Minimum 10 90

#### Validation Rule for A071

-Degree of Slope Sheets is required for Hoppers other than Mechanical Designation (UMMD) of LO, MWB, or MW if the car was Built Date (BLDT) or Rebuilt Date (RBDT) after July 1, 1997

**Unloading System Type** B220 Describes the unloading system of the equipment

Used in ETC Generation.

#### Permissible Values for B220

**FLGR** Fluidized/Gravity FIPN Fluidized/Pneumatic GRAV Gravity

GRPN Gravity/Pneumatic OTHR Other **PNFU** Pneumatic **PSDF** Pressure Differential

### Validation Rule for B220

-Unloading System Type must be reported for Covered Hoppers (UMMD = LO).

**Auto Unload Device Equip B224** Identifies whether non-covered Hoppers have an automatic unloading device

#### Permissible Values for B224

#### Validation Rule for B224

-Automatic Unloading Device Equipped cannot be reported for Covered

**B223** Vibrator Bracket Equipped Identifies the equipment has vibrator brackets

#### Permissible Values for B223

Yes

#### Validation Rule for B223

-Vibrator Bracket can only be reported for Covered Hoppers with Mechanical Designation (UMMD) of LO, MWB, or MW

Indicates the equipment is designed to carry low density commodities such as wood chips and similar products

Used in ETC Generation.

#### Permissible Values for B124

#### Validation Rule for B124

-Light Density can only be reported for Hoppers with Mechanical Designation (UMMD) of HKS, HMS, HTR, HTS, HKR, HMSR, HMA, MWB, or MW

Connected Unit Count A020

Indicates the number of units within an articulated or multi-unit equipment

**Affects Rating** 

Range of Values for A020 Minimum Maximum

#### Validation Rule for A020

- -Connected Unit Count must equal the number of Unit Segments
- -Unit Segment Component elements must not be reported if the Connected Unit Count is not reported
- -Unit Segment Component elements must be reported if Connected Unit Count is reported

Intermediate Conn Style

Indicates the method by which two or more pieces of equipment are connected

#### Permissible Values for B115

Articulated Connector

D **Drawbar Connector** 

#### Validation Rule for B115

- -Intermediate Connector Style is required for multi-unit equipment
- -Intermediate Connector Style must not be reported for single unit equipment

#### Operating Brakes Mandatory

A182

B115

The number of air brake control valves on the equipment (excludes hand brakes). One control valve consists of a service portion, emergency portion, and pipe bracket. Example: DB-60 control valve

#### Permissible Values for A182

5 1 7 6 8

#### Validation Rule for A182

- -Operating Brakes must be reported for all equipment
- -Operating Brakes (A182) must be 1 for non-articulated equipment with an Axle Count (A024) equal to 4

#### NOTES:

Excludes empty/load device, number 8 vent valve, and proportion valve.

**ECP Brake Type B327** 

Indicates the type of electronic controlled pneumatic brake used on the equipment

#### Permissible Values for B327

- Not Equipped
- Overlay Both ECP & Air Brake 0
- Stand Alone ECP Only

-Equipment must have a value entered for ECP Brake Type if built or rebuilt after June 28, 2012

**ECP Brake Builder** B328

The manufacturer of the electronic controlled pneumatic brake used on the equipment

#### **Permissible Values for B328**

HPA **HPA Monon Corporation** NYAB New York Air Brake WABT WABTEC

#### Validation Rule for B328

-If ECP Brake Type (B327) is Stand Alone or Overlay then a value must be entered for ECP Brake Builder

=Mandatory ▲=Used in ETC Generation = Affects Rating

**-71-**

=Conditionally Mandatory

-If ECP Brake Type (B327) is Not Equipped then ECP Brake Builder is not

I	Slack Adjuster Group	B53	38
ĺ	The slack adjuster group on the equipment per AAR Field Manual F	Rule #8	#

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B538

Α	Group A	В	Group B	С	Group C	D	Group D
E	Group E	F	Group F	G	Group G	Н	Group H
J	Group J	L	Group L	M	Group M	N	Group N
0	Group O	Р	Group P	Q	Group Q	R	Group R
1	Internal	2	Unequipped		•		•

#### Validation Rule for B538

- Slack Adjuster Group is mandatory for all equipment built or rebuilt on or after January 1, 2016
- If Slack Adjuster Group is reported as "1" then Brake Cylinder Mount Type (B540) must be reported as "T"
- If Slack Adjuster Group is "1" or "2", then Slack Adjuster CID (B359) must not be reported.

Permissible value of "1 - Internal" identifies special truck mounted internal slack adjuster within brake cylinder.

Brake Cylinder Mount Type	B540
Identifies the location of the brake cylinder	*

#### Permissible Values for B540

- **Body Mounted**
- Truck Mounted

#### Validation Rule for B540

- Brake Cylinder Mount Type is mandatory for all equipment built or rebuilt on or after January 1, 2016

Equipment Builder	A035
Identifies the original manufacturer of the equipment	*

#### Validation Rule for A035

- -Equipment Builder must be populated if the Built Date (BLDT) is July 1, 2010 or newer
- -Equipment built or rebuilt on or after July 1, 2010 cannot have a Equipment Builder of Unknown
- -Equipment with a Built Date (BLDT) on or after July 1, 2010 cannot have an Equipment Builder Code of OWNER RAILROAD.
- -Equipment Builder can have a value of MULT only if the equipment has multiple units.

#### **Builder Lot Code** B030

A unique identifier for a group of equipment built by one manufacturer under the same builder specification

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

#### Validation Rule for B030

-Equipment built or rebuilt on or after June 28, 2012 must have a value for **Builder Lot Code** 

**Built Country** B031

The country where the equipment was constructed

Data is Confidential

Permissible Values for B031

Mexico Canada US **United States** 

**Rebuilt Country** B170 The country where the equipment was re-constructed

Permissible Values for B170

Canada MX Mexico

US **United States** 

**FRA Reflectorization** B096 Indicates the equipment owner assumes responsibility for applying reflectorization tape

#### Permissible Values for B096

Reflectorization Plan W Reflectorization Waiver

Validation Rule for B096

-Reflectorization is mandatory for all equipment after November 28, 2015.

**Bottom Outlet Count** B142 The number of bottom outlets or washouts on the equipment

Range of Values for B142 Minimum Maximum

Air Hose Arrangement	B524
The type of trainline air hose arrangement	*

Permissible Values for B524

= Affects Rating

- S-424 Angle Cock Location
- В S-425 Angle Cock Location on Cars Equipped with AAR Type F Coupler
- S-426 Angle Cock Location on Cars with Floating Sills
- D S-427 Angle Cock and Air Brake Hose Location on Cars with Excessive Overhang Preventing Compliance with AAR Standards
- Ε S-428 Angle Cock Location on Cars Equipped with AAR Type F Coupler and Cushioned Underframe
- S-4003 (Former Standard)
- S-4003x (Former Standard Retrofitted to Meet All Dimensions Except G Height)

- S-4030 Trolley Arrangement on Cars with EOCC and E-Shank Couplers M

-Air Hose Arrangement must be reported for this equipment if it is Built or Rebuilt on or after April 22, 2014.

- If any of the following conditions apply, Air Hose Arrangement (B524) must be reported for cars Built or Rebuilt on or after April 22, 2014:
  - Draft Gear Type (B073) at any location is C or E.
  - Connected Unit Count (A020) is reported.
  - Outside Length (OSLG) is greater than or equal to 70 feet (840 inches).
  - The overhang is greater than 5 feet 6 inches (66 inches). Overhang is calculated as follows:
  - $^{\circ}~$  0.5 \* (Outside Length, in inches, minus Truck Center Length, in inches, minus 31 inches)
    - For all other equipment, reporting Air Hose Arrangement is optional.

#### 4-Pressure ABT Receiver Eqpd

Identifies if the equipment is equipped with a 4-pressure air brake test receiver

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B539

- Equipped
- Ν Not Equipped

#### NOTES:

 An "E" will be system generated if a 4-Pressure ABT is reported on the equipment.

#### Feature

A158 **Lining Material** 

#### Describes the type of construction material used in the lining of equipment

## Permissible Values for A158

- 03 Cement
- 07 Composite Wood and Steel
- 08 Fiberglass
- 12 Metal Clad
- 13 Metal Spray
- 16 Rubber
- 17 Sheet Metal
- 26 Synthetic Unlined
- 28 29 Vinvl
- 30 Wood

**Roof Type** Describes the type of roof or hatches on the equipment

#### Permissible Values for A226

- Trough hatch in roof
- Removable roof
- 3 Self-storing roof
- Round hatches on center line of car
- Other types of roof openings
- Combination (trough & round or square) hatches
- Rectangular or square roof hatches
- Round hatches offset from center line of car

Rectangular or square hatches offset from center line of

#### Validation Rule for A226

- -Trough Hatch Roofs are only applicable to Gondolas and Hoppers with Mechanical Designation of GBR, GBSR, GWSR, HKR, HMSR, HTR, or LO -Self-Storing Roofs are only applicable to Boxcars and Hoppers with
- Mechanical Designation of HKR, HMSR, HTR, LC, LO, or XP
- -Round hatches on center line of car are only applicable for Covered Hoppers with Mechanical Designation (UMMD) of LO -Rectangular or Square Roof Hatches are only applicable to Boxcars with
- Mechanical Designation (UMMD) LC -Other types of Roofs are only applicable to Hoppers, or Specialized Gondolas with Roofs with Mechanical Designation of LO, HTR, or GTR
- -Mechanical Designations GBR, GBSR, GWSR, GTR, HKR, HMSR, HTR, or LO require that Roof Type be set

Cost	
Original Cost	A184
The original manufacturer selling price	*

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

Range of Values for A184	
Minimum Maximum	
0	9999999

#### Validation Rule for A184

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments
- -Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported
- -Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost
- -Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

- Original Cost is never altered. It is the cost of the equipment to the original owner.
- For privately marked hopper (LO) cars, report in US dollars the original cost.
- For railroad-marked cars, report in US dollars the original ledger value of the original owner For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24
- The original cost is used in the settlement of AAR Interchange Rule 107 Office Manual.
- For connected unit cars report the total original cost for all units in the set.
- Numeric, applicable to all railroad-marked cars Also, applicable to privately marked covered hopper (LO) cars.
- Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

Ledger Value A150 The sum of original cost and additions & betterments

Data is Confidential. Value does not carry forward for Single Clone / Multi-

Range of Values for A150	
Minimum	Maximum
0	9999999

### Validation Rule for A150

- -Original Cost must be equal to the Ledger Value if there are no Additions
- -Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

Total A&B A003 System generated sum of all reported amounts in A&B Amount (A317), in US

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A003 Minimum Maximum 99999999

#### NOTES:

For railroad-marked cars, report the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not

A226

# **Umler**<sup>6</sup>

#### **Data Specification Manual**

- be used to report Ledger Value.
- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.
- For privately marked covered hopper (LO) cars, report (if not in original cost) the cost of original into-service freight, capitalized linings, capitalized additions and betterments as authorized by Freight Tariff 6007-series. This field is used to determine Adjusted Value for mileage rate calculations.
  - Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
  - o Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.
- For connected unit cars report the total Truck Location A for all units in the

#### Ind for Pos/Neg Total A&B

A128

A code indicating the positive or negative adjustment to the original cost of the

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A128

Negative

Positive

#### A&B Pos/Neg Ind

A316

A code indicating the positive or negative adjustment to the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A316

Ρ Ν Negative Positive

#### Validation Rule for A316

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -The A&B Indicator is required when Additions & Betterments are reported.
- -The A&B Indicator must not be reported if Additions & Betterments are not reported.

A317

The amount of the individual addition and betterment added to or subtracted from the original cost of the equipment

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Range of Values for A317

Minimum	Maximum
1	999999

### Validation Rule for A317

-When entering an individual addition & betterment; A&B Date Done (A319), A&B Type (A318), A&B Pos/Neg Ind (A316), and A&B Amount (A317) must be reported

#### **A&B Date Done**

A319

### The date of the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A319

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for A319

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -Addition and Betterment Date Done cannot be earlier than Built Date (BLDT)
- -Additions & Betterments Date Done cannot be later than today's date.

A318

The type of individual addition and betterment as defined by Rule 107

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Permissible Values for A318

**GNRL** General - Capitalized Additions and Betterments

INIT Initial load of historical A&B amount as of Umler 4.6 implementation

LOLI Protective coating inside LO covered hopper, includes renewal of

lining in damaged cars

**SPAR** Any type Sparger system applied. Includes renewal of lining in damaged cars.

#### Validation Rule for A318

-For each equipment, only one Individual A&B Type can have a value of INIT.

-When entering an individual Addition & Betterment, you must enter a value in all 4 fields.

### Car Management

**Pool Number** 

P001

**TCPC** 

**TCUR** 

Unique number used to indicate the grouping of equipment for a particular

Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add Back.

**Pool Control** 

#### **Pool Control**

System Generated Field. Used for Transportation Codes. This element is not eligible for Input, Output or Query.

#### NOTES:

For further explanation reference Appendices C and E.

## **User Routing Instructions**

The routing instruction reported by the user

Used for Transportation Codes.

#### **Permissible Values for TCUR**

- Trailer Service Rule 2
- G Contaminated commodity service
- Μ Mark canceled
- 0 Owner requested return
- Unassigned equipment

#### NOTES:

For further explanation reference Appendix E.

#### **Umler Transportation Code**

TCOD

The type of assigned service, empty routing or restriction of the equipment

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

### NOTES:

For further explanation reference Appendix E.

#### **Transportation Cond Code**

TCCD

## The AAR or FRA interchange restriction code

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

#### **Mechanical Restriction**

**TCME** 

## User reported or system generated type of mechanical restriction

Used for Transportation Codes.

#### Permissible Values for TCME

- Scrap
- **AAR Interchange Restriction**
- FRA Interchange Prohibited

#### NOTES:

For further explanation reference Appendix D.1

### Mech Restriction Reason

**TCMR** 

## The explanation of the Mechanical Restriction (TCME)

Used for Transportation Codes.

#### Permissible Values for TCMR

Restricted Due to Age (Over 40-AAR, Over 50-FRA)

В Restricted Due to Air Brakes

=Mandatory ▲=Used in ETC Generation

# **Umler**<sup>®</sup>

#### **Data Specification Manual**

- C Restricted Due to Axles
- D Restricted Due to Couplers and Couplers Parts
- F Restricted Due to Couplers Yokes
- G Restricted Due to Draft Gears
- Restricted Due to Journal Bearing and Journal Lubrication
- N Restricted Due to Trucks
- Restricted Due to Truck Side Frames
- Restricted Due to Trucks Bolsters
- U Restricted by AAR or Owner
- W Restricted Due to Wheels
- X Restricted Due to Scrap or Early Warning
- Z Restricted Due to Umler Conflict (Not Valid for User Input)

#### NOTES:

- For further explanation reference Appendix D.2.
- The assignment of the Transportation Codes S\_, SX, XA, XZ and YA generate
  the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and
  mileage rate.

Sys Gen Routing Inst	TCGR
The routing instruction generated by the system	

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES

• For further explanation reference Appendix E.5.

#### Loading Authority Fleet Status B597

#### Identifies when a car is listed on a fleet in the Loading Authority application

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B597

- Y Yes
- S Suspended

#### NOTES:

- When equipment is on a fleet the Loading Authority (LA) application will update the flag to 'Y – Yes'. When equipment is removed from a fleet the LA application will remove the 'Y – Yes'.
- When equipment is on a LA fleet that is suspended the LA application will update the flag to 'S Suspended'. When the equipment is on a LA fleet that is no longer suspended the LA application will update the flag to 'Y Yes'.

## **Train Service**

Restricted Speed Empty

B180

Describes the maximum restricted speed the equipment can travel when empty

Range of Values for B180	
Minimum	Maximum
5	95

·	
Restricted Speed Loaded	B181

Describes the maximum restricted speed the equipment can travel when loaded

Range of Values for B181	
Minimum	Maximum
5	95

Shove Car to Rest	B189
Identifies the car must be moved to rest by locomotive	

#### Permissible Values for B189

Y Yes

Shove Adj. Car to Rest	B188
Identifies the adjacent car must be	e shoved to rest by locomotive

#### Permissible Values for B188

Y Yes

Train Position Sensitive	B211
Indicates there is a physical reason, limiting its position on a train	

#### Permissible Values for B211

/ Ye

#### End of Train Only B277

Indicates the equipment must be placed at the end of the train (including per AAR RP-2001)Permissible Values for B277

Yes

Check Trailing Tonnage	B044
Indicates the equipment has restrictions on trailing tonnage	

#### Permissible Values for B044

' Yes

Curve Negotiate Exception	B178
Describes the requirement for negotiating a curve	

#### Permissible Values for B178

- Restrictive Curve Negotiability, Section 2.1.4 of M-1001
- B Does not meet all Chapter XI Curving Requirements

## Cooper Rating Exception B273

Describes the cooper rating (weight distribution model of the equipment), for use in movement across bridges

#### Permissible Values for B273

- A Excessive Cooper Rating
- B Cooper Rating in Excess of E66

Clearance Exception	B275
Describes a section of the section of the section of the section	

#### Describes equipment containing nonstandard dimension

#### Permissible Values for B275

- A Excessive Outside Extreme Height (A185)
- B Excessive Outside Extreme Width (A186)
- D All other unique clearance issues
- E Hopper with excessive Outside Width (A186) only when pickup shoes are extended

#### Validation Rule for B275

 Clearance Exception of E can only be reported if Auto Unload Device Equip (B224) is reported.

#### NOTES

 For hoppers reporting a Clearance Exception (B275) of E, report the Plate Code (A046) that the equipment meets with the pickup shoes in the retracted position.

#### Loaded Net Braking Ratio B551

Indicates calculated minimum loaded net braking ratio per AAR Specifications in place on built or rebuilt date (in percent).

System Generated Field. This element is not eligible for input.

#### Permissible Values for B551

- 11.0
- -8.5

#### NOTES:

- Loaded Net Braking Ratio is determined as follows:
  - If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Loaded Net Braking Ratio will be set to blank.
  - If Built Date (BLDT) is greater than or equal to 1/1/1972 and less than 1/1/2004, than loaded Net Braking Ratio is 8.5%.
  - If Built Date (BLDT) or Rebuilt Date (RBDT) is greater than or equal to 1/1/2004, then Loaded Net Braking Ratio is 11.0%.

# Owner-Provided Loaded Net Braking Ratio B552 Indicates an alternate minimum loaded net braking ratio provided by owner (in

percent).

# Range of Values for B552 Minimum Maximum 8.5 14.0

#### NOTES:

• Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net

# Umler

#### **Data Specification Manual**

- Braking Ratio (B551).
- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - o Rebuilt Date (RBDT)
  - o Gross Rail Load/Weight (A266)
  - o Equipment Type Code (UMET)
  - Empty/Load Device Egpd (B075)

_		_		
Em	pty	Bra	king	Ratio

Indicates calculated empty braking ratio per AAR Specifications in place on built or rebuilt date (in percent) System Generated Field. This element is not eligible for input.

#### Range of Values for B553

Minimum	Maximum
15.0	38.0

#### NOTES:

- Empty Braking Ratio is determined as follows;:
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Empty Braking Ratio will be set to blank.

Owner-Provided	<b>Empty</b>	Braking	Ratio
----------------	--------------	---------	-------

**B554** 

Indicates an owner supplied alternate empty braking ratio (in percent).

#### Range of Values for B554

Minimum	Maximum
15.0	38.0

#### NOTES:

- Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net Braking Ratio (B551).
- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - Rebuilt Date (RBDT)
  - o Gross Rail Load/Weight (A266)
  - Equipment Type Code (UMET)
  - o Empty/Load Device Eqpd (B075)

## Truck Components

Axle Spacing Distance Mandatory	
---------------------------------	--

B020

The distance between axle centers on the same truck

#### Affects Rating.

## Permissible Values for B020

23	55 IIICHES
54	54 Inches
55	55 Inches
60	60 Inches
61	61 Inches
62	62 Inches

- 63 63 Inches 64 Inches
- 64 65 65 Inches 66 66 Inches
- 68 68 Inches
- 70 70 Inches 71 71 Inches
- 72 72 Inches 73 73 Inches
- 74 74 Inches
- 76 76 Inches 78 78 Inches
- 99 Axle Space Unknown

Truck Axle Count Mandatory	B252
The number of axles per truck	•

#### Range of Values for B252

Minimum	Maximum
2	4

#### Validation Rule for B252

- Sum of Truck Axle Count must equal Axle Count (A024)

Journal Size Mandatory	A147
The size of the journal bearing	•

#### Affects Rating.

#### Permissible Values for A147

Α	3-3/4 X 7	В	4-1/4 X 8	С	5 X 9
D	5-1/2 X 10	Ε	6X11	F	6-1/2 X 12
G	7 X 12	K	6-1/2X9	M	7 X 9

#### Validation Rule for A147

- -4-axle equipment with Journal Size B and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 103,000 lbs.
- -4-axle equipment with Journal Size C and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 142,000 lbs.
- -4-axle equipment with Journal Size D and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 177,000 lbs
- -4-axle equipment with Journal Size E and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 220,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 263,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1 or 2, must have Gross Rail Load (A266) of 286,000 lbs.
- -4-axle equipment with Journal Size G or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 315,000 lbs.
- -4-axle equipment with Journal Size G, K, or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1, must have Gross Rail Load (A266) of 286,000 lbs.

#### NOTES:

A, B and C Journal Classes are prohibited in Interchange per Rule 90.B.4

Wheel Diameter <i>Mandatory</i>	A294
The diameter of the wheels	

#### Affects Rating.

#### Permissible Values for A294

33 Inches 36 36 Inches

38 Inches

#### Validation Rule for A294

- -Equipment with Qualification for Increased Gross Rail Load (B344) of 1, and Journal Size (A147) of G or M, must have Wheel Diameter of 38 -Equipment with Qualification for Increased Gross Rail Load (B344) of 1,
- and Journal Size (A147) of K, must have Wheel Diameter of 36
- -If Connected Unit Count (A020) is not reported, different Wheel Diameters cannot be reported

#### **Stability Device Equipped B199** Indicates a stability device is present on the truck

#### Affects Rating.

#### Permissible Values for B199

Yes

Bolster Component ID	B351
Bolster Component ID from Component Registry	

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### **Sideframe Component ID** B352 Side Frame Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

**Wheelset Component ID** B350 Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Type F (Rule 18) - FF205E

#### Validation Rule for A057

- -If Rotary Coupler Style is reported, then Coupler Code must be a rotary coupler.
- -If Coupler Code is a rotary coupler, then Coupler Style must be R (Rotary).
   -Coupler Code of Type E Obsolete (Rule 16) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type E/F Obsolete (Rule 17) can only be reported if the car was built or rebuilt before July 31, 2015
- Coupler Code of Type F Obsolete (Rule 18) can only be reported if the car was built or rebuilt before July 31, 2015

 Coupler Code of FROTARY or EFROTARY cannot be reported for cars Built or Rebuilt on or after August 12, 2014.

#### NOTES:

- Obsolete: All Type D couplers are obsolete and should report code DOBS; cars with this coupler code will be restricted in interchange as discussed below
- Unknown: If the coupler code is unknown or if the code stamped on the coupler is illegible, the code BUNK FUNK, EFUNK, or LOCOUNK should be reported.
- Special: Codes ESPEC, FSPEC, and EFSPEC have been created to decline coupler bodies that have been manufactured specifically for the equipment owner and are not listed in the attached table.
- The codes FROTARY and EFROTARY cannot be reported for equipment Built or Rebuilt since August 12, 2014.

Coupler Style Mandatory

Describes the basic coupler design of the equipment

Used in ETC Generation. Affects Rating.

#### Permissible Values for B058

B Bottom Shelf D Double Shelf P Plain R Rotary

#### Validation Rule for B058

- -If Draft System Type (B073) is H (Hydraulic) then Coupler Style cannot be reported as M (Solid Drawbar) or L (Rotary Drawbar)
- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- -If Draft System Type (B073) of Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported

Inches of Travel B061
The number of inches a draft system will travel
Affects Rating.

## Range of Values for B061

Minimum Maximum
1 36

### Validation Rule for B061

- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- -If Draft System Type (B073) of Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported

Draft System Type Mandatory B073

Describes the draft gear/underframe cushion type

#### Affects Rating.

#### Permissible Values for B073

- C Cushioning Center of Car
- E Cushioning End of Car
- S Standard
- X Devices with less than 6 inches buff travel approved under AAR Standard S-060
- Y Devices with 6 to 10 inches of buff travel approved under AAR Standard S-060

#### Validation Rule for B073

- If Draft System Type (B073) is Standard Draft Gear (S), Inches of Travel (B061) cannot be reported
- If Draft System Type (B073) is reported as C, E, X, or Y then Inches of Travel (B061) must also be reported
- If Draft System Type (B073) of X, or Y is reported then Draft Gear Group/Cushion Unit Pocket (B562) cannot be reported
- If Draft System Type (B073) X is reported, the Inches of Travel (B061) value must be greater than or equal to 1 and less than 6
- If Draft System Type (B073) Y is reported, the Inches of Travel (B061) value must be greater than or equal to 6 and less than or equal to 10
- -If Draft System Type (B073) is S then Draft Gear Group/Cushion Unit Pocket (B562) may only be A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z (AAR Rule 21)
- -If Draft System Type (B073) is E then Draft Gear Group/Cushion Unit Pocket (B562) may only be EOC-1,EOC-1D, EOC-1B, EOC-2, EOC-2D, EOC-2B, EOC-3, EOC-3B,EOC-4, EOC-4B, EOC-5, EOC-5D, EOC-5B, EOC-6, EOC-6D, EOC-6B, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-8F, EOC-9,

EOC-9B, EOC-9D, EOC-9E, EOC-10, EOC-10D, EOC-10B, EOC-10F, EOC-11, EOC-11D, EOC-11B, EOC-12B, EOC-12B, EOC-13B, EOC-13B, EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16, EOC-16D, EOC-16B, EOC-17D, EOC-17D, EOC-17B, EOC-18D, EOC-18D, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-23, EOC-23B, EOC-24B, EOC-25E, EOC-26B, EOC-26F, or EOC-27D, or EOC-27E (AAR Rule 59)

A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, Z (AAR Rule 21).

#### Validation Rule(s) for B562

- Draft Gear Group/Cushion Unit Pocket (B562) is mandatory for equipment built on or after June 13, 2019, unless Draft System Type (B073) is reported as X or Y
- -If Draft Gear Group/Cushion Unit Pocket (B562) is not equal to A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z, then Cushion Unit Type (B563) must be populated
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-6, EOC-7, EOC-7B, EOC-8B, EOC-8B, EOC-9, EOC-9B, EOC-9D, EOC-10, EOC-10B, EOC-10D, EOC-14, EOC-14B, EOC-18D, EOC-23B, EOC-24B, EOC-25E, EOC-26B, or EOC-27D then the Cushion Unit Type (B563) must be 1
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-9E, EOC-26F, or EOC-27E, then the Cushion Unit Type (B563) must be 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-11, EOC-12, EOC-13, EOC-13B, EOC-15, EOC-15B, EOC-15D, EOC-17, EOC-17B, EOC-17D, EOC-17B, EOC-17D, EOC-18B, EOC-19, EOC-19B, EOC-20B, EOC-21, EOC-21B, EOC-22B, EOC-22B, EOC-24B, COC-3, COC-5, or COC-7 then the Cushion Unit Type (B563) must be 1 or 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-8F or EOC-10F then the Cushion Unit Type (B563) must be 2 or 3
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-5, EOC-5B, EOC-5D, EOC-6, EOC-6B, EOC-6D EOC-11B, EOC-11D, EOC-12B, EOC-12D, or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-16D, or COC-1 then the Cushion Unit Type (B563) must be 1, 2, or 4
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D, EOC-3, EOC-3B, EOC-4, EOC-4B, or COC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, or 4
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1, EOC-1B, EOC-1D, or EOC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or S
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-8 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or 5
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1D, EOC-2,EOC-2D, EOC-2B, EOC-3, EOC-3B, EOC-5, EOC-5D, EOC-5B, EOC-6D, EOC-7, EOC-7B, EOC-9, EOC-9B, EOC-9D, EOC-9E, EOC-10D, EOC-11, EOC-11B, EOC-11D, EOC-12D, EOC-14,EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16D, EOC-17D, EOC-23, EOC-23B, EOC-27D, or EOC-27E then the Inches of Travel (B061) must be 10
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-19, EOC-19B, EOC-22, EOC-22B, or EOC-25E then the inches of travel must be 12
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-20 or EOC-20B then the Inches of Travel (B061) must be 14
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1B, EOC-4, EOC-4B, EOC-6B, EOC-6B, EOC-8B, EOC-8B, EOC-10, EOC-10B, EOC-10F, EOC-12, EOC-12B, EOC-13, EOC-13B, EOC-17, EOC-17B, EOC-18B, EOC-18B, EOC-21, EOC-21B, EOC-24, or EOC-24B then the Inches of Travel (B061) must be 15
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-2, COC-3, COC-4, COC-5, COC-6, or COC-8 then the Inches of Travel (B061) must be 20

Unit Equipment Group	A307
Describes the equipment type of the platform	_

#### Affects Rating

#### Permissible Values for A307

BOXC	Box Car	FLAT	Flat Car
GOND	Gondola	HOPP	Hopper
IFLT	Intermodal Flat	TANK	Tank Car
VFLT	Vehicular Flat		

#### Validation Rule for A307

- -Unit Equipment Group cannot be reported if the Connected Unit Count (A020) is not reported
- -Unit Equipment Group must be reported if Connected Unit Count (A020) is reported

**Unit Tare Weight** Δ299 The unit segment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

#### Range of Values for A299 Min<u>imum</u> Maximum 23000 120000

#### Validation Rule for A299

- -Unit Tare Weight must not be reported if the Connected Unit Count (A020) is not reported
- -Unit Tare Weight must be reported if Connected Unit Count (A020) is reported
- -Unit Tare Weight for Hoppers must be greater than or equal 23,000 lbs.
- -Unit Tare Weight for Hoppers must be less than 120,000 lbs.
- -Unit Segment Tare Weights must add up to the Total Tare Weight (A259)
- -Unit Tare Weight (A299) value must be reported to the nearest 100 pounds

#### A300 **Unit Load Limit**

The maximum permissible weight of the commodity that can be loaded into the unit segment, reported in pounds

#### Range of Values for A300 Minimum Maximum 70000 300000

#### Validation Rule for A300

- -Unit Load Limit can not be reported if the Connected Unit Count (A020) is not reported
- -Unit Load Limit must be reported if Connected Unit Count (A020) is reported
- -Unit Segment Load Limits must add up to the Load Limit (LDLT)

Unit Cubic Feet Capacity	A065
The calculated interior dimensions of the unit segment in cubic feet	

=Mandatory ▲=Used in ETC Generation

# Umler<sup>°</sup>

#### **Data Specification Manual**

#### Range of Values for A065 Minimum Maximum 400 8500

#### Validation Rule for A065

- -Unit Cubic Feet Capacity must not be reported if the Connected Unit Count (A020) is not reported
- -Unit Cubic Feet Capacity requires Connected Unit Count (A020)
- -Unit Cubic Feet Capacity for Gondolas or Hoppers must be greater than or equal 400 cubic feet
- -Unit Cubic Feet Capacity for Hoppers must be less than or equal 8500 cubic feet
- -Unit Cubic Feet Capacity must add up to the Cubic Feet Capacity (A067).

ACTIVE INACTIVE 1

Ρ PRE-REGISTERED

#### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-Registered.
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID	0001
The equipment stenciled number	

#### Validation Rule for 0001

-Equipment Number must not be larger than 6 digits (i.e., 999999)

#### NOTES:

- Equipment ID includes the mark and number stenciled on the equipment. Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD999999)
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

**Built Date Mandatory** 

R2

RIDT

The date the construction of the equipment is complete

Data is Confidential. Used for Transportation Codes. Affects Rating. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for BLDT

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for BLDT

- -Built Date must be within the last 99 years
- -Built Date must not be in the future for equipment in Active Status
- -Prior and target equipment's Built Date (BLDT) must match for restenciling
- -Built Date cannot be updated within 30 days of the End of Service Date (B078)

#### NOTES:

- Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

Rebuilt / ILS Date **RBDT** The date the re-construction of the equipment is complete

Data is Confidential. Value does not carry forward for Single Clone / Multi-

## Range of Values for RBDT

Minimum	Maximum	
1/1/1900	12/31/9999	

#### Validation Rule for RBDT

- -Rebuilt/Increased Life Service Date must be after the Built Date (BLDT)
- -Rebuilt Date must not be more than 70 years after the Built Date (BLDT)
- -Rebuilt Date is required for Extended Service Code (A096) 1, 2, or 3 for Increased Life Service
- -Rebuilt Date is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years of service
- -If Rebuilt Date is reported then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life Service

#### NOTES:

- Railroad cars -- applicable only to cars meeting status as provided in both STB Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office Manual.
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt
  Date unless car has been approved by the AAR.

Rebuilt Flag RBFL

#### Identifies the equipment is nearing its end of life cycle

Data is Confidential. System Generated Field. This element is not eligible for Input.

#### **Permissible Values for RBFL**

N No Y Yes

Multi-Restencil.

Owner *Mandatory* UMOW

Primary reporting mark of the railroad or private company owning the car 
Value does not carry forward for Single Clone / Multi-Clone / Single Restencil /

#### NOTES:

 Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.

Equipment Group Mandatory 0002
Identifies the various major car types

Used for Transportation Codes. Affects Rating.

Lessee LESE
The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil /

## Multi-Restencil. Validation Rule for LESE

- -Umler Owner (UMOW) and Lessee are not allowed to be equal
- -Lessee cannot be a child reporting mark

Maintenance Party MNI

The parent reporting mark of the company responsible for the maintenance and repairs of the equipment

Does not Carry Forward.

Mark Owner Category B201

#### The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

#### Permissible Values for B201

- B US Private
- C Canadian Private
- F Foreign Private
- H Canadian Class II
- I Canadian Class I
- J Mexican Class I
- K Canadian Class III
- M Mexican Private
- N US Private Steamship
- O Canadian Private Steamship
- P Mexican Private Steamship
- Q Foreign Private Steamship
- R US Class II Railroad
- U US Class I Railroad
- V US Class III Railroad

- W Mexican Class II Railroad
- Y Mexican Class III Railroad

#### NOTES:

 This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry.

Prior Equipment ID

PRID

The previous reporting mark and number of the equipment

Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for PRID

- -Prior and target equipment's Built Date (BLDT) must match
- -The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

#### NOTES:

Prior ID enables equipment records to share the same historical lineage.
 Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

**Last Update Date** 

B122

Date of the last Umler element change

System Generated Field. This element is not eligible for Input.

**Equipment Add Date** 

B082

Date the reporting mark and number was added to the Umler system

System Generated Field. This element is not eligible for Input.

Status Change Reason

**USCR** 

Identifies the reason for the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

#### **Permissible Values for USCR**

- I Initial Load
- M Movement
- O Status Changed Manually
- R Restencil

#### NOTES:

- If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

**Status Change Date** 

USCT

## Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

**Extended Service Mandatory** 

A096

A code indicating the eligibility of an increase to the life cycle

Clone /

Used for Transportation Codes. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A096

- 1 1st ILS Inspection, additional 5 years of Service
- 2 2nd ILS Inspection, additional 5 years of service (10 years total)
- 3 3rd ILS Inspection, additional 5 years of service (15 years total)
- C Built New between January 1, 1964 June 30, 1974, Certified for 50 Years of Service, Built New Before July 1, 1974 & Received AAR Waiver
- E Built new from July 1,1974, Qualified for 50 Years Service
- N Built Before January 1, 1964, Qualified for 40 Years Service
- R Rule 88, Rebuilt cars
- U Built between January 1, 1964 June 30, 1974, Qualified for 40 Years & eligible for certification for 50 Years Service

Car is certified (FRA Waiver & AAR) for 65 years of service from date built new from January 1, 1964

#### Validation Rule for A096

- -If Rebuilt Date (RBDT) is reported, then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life
- -Extended Service Code of C cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974
- -Extended Service Code of E cannot be reported if the car was built before July 1, 1974
- -Extended Service Code of N cannot be reported if the car was built on/after January 1, 1964
- -Extended Service Code of U cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974

#### NOTES:

- Value is used to calculate End of Service Date (B078).
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years service.
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) 1, 2, 3, and V for Increased Life Service.

**End of Service Date** 

#### Indicates the date of the end of equipment life

Data is Confidential. System Generated Field. This element is not eligible for Input.

#### NOTES:

Data becomes non-confidential two years prior to End of Service Date.

**Equipment Identification EINN** 

### Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections

**Info Conflict Status** B355

Indicates that an Informational Conflict exists on the Equipment record

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

**Conflict Status** B050

Identifies the escalation level of equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B050

- Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- Subject to Deletion 3

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Date of Original Conflict** B063

The date the equipment was originally placed in the current conflict

System Generated Field. This element is not eligible for Input.

**Next Conflict Status B135** 

Identifies the next escalation level of an equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

Permissible Values for B135

- Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- · Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

B137 Notice Indicator

Identifies equipment in error in Umler Notice Management

System Generated Field. This element is not eligible for Input.

**Conflict Status Next Date** B062

The date the conflict status will be escalated

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**Rate Indicator** A070

#### Indicates the rate type applicable to the unit

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for A070

- Zero-Rated Due to Conflict Errors
- Zero-Rated Scrap (S\_,SX), AAR Overage (XA), FRA Overage (YA), Umler 6 Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].

#### NOTES:

B078

• If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.

**USAT First Movement Date** 

The first movement date under the stenciled mark of the equipment

This element is not eligible for Input. Does not Carry Forward.

B083 **Equipment Add Company** The reporting mark of the company that added the equipment

System Generated Field. This element is not eligible for Input.

**Registration Reason** The code indicating the reason this equipment is added

Does not Carry Forward.

#### Permissible Values for B174

Add-Back Ν New Ρ **Pending Restencil** R Restencil

**Restencil Program Ind** 

Identifies the equipment is under a restencil program

Permissible Values for B177

Yes

Delete Reason Code

B064

**B177** 

B174

A code that designates the reason the equipment has been deleted

Value does not carry forward for Add Back.

#### Permissible Values for B064

- Restenciled
- D Destroyed or wrecked
- Lease terminated, removed from fleet L
- Р Retired unserviceable beyond economic repair
- R Rebuilt
- S Sold Serviceable
- W Over age retired for dismantling
- Error, reporting did not exist

= Affects Rating

\*=Conditionally Mandatory

#### Z Other

#### **Non-Compliant Wheelsets**

B544

Equipment record is incomplete and has a missing wheelset component ID association. Refer to AAR Field Manual Rule 44 for industry requirements

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for B544

- -A Wheelset Component ID is required for each applicable location on equipment built on or after January 1, 2016
- -A Wheelset Component ID is required for each applicable location on equipment rebuilt on or after January 1, 2016 and Gross Rail Load (A266) is greater than 268,000 lbs

#### NOTES:

- A "Y" will be system generated if the equipment is active and the number of Wheelset CID's required is not equal to the Axle Count (A024) on the equipment
- Validation rule applies to equipment that has been in Active status for 60 days

## Weight

**Gross Rail Load/Weight** 

A266

The maximum permissible weight on rail of the equipment and the load, reported in pounds

#### Range of Values for A266

Minimum	Maximum	
9000	1000000	

### Validation Rule for A266

- -UnStarred 4 Axle Cars with a Journal Size of G must have a Gross Weight equal to 315,000 lbs.
- -Gross Rail Load must be equal to the Load Limit (LDLT) plus the Tare Weight (A259)

#### NOTES:

Use Table 1 below to determine Gross Rail Load, if Qualification for Increased Gross Rail Load (B344) does not exist.

TABLE 1 -

Journal Size	Load per Axle	Gross Rail Load for 4-
		axle Equipment
B - 4 1/2" x 8"	25,750 lbs.	103,000 lbs.
C - 5" x 9"	35,500 lbs.	142,000 lbs.
D - 5 1/2" x 10"	44,250 lbs.	177,000 lbs.
E - 6" x 11"	55,000 lbs.	220,000 lbs.
F - 6 1/2" x 12"	65,750 lbs.	263,000 lbs.
G - 7" x 12"	78,750 lbs.	315,000 lbs.
K - 6 1/2" x 9"	71,500 lbs.	263,000 lbs.
M - 7" x 9"	78,750 lbs.	315,000 lbs.

Use Table 2 below to determine Gross Rail Load for 4-axle equipment if Qualification for Increased Gross Rail Load (B344) exists.

TABLE 2 -

Qualification for	Journal Size	Gross Rail Load
Increased Gross Rail		
Load (B344)		
1	K - 6 1/2" x 9"	286,000 lbs.
1	G - 7" x 12"	286,000 lbs.
1	M - 7" x 9"	286,000 lbs.
2	F - 6 1/2" x 12"	286,000 lbs.
2	K - 6 1/2" x 9"	286,000 lbs.
3	F - 6 1/2" x 12"	268,000 lbs.
3	K - 6 1/2" x 9"	268,000 lbs.

• For multi-unit equipment, report the total gross rail load for the entire set.

• Refer to Field Manual Rule 70 if additional information is required.

A Gross Rail Load less than the listed or calculated values may be entered; however:

- Star Code (A247) must be R or S, and
- Load Limit (LDLT) must also be reduced, ensuring Tare Weight (A259) plus Load Limit (LDLT) equals the reported Gross Rail Load.

For equipment having two or more different journal sizes, see following examples:

Example for Drawbar Connected:

- A 3-unit drawbar connected car has 12 axles.
- The end units (Locations A and B) each have 4 axles with E 6" x 11" journals.
- The intermediate unit (Locations C) has 4 axles with F 6 1/2" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

8 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 440,000 lbs. + 4 ea. F-6 1/2" x 12" journal axles X 65,750 lbs. per axle = 263,000 lbs. Gross Rail Load = 703,000 lbs.

Example for Articulated Connected:

- A 5-unit articulated intermodal car has 6 trucks (12 axles).
- The end trucks (Locations A and B) each have 2 axles with E 6" x 11" journals.
- The intermediate trucks (Locations C, D, E, and F) each have 2 axles with G
   -7" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

4 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 220,000 lbs. +8 ea. G-7" x 12" journal axles X 78,750 lbs. per axle = 630,000 lbs. Gross Rail Load = 850,000 lbs.

#### **Tare Weight**

A259

The equipment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

#### Range of Values for A259

Minimum	Maximum	
16000	500000	

#### Validation Rule for A259

 - Tare Weight (A259) value must be reported to the nearest 100 pounds if Weighing Date (A288).

#### NOTES:

- Do not report an average Tare Wt. for car series, except for Pre-Registered cars
- When cars are made active, the actual Tare Wt. must be recorded

#### **Load Limit Mandatory**

LDLT

The maximum permissible weight of the commodity that can be loaded into the equipment, reported in pounds

#### Range of Values for LDLT

Minimum	Maximum
8000	999900

### NOTES:

 For connected unit cars report the sum of the load limits for all units in the set.

Weighing Status Mandatory

A289

Indicates the weight information is an estimate or an actual measurement

Value does not carry forward for Single Clone / Multi-Clone.

=Mandatory

# **Umler**

#### **Data Specification Manual**

#### Permissible Values for A289

- Actual
- F **Estimated**
- Verified correct Tare Weight V
- Tare Weight subject to verification (System Generated)

#### Validation Rule for A289

-Equipment cannot be within a series of 10 with identical Tare Weights (A259), refer to Appendix P for further information on resolving tare weight conflicts

Weighing Date	A288
The date the equipment was actually weighed	

Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A288

Minimum	Maximum		
1/1/1900	12/31/9999		

#### Validation Rule for A288

- -If Weighing Date is reported the Tare Weight (A259) must be reported
- -When Weighing Date is reported then Weighing Status (A289) must be A (Actual) or V (Verified)
- -If Weighing Status (A289) is A (Actual) or V (Verified correct Tare Weight) then Weighing Date must be reported
- -Weighing Date must be on or before the current date
- -Weighing Date cannot be before Built / Rebuilt date

Cubic Feet Capacity	A067
The maximum interior cubic feet capacity of the equipment	

#### NOTES:

For connected unit cars report the sum of all units cubic capacity.

Δ247 Indicates a reduction of the Load Limit (LDLT) of the equipment per AAR Rule 70

Affects Rating.

#### Permissible Values for A247

- R Body Capacity less than Truck Capacity
- Reduced Load Limit

#### Validation Rule for A247

- -4-axle Cars with Star Codes of S or R must not exceed Gross Weight of 263,000 lbs. when Journal Size is A, B, C, D, or E
- -Journal Sizes having Star Code of S must have a Gross Weight that is less than the calculated Gross Weight with rounding applied
- -UnStarred 4 Axle Cars reporting Increased Gross Rail Load (IGRL) of 2 or 3 must have a Gross Weight greater than or equal to 264,000 lbs.
- -Starred 4 axle cars with IGRL of 1 must have a Wheel Size of 36 inches when Gross Weight is less than 286,000 lbs.
- -Starred 4 Axle Cars with Increased Gross Rail Load (IGRL) reported must have a Journal Size of K, G, or M

Qual for Inc GRL **B344** 

AAR qualification for increased Rail Load Code designating AAR approval for operating 4-axle equipment at a gross rail load greater than 263,000 lbs per AAR Rule 88

### Permissible Values for B344

- Rule 88 IGRL Code 1 (> 263,000 lbs. and <= 286,000 lbs. GRL per AAR Specification S-286)
- Rule 88 IGRL Code 2 (> 263,000 lbs. and <= 286,000 lbs. GRL)
- Rule 88 IGRL Code 3 (> 263,000 lbs. and <= 268,000 lbs. GRL)

#### Validation Rule for B344

- -4-axle Cars reporting Increased Gross Rail Load (IGRL) of 3, or reporting IGRL of 1 or 2 and having an S Star Code must have a Gross Weight that does not exceed 286,000 lbs.
- -4-axle Cars with Increased Gross Rail Load (IGRL) of 2 or 3 must have a Journal Size of F or K
- -4-axle Rule 88 Cars require a Wheel Size of 36 or 38 inches for Gross Weight greater than 263,000 and less than or equal to 286,000 lbs.

- -4-axle Cars with Increased Gross Rail Load (IGRL) of 1 or 2 having no Star Code and a Journal Size of other than F or K, must have a Gross Weight greater than or equal to 263,000 lbs. and less than or equal to 286,000 lbs.
- -4-axle equipment with Increased Gross Rail Load (IGRL) of 1 and having no Star Code (A247) must have a Journal Size (A147) of G, K, or M
- -4-axle equipment having Qualification for Increased Gross Rail Load of 2 or 3 must have a Journal Size (A147) of F or K
- -Unstarred 4 Axle Cars with Increased Gross Rail Load of 2 or IGRL of 1 and Journal Size K must have a Wheel Size of 36 inches
- -Unstarred 4 Axle Cars with GRL of 315,000 and no IGRL reported and Unstarred cars with Journal Size of G or M must have a Wheel Size of 38 inches
- -Unstarred 4 axle cars must report Qualifications for Increased GRL if the GRL is between 263,000 and 315,000

## Dimension

Plate Code Mandatory

A046

Miscellaneous Cars

Indicates the extreme height and width clearance of the equipment

#### Permissible Values for A046

- Plate Code B
- C Plate Code C
- Ε Plate Code E
- F Plate Code F
- G Clearance Code G
- Н Plate Code H
- Plate Code J J
- Κ Plate Code K
- Plate Code L
- М Plate Code M
- Ν Plate Code N

### NOTES:

- For a description of Plate Codes, please see Appendix J at the back of this manual.
  - o Report B: If clearance does not exceed Plate B
  - o Report C: If clearance is greater than Plate B. but does not exceed Plate C
  - o Report E: If clearance is greater than Plates B and C, but does not exceed Plate E.
  - o Report F: If clearance is greater than Plates B, C and E, but does not exceed Plate F
  - o Report G: If clearance exceeds Plates B, C, E, F. and N.
  - Report N: If clearance is greater than Plates B, C, E, and F, but does not exceed Plate N.
- There is no AAR Plate G. Clearance Code G is included in Umler to represent equipment that does not fit any existing AAR clearance plates.
- For ARTICULATED/MULTI-UNIT SET report the most restrictive clearance plate of UNIT in the set.

**Outside Length Mandatory** 

**OSLG** 

The outside length over pulling faces of couplers in normal position

Affects Rating. Displayed in feet and inches on the Web. Stored in inches. Range of Values for OSLG

Minimum Maximum 13 ft 0 inches 225 ft 0 inches

- For connected unit cars report the maximum coupled length of the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

**Outside Extreme Width Mandatory** 

A186

The outside extreme width of the equipment

Displayed in feet and inches on the Web. Stored in inches. Range of Values for A186

Minimum	Maximum		
7 ft 0 inches	11 ft 10 inches		

Validation Rule for A186

=Mandatory ▲=Used in ETC Generation

- -Outside Extreme Width must not exceed 10 feet 8 inches for Plate Codes B, C, E, F, or N
- -Outside Extreme Width (A186) for Plate Code A must not be less than 10 feet 8 inches.
- -Outside Extreme Width (A186) for Plate Code A must not exceed 10 feet 10 inches

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

# Outside Extreme Height A185 Height from top of rail to extreme projecting height

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A185

Minimum	Maximum
2 ft 0 inches	21 ft 0 inches

#### Validation Rule for A185

- -Outside Extreme Height for Plate Codes A, B, or H must be less than or equal to 15 feet 1 inch
- -Outside Extreme Height for Plate Codes C or I must be less than or equal to 15 feet 6 inches
- -Outside Extreme Height for Plate Code E must be less than or equal to 15 feet 9 inches
- -Outside Extreme Height for Plate Code F must be less than or equal to 17 feet 0 inch
- Outside Extreme Height for Plate Code N must be less than or equal to 17 feet 1 inch

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

Outside Height Extr Width	A187
The highest point at which the extreme width of the equipment occurs	

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A187

Minimum	Maximum
1 ft 0 inches	18 ft 0 inches

#### **Validation Rule for A187**

- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 8 inches if Outside Height Extreme Width is 13 feet 10 inches or less
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 7 inches if Outside Height Extreme Width is 13 feet 11 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 0 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 4 inches if Outside Height Extreme Width is 14 feet 1 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 2 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 3 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 4 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 9 inches if Outside Height Extreme Width is 14 feet 5 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 5 inches if Outside Height Extreme Width is 14 feet 6 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 2 inches if Outside Height Extreme Width is 14 feet 7 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 10 inches if Outside Height Extreme Width is 14 feet 8 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 6 inches if Outside Height Extreme Width is 14 feet 9 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 3 inches if Outside Height Extreme Width is 14 feet 10 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 11 inches if Outside Height Extreme Width is 14 feet 11 inches

- -Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 6 inches if Outside Height Extreme Width is 15 feet 0 inches
- Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 4 inches if Outside Height Extreme Width is 15 feet 1 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 8 inches if Outside Height Extreme Width is 14 feet 3 inches or less
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 7 inches if Outside Height Extreme Width is 14 feet 4 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 5 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 4 inches if Outside Height Extreme Width is 14 feet 6 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 7 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 8 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 9 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 9 feet 9 inches if Outside Height Extreme Width is 14 feet 10 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 9 feet 5 inches if Outside Height Extreme Width is 14 feet 11 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 9 feet 2 inches if Outside Height Extreme Width is 15 feet 0 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 8 feet 10 inches if Outside Height Extreme Width is 15 feet 1 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 8 feet 6 inches if Outside Height Extreme Width is 15 feet 2 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 8 feet 3 inches if Outside Height Extreme Width is 15 feet 3 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 11 inches if Outside Height Extreme Width is 15 feet 4 inches
- Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 8 inches if Outside Height Extreme Width is 15 feet 5 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 4 inches if Outside Height Extreme Width is 15 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 8 inches if Outside Height Extreme Width is 15 feet 2 inches or less
- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 6 inches if Outside Height Extreme Width is 15 feet 3 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 3 inches if Outside Height Extreme Width is 15 feet 4 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 9 feet 6 inches if Outside Height Extreme Width is 15 feet 5 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 8 feet 8 inches if Outside Height Extreme Width is 15 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 7 feet 11
- inches if Outside Height Extreme Width is 15 feet 7 inches -Outside Extreme Width (A186) for Plate Code E must not exceed 7 feet 1  $\,$
- inches if Outside Height Extreme Width is 15 feet 8 inches
  -Outside Extreme Width (A186) for Plate Code E must not exceed 6 feet 3
- inches if Outside Height Extreme Width is 15 feet 9 inches
  -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 8
- inches if Outside Height Extreme Width is 16 feet 3 inches or less
  -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 7
- inches if Outside Height Extreme Width is between 16 feet and 4 inches and 16 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 6 inches if Outside Height Extreme Width is 16 feet 7 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 3 inches if Outside Height Extreme Width is 16 feet 8 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 0 inches if Outside Height Extreme Width is 16 feet 9 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 8 inches if Outside Height Extreme Width is 16 feet 10 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 5 inches if Outside Height Extreme Width is 16 feet 11inches

- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 2 inches if Outside Height Extreme Width is 17 feet 0 inches
- -Outside Extreme Width (A186) for Plate Code J must not exceed 10 feet 8
- inches if Outside Height Extreme Width is 16 feet 4 inches or less -Outside Extreme Width (A186) for Plate Code K must not exceed 10 feet 8 inches if Outside Height Extreme Width is 18 feet 5 inches or less
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 8 inches if Outside Height Extreme Width (A187) is 16 feet 9 inches or less
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 6 inches if Outside Height Extreme Width (A187) is 16 feet 10 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 4 inches if Outside Height Extreme Width (A187) is 16 feet 11 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 2 inches if Outside Height Extreme Width (A187) is 17 feet 0 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 9 feet 11 inches if Outside Height Extreme Width (A187) is 17 feet 1 inch

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

Outside	Upper	Eaves	Width

A194

The width between the outside uppermost corners of the equipment

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A194

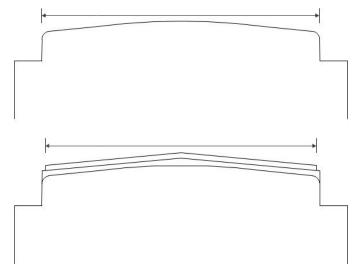

Minimum	Maximum
4 ft 0 inches	10 ft 10 inches

#### Validation Rule for A194

- -Outside Upper Eaves Width must be less than or equal to the Outside Extreme Width (A186)
- -Outside Upper Eaves Width must be less than or equal to the Outside Lower Eaves Width (A190)
- -Outside Upper Eaves Width for Plate Code A must not exceed 10 feet 10 inches
- -Outside Upper Eaves Width for Plate Code B, C, E, F, H, or I must not exceed 10 feet 8 inches
- -Outside Upper Eaves Width for Plate Code N must not exceed 10 feet 8 inches if Outside Upper Eaves Height (A193) is 16 feet 9 inches or less
- -Outside Upper Eaves Width for Plate Code N must not exceed 10 feet 6 inches if Outside Upper Eaves Height (A193) is 16 feet 10 inches
- -Outside Upper Eaves Width for Plate Code N must not exceed 10 feet 4 inches if Outside Upper Eaves Height (A193) is 16 feet 11 inches
- -Outside Upper Eaves Width for Plate Code N must not exceed 10 feet 2 inches if Outside Upper Eaves Height (A193) is 17 feet 0 inches
- -Outside Upper Eaves Width for Plate Code N must not exceed 9 feet 11 inches if Outside Upper Eaves Height (A193) is 17 feet 1 inch

#### NOTES:

• For connected unit cars report the dimension of the largest unit in the set

**Outside Upper Eaves Hght** A193 Height from the top of rail to the uppermost outside corner of the equipment

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A193

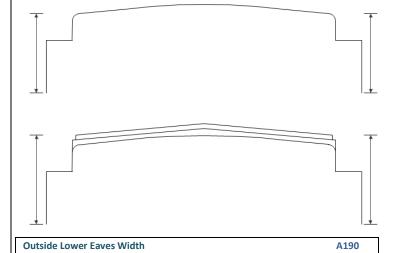

Minimum	Maximum
2 ft 0 inches	17 ft 11 inches

#### Validation Rule for A193

- -Outside Upper Eaves Height must not exceed the Outside Extreme Height -Outside Upper Eaves Height must be greater than or equal to the Outside Lower Eaves Height (A189)
- -Outside Upper Eaves Height for Plate Codes A, B, or H must not exceed 15 feet 1 inch
- -Outside Upper Eaves Height for Plate Codes C or I must not exceed 15 feet 6 inches
- -Outside Upper Eaves Height for Plate Code E must not exceed 15 feet 9 inches
- -Outside Upper Eaves Height for Plate Code F must not exceed 17 feet 0 inches
- -Outside Upper Eaves Height for Plate Code N must not exceed 17 feet 1

#### NOTES:

• For connected unit cars report the dimension of the largest unit in the set.

Width over lower eaves at sides of car (see diagram)

Displayed in feet and inches on the Web. Stored in inches.

Range of Values for A190

Minimum	Maximum
7 ft 0 inches	10 ft 10 inches

#### Validation Rule for A190

- -Outside Lower Eaves Width must not exceed the Outside Extreme Width (A186)
- -Outside Lower Eaves Width for Plate Code A must not exceed 10 feet 10 inches
- -Outside Lower Eaves Width for Plate Codes B, C, E, F, H, or I must not exceed 10 feet 8 inches
- -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 16 feet 9 inches or less
- -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 6 inches if Outside Lower Eaves Height (A189) is 16 feet 10 inches
- -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 4 inches if Outside Lower Eaves Height (A189) is 16 feet 11 inches
- -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 2 inches if Outside Lower Eaves Height (A189) is 17 feet 0 inches
- -Outside Lower Eaves Width for Plate Code N must not exceed 9 feet 11 inches if Outside Lower Eaves Height (A189) is 17 feet 1 inch

#### NOTES:

- Round fraction to the higher inch, e.g., 05 1/4" = 06"
- For connected unit cars report the dimension of the largest unit in the set.

Outside Lower Eaves Hght	A189
Height from top of rail to lower eaves at side of car (see diagrams)	
Displayed in feet and inches on the Web. Stored in inches.	

#### Range of Values for A189

Minimum	Maximum
8 ft 0 inches	17 ft 11 inches

#### Validation Rule for A189

- -Outside Lower Eaves Height must not exceed the Outside Extreme Height (A185)
- -Outside Lower Eaves Height for Plate Codes A, B or H must not exceed 15 feet 1 inch
- -Outside Lower Eaves Height for Plate Codes C or I must not exceed 15 feet 6 inches
- -Outside Lower Eaves Height for Plate Code E must not exceed 15 feet 9 inches
- -Outside Lower Eaves Height for Plate Code F must not exceed 17 feet 0 inches
- -Outside Lower Eaves Height for Plate Code N must not exceed 17 feet 1 inch

#### NOTES:

- Round fraction to the higher inch, e.g., 05 1/4" = 06"
- For connected unit cars report the dimension of the largest unit in the set.

Inside Length	A135
The inside length of the equipment from end to end inside v permanent bulkheads	valls, linings, and
Displayed in feet and inches on the Web. Stored in inches.	

## Range of Values for A135

Minimum	Maximum
19 ft 0 inches	99 ft 3 inches

#### Validation Rule for A135

 -Inside Length/Inside Platform Length must be less than or equal to Outside Length (OSLG)

#### NOTES:

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the shortest dimension of a unit in the set.

Inside Width	A138
The inside width of the equipment from side walls and linings	

Displayed in feet and inches on the Web. Stored in inches.

Range of Values for A138
Minimum Maximum

4 ft 0 inches 12 ft 6 inches

#### Validation Rule for A138

-Inside Width/Inside Platform Width must not exceed Outside Extreme Width

#### NOTES

• For connected unit cars report the shortest dimension of a unit in the set.

Inside Height A133

The inside height of the equipment from the floor to the top of the side, or to the lowest point of the interior ceiling

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A133

Minimum	Maximum	
1 ft 0 inches	15 ft 10 inches	

#### Validation Rule for A133

-Inside Height must not exceed Outside Extreme Height (A185)

#### NOTES:

• For connected unit cars report the shortest dimension of a unit in the set.

Truck Center Length	A276
The length between the centers of the two truck systems	

The length between the centers of the two truck systems

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A276

Minimum	Maximum	
15 ft 0 inches	76 ft 11 inches	

#### Validation Rule for A276

- -Truck Center Length is required for cars with an Outside Length of greater than 62 feet 6 inches
- -Truck Center Length must be a minimum of 15 feet for cars with an Outside Length greater than 62 feet 6 inches

#### NOTES

• For connected unit cars report the dimension of the largest unit in the set.

Platform Hght Above Rail	A192
Describes the platform height above the rail in inches	<b>A</b>

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A192

Minimum	Maximum
2 ft 0 inches	8 ft 10 inches

#### Validation Rule for A192

-Platform Height cannot be greater than Outside Height

#### NOTES:

 EXCEPTIONS: For bi-level and tri-level flat cars, measurement is from top of rail to top of floor of lower deck. Feet in Pos. 45-46, inches in Pos. 47-48.
 Round fraction to the higher inch, e.g., 05 1/4" = 06". This field must agree relationally for V\_ \_ \_ Equipment Type Codes and P\_ \_ \_.

P	MINIMUM—1ft 1in MAXIMUM—4ft
	9in
Q	MINIMUM—10in MAXIMUM—4ft
S	MINIMUM—10in MAXIMUM—4ft

All F_3_, F_6_ and F_9_	MINIMUM—2ft MAXIMUM—8ft 11in
Q8	MINIMUM—2ft 6in MAXIMUM—5ft
P1, P2, P5, P6	MINIMUM—2ft MAXIMUM—3ft 3in
P3, P4, P7, P8	MINIMUM—3ft 4in MAXIMUM—5ft
	11in
P9	MINIMUM—3ft 2in MAXIMUM—3ft
	2in
Q_1_	MINIMUM—2ft MAXIMUM—2ft 8in

 See diagram below for place of measurement on depressed cars (Equipment Type Code F\_3\_, F\_9) and well cars (Equipment Type Code F\_6\_).

●=Mandatory ▲=Used in ETC Generation

Bulkhead Top Width	B038
Describes the width of the bulkhead	

Value does not carry forward for Equipment Group Change.

#### Range of Values for B038

Minimum	Maximum	
25	139	

Bulkhd Height Abov Pltfrm	B035
Describes the height of the bulkhead	

Value does not carry forward for Equipment Group Change.

## Range of Values for B035 Minimum | Maximum

36	195		
		Specification	

The total number of trucks on the equipment System Generated Field. This element is not eligible for Input.

#### Range of Values for B256

**Truck Count** 

Minimum	Maximum
1	30

Axle Count Mandatory	A024
The total number of axles on the equipment	•

## Range of Values for A024

Minimum	Maximum
2	999

#### Validation Rule for A024

- -Axle Count for an articulated car must be greater than or equal to  $((Connected Unit Count (A020) \times 2) + 2)$
- -Axle Count for a draw bar connected car must be greater than or equal to (Connected Unit Count (A020) x 4)
- -Total Axle Count must match sum of truck axle counts

Wheel Bearing Type Mandatory	B191
Indicates the wheel bearing journal design for the equipment	•-

Affects Rating.

#### Permissible Values for B191

P Plain R Roller

#### Validation Rule for B191

- -Cars with Plain Bearings will have a Transportation Code (TCOD) and Transportation Condition Code (TCCD) of either YA, S\_, SX, or XJ
- -Equipment cannot have Plain Bearings if Built Date (BLDT) is on or after January 1, 1993

Bearing Shielded From HBD	B021
Indicates the wheel bearings are shielded from wayside hot bo	x detectors

#### Permissible Values for B021

Y Yes

Brake Shoe Type Mandatory	B026
Indicates the type of brake shoe on the equipment	•

#### Permissible Values for B026

C Tread Conditioning

H High Friction Composite

L Low Friction Composite/Cast Iron

## CC Side Bearing Type

Indicates the travel range of the constant contact side bearings installed on the equipment

#### Permissible Values for A146

- LC Long Travel Constant Contact
- SC Short Travel Constant Contact

#### Validation Rule for A146

 -Equipment having Qualification for Increased Gross Rail Load (B344) of 1 must have Constant Contact Side Bearing Type of LC

#### **Empty/Load Device Egpd**

B075

A146

Indicates that the air brake system includes a device to determine if the equipment is empty or loaded, and then varies the braking forces accordingly

#### Permissible Values for B075

Yes

**B256** 

# Body Material A030 The material that composes the body of the equipment

#### Permissible Values for A030

- 01 Aluminum
- 04 Combination
- 09 Fiberglass Reinforced Composite
- 18 Stainless Steel
- 19 Standard Steel
- 30 Wood

## Center of Gravity Empty

A045

When empty, indicates the height from Top of Rail to the Center of Gravity

#### Range of Values for A045

Minimum	Maximum
22	80

#### Validation Rule for A045

-All cars that exceed Plate Code (A046) C built on or after January 1, 2012 must report Center of Gravity (Empty Car)

#### **Remote Monitoring Device**

B176

Indicates the equipment has a device that transmits a signal or records data

#### Permissible Values for B176

Y Yes

N No

#### NOTES:

 Per AAR S-2045, This may be data related to ride quality, geographic location, temperature/condition of the load, load/empty status, etc.

#### **Auto Unload Device Equip**

B224

Identifies whether non-covered Hoppers have an automatic unloading device

#### Permissible Values for B224

/ Yes

#### **Connected Unit Count**

A020

Indicates the number of units within an articulated or multi-unit equipment

### Affects Rating.

### Range of Values for A020

IVIII	imum	Maximum
2		45

#### Validation Rule for A020

- -Connected Unit Count must equal the number of Unit Segments
- -Unit Segment Component elements must not be reported if the Connected Unit Count is not reported

-Unit Segment Component elements must be reported if Connected Unit Count is reported

#### **Intermediate Conn Style**

B115

Indicates the method by which two or more pieces of equipment are connected

#### Permissible Values for B115

- A Articulated Connector
- D Drawbar Connector

#### Validation Rule for B115

- -Intermediate Connector Style is required for multi-unit equipment
- -Intermediate Connector Style must not be reported for single unit equipment

#### Operating Brakes Mandatory

A182

The number of air brake control valves on the equipment (excludes hand brakes). One control valve consists of a service portion, emergency portion, and pipe bracket. Example: DB-60 control valve

#### Permissible Values for A182

1	2	3	4	5
6	7	8	9	

#### Validation Rule for A182

- -Operating Brakes must be reported for all equipment
- -Operating Brakes (A182) must be 1 for non-articulated equipment with an Axle Count (A024) equal to 4

#### NOTES:

• Excludes empty/load device, number 8 vent valve, and proportion valve.

ECP Brake Type	B327
Indicates the type of electronic controlled pneumatic brake used on th	e
equipment	

#### Permissible Values for B327

- N Not Equipped
- O Overlay Both ECP & Air Brake
- S Stand Alone ECP Only

#### Validation Rule for B327

-Equipment must have a value entered for ECP Brake Type if built or rebuilt after June 28, 2012

#### ECP Brake Builder B328

The manufacturer of the electronic controlled pneumatic brake used on the equipment

#### Permissible Values for B328

NYAB New York Air Brake WABT WABTEC

#### Validation Rule for B328

- -If ECP Brake Type (B327) is Stand Alone or Overlay then a value must be entered for ECP Brake Builder
- -If ECP Brake Type (B327) is Not Equipped then ECP Brake Builder is not reportable

## Slack Adjuster Group B538

The slack adjuster group on the equipment per AAR Field Manual Rule #8

Value does not carry forward for Single Clone / Multi-Clone.

#### **Permissible Values for B538**

Α	Group A	В	Group B	С	Group C	D	Group D	
Ε	Group E	F	Group F	G	Group G	Н	Group H	
J	Group J	L	Group L	M	Group M	Ν	Group N	
0	Group O	Р	Group P	Q	Group Q	R	Group R	
1	Internal	2	Unequipped					

#### Validation Rule for B538

- Slack Adjuster Group is mandatory for all equipment built or rebuilt on or after January 1, 2016
- If Slack Adjuster Group is reported as "1" then Brake Cylinder Mount Type (B540) must be reported as "T"

- If Slack Adjuster Group is "1" or "2", then Slack Adjuster CID (B359) must not be reported.

#### NOTES:

 Permissible value of "1 – Internal" identifies special truck mounted internal slack adjuster within brake cylinder.

Brake Cylinder Mount Type	B540
Identifies the location of the brake cylinder	

#### Permissible Values for B540

B Body MountedT Truck Mounted

#### Validation Rule for B540

- Brake Cylinder Mount Type is mandatory for all equipment built or rebuilt on or after January 1, 2016

Equipment Builder	A035
Identifies the original manufacturer of the equipment	

#### Permissible Values for A035

#### Validation Rule for A035

- -Equipment Builder must be populated if the Built Date (BLDT) is July 1, 2010 or newer
- -Equipment built or rebuilt on or after July 1, 2010 cannot have a Equipment Builder of Unknown
- -Equipment with a Built Date (BLDT) on or after July 1, 2010 cannot have an Equipment Builder Code of OWNER RAILROAD.

-Equipment Builder can have a value of MULT only if the equipment has

#### NOTES:

• If 'M999' is utilized, please email csc@railinc.com to introduce a new value to Equipment Builder (A035) for the Miscellaneous Equipment Group.

**Builder Lot Code** 

A unique identifier for a group of equipment built by one manufacturer under the same contract

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

**FRA Reflectorization** B096 Indicates the equipment owner assumes responsibility for applying reflectorization tape

#### Permissible Values for B096

- Reflectorization Plan
- Reflectorization Waiver W

#### Validation Rule for B096

-Reflectorization is mandatory for all equipment after November 28, 2015.

**B524** Air Hose Arrangement The type of trainline air hose arrangement

#### Permissible Values for B524

- S-424 Angle Cock Location Α
- S-425 Angle Cock Location on Cars Equipped with AAR Type F Coupler
- C S-426 Angle Cock Location on Cars with Floating Sills
- D S-427 Angle Cock and Air Brake Hose Location on Cars with Excessive Overhang Preventing Compliance with AAR Standards
- Ε S-428 Angle Cock Location on Cars Equipped with AAR Type F Coupler and Cushioned Underframe
- F S-4003 (Former Standard)
- G S-4003x (Former Standard Retrofitted to Meet All Dimensions Except Height)
- Н S-4003-05 (Current Standard Train Line Arrangement for Cars with F-Shank Couplers)
- S-4021 Angle Cock and Brake Hose Location on Cars with EOCC (E and
- S-4021 Coupler Mounted Bracket End Arrangement
- Κ S-4028 Train Line Arrangement with Displaceable Union on Cars with EOCC and Couplers Not Exceeding 45 in. in Length
- L S-4029 Train Line Arrangement with Displaceable Union on Cars with EOCC and Couplers Exceeding 45 in. in Length
- S-4030 Trolley Arrangement on Cars with EOCC and E-Shank Couplers

#### Validation Rule for B524

-Air Hose Arrangement must be reported for this equipment if it is Built or Rebuilt on or after April 22, 2014.

### NOTES:

- If any of the following conditions apply, Air Hose Arrangement (B524) must be reported for cars Built or Rebuilt on or after April 22, 2014:
  - ° Draft Gear Type (B073) at any location is C or E.
  - ° Connected Unit Count (A020) is reported.
  - Outside Length (OSLG) is greater than or equal to 70 feet (840 inches).
  - The overhang is greater than 5 feet 6 inches (66 inches). Overhang is calculated as follows:
  - 0.5 \* (Outside Length, in inches, minus Truck Center Length, in inches, minus 31 inches)
  - For all other equipment, reporting Air Hose Arrangement is optional.

4-Pressure ABT Receiver Eqpd B539 Identifies if the equipment is equipped with a 4-pressure air brake test receiver

Value does not carry forward for Single Clone / Multi-Clone.

## Permissible Values for B539

- Ε Equipped
- Ν Not Equipped

• An "E" will be system generated if a 4-Pressure ABT is reported on the equipment.

### **Feature**

Floor Material A104 Describes the type of construction material used for the equipment floor

#### Permissible Values for A104

- 01 Aluminum
- Aluminum (Ribbed) 02
- 05 Composite Nailable (considered same as wood
- 06 Composite Nailable, Reinforced (considered same as wood)
- 14 Other
- 15 Other, Reinforced
- 19 Standard Steel
- 21 Steel Floor, (straight deck) without risers (F-8-)
- 22 Steel Floor, permanently mounted steel risers (F-8-)
- 23 Steel Nailable (includes alternate wood and steel floor
- 24 Steel Nailable, Reinforced (includes alternate wood and steel floor
- 25 Standard Steel, Reinforced
- 27 Unknown (Flats only)
- 30 Wood
- 32 Wood, Double
- 33 Wood, Double, Reinforced
- 34 Wood Floor with Steel Protective Plates (includes perforated steel)
- 35 Wood Floor, Reinforced, with Steel Protective Plates (includes perforated steel)
- 36 Wood Floor, Reinforced

#### NOTES:

• If Mechanical Designation (UMMD) is FBC and Floor material is 22 (Steel w/Risers), Steel Riser Equipped (B200) in not reportable.

**Bulkhead Type** B034 Identifies the type of bulkhead attached to the equipment

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B034

Fixed with Flipper Fixed L

#### Cost

**Original Cost** A184 The original manufacturer selling price

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A184

Minimum	Maximum
0	9999999

#### Validation Rule for A184

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported.
- -Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost
- -Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

#### NOTES:

- Original Cost is never altered. It is the cost of the equipment to the original
- For railroad-marked cars, report in US dollars the original ledger value of the original owner For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24
- The original cost is used in the settlement of AAR Interchange Rule 107 Office

- For connected unit cars report the total original cost for all units in the set.
- Numeric, applicable to all railroad-marked cars Also, applicable to privately marked covered hopper (LO) cars.
- Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

Ledger Value	A150
The sum of original cost and additions & betterments	

Data is Confidential. Value does not carry forward for Single Clone / Multi-

## Range of Values for A150

Minimum	Maximum
0	9999999

#### Validation Rule for A150

- -Original Cost must be equal to the Ledger Value if there are no Additions
- -Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

Total A&B	A003
System generated sum of all reported	amounts in A&B Amount (A317), in US

dollars Data is Confidential. System Generated Field. This element is not eligible for

Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A003

Minimum	Maximum
0	99999999

#### NOTES:

- For railroad-marked cars, report the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not be used to report Ledger Value.
- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.
  - o Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
  - o Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.
- For connected unit cars report the total Truck Location A for all units in the set

## Ind for Pos/Neg Total A&B

A code indicating the positive or negative adjustment to the original cost of the

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A128

Negative Positive

#### A&B Pos/Neg Ind A316

A code indicating the positive or negative adjustment to the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

### Permissible Values for A316

Negative Р Positive

#### Validation Rule for A316

- -When entering an individual Addition & Betterment, you must enter a value in
- -The A&B Indicator is required when Additions & Betterments are reported.
- -The A&B Indicator must not be reported if Additions & Betterments are not reported.

**A&B Amount** A317 The amount of the individual addition and betterment added to or subtracted from the original cost of the equipment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A317

Minimum	Maximum
1	999999

#### Validation Rule for A317

-When entering an individual addition & betterment; A&B Date Done (A319), A&B Type (A318), A&B Pos/Neg Ind (A316), and A&B Amount (A317) must be

**A&B Date Done** A319

#### The date of the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A319

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for A319

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -Addition and Betterment Date Done cannot be earlier than Built Date
- -Additions & Betterments Date Done cannot be later than today's date.

**A&B Type** A318

#### The type of individual addition and betterment as defined by Rule 107

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A318

**GNRL** General - Capitalized Additions and Betterments INIT Initial load of historical A&B amount as of Umler 4.6 implementation

#### Validation Rule for A318

- -For each equipment, only one Individual A&B Type can have a value of INIT.
- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.

## Car Management

**Pool Number** 

Unique number used to indicate the grouping of equipment for a particular

Used for Transportation Codes. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add Back.

**User Routing Instructions** 

The routing instruction reported by the user

Used for Transportation Codes.

#### **Permissible Values for TCUR**

- 2 Trailer Service Rule 2
- G Contaminated commodity service
- Μ Mark canceled
- 0 Owner requested return
- П Unassigned equipment

#### NOTES:

• For further explanation reference Appendix E.

**Umler Transportation Code** 

**TCOD** 

**TCUR** 

The type of assigned service, empty routing or restriction of the equipment

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

NOTES:

=Mandatory ▲=Used in ETC Generation

• For further explanation reference Appendix E.

Transportation Cond Code TCCD

The AAR or FRA interchange restriction code

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

Mechanical Restriction TCME

User reported or system generated type of mechanical restriction

Used for Transportation Codes.

### Permissible Values for TCME

- S Scrap
- X AAR Interchange Restriction
- Y FRA Interchange Prohibited

#### NOTES:

• For further explanation reference Appendix D.1

Mech Restriction Reason TCMR

The explanation of the Mechanical Restriction (TCME)

Used for Transportation Codes.

#### **Permissible Values for TCMR**

- A Restricted Due to Age (Over 40-AAR, Over 50-FRA)
- B Restricted Due to Air Brakes
- C Restricted Due to Axles
- D Restricted Due to Couplers and Couplers Parts
- F Restricted Due to Couplers Yokes
- G Restricted Due to Draft Gears
- J Restricted Due to Journal Bearing and Journal Lubrication
- N Restricted Due to Trucks
- P Restricted Due to Truck Side Frames
- T Restricted Due to Trucks Bolsters
- U Restricted by AAR or Owner
- W Restricted Due to Wheels
- X Restricted Due to Scrap or Early Warning
- Z Restricted Due to Umler Conflict (Not Valid for User Input)

#### NOTES:

- For further explanation reference Appendix D.2.
- The assignment of the Transportation Codes S\_ SX, XA, XZ and YA generate
  the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and
  mileage rate.

Sys Gen Routing Inst TCGR
The routing instruction generated by the system

This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil / Add Back.

#### NOTES:

For further explanation reference Appendix E.5.

Loading Authority Fleet Status B597

Identifies when a car is listed on a fleet in the Loading Authority application

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B597

- Y Yes
- S Suspended

#### NOTES:

- When equipment is on a fleet the Loading Authority (LA) application will update the flag to 'Y – Yes'. When equipment is removed from a fleet the LA application will remove the 'Y – Yes'.
- When equipment is on a LA fleet that is suspended the LA application will
  update the flag to 'S Suspended'. When the equipment is on a LA fleet that
  is no longer suspended the LA application will update the flag to 'Y Yes'.

**Train Service** 

Restricted Speed Empty B180

Describes the maximum restricted speed the equipment can travel when empty

Range of Values for B180

Minimum	Maximum
5	95

**Restricted Speed Loaded** 

R181

B189

Describes the maximum restricted speed the equipment can travel when loaded

Range of Values for B181

Minimum	Maximum
5	95

Shove Car to Rest

Identifies the car must be moved to rest by locomotive

Permissible Values for B189

Y Y6

Train Position Sensitive B211
Indicates there is a physical reason, limiting its position on a train

Permissible Values for B211

Y Yes

End of Train Only B277

Indicates the equipment must be placed at the end of the train (including per AAR RP-2001)

Permissible Values for B277

Y Ye

Check Trailing Tonnage B044

Indicates the equipment has restrictions on trailing tonnage

Permissible Values for B044

' Yes

**Curve Negotiate Exception** 

B178

Describes the requirement for negotiating a curve

Permissible Values for B178

A Restrictive Curve Negotiability, Section 2.1.4 of M-1001

B Does not meet all Chapter XI Curving Requirements

Coupler Restriction B278
Special Train Service Code WI

Permissible Values for B278

Y Yes

1 103

**Cooper Rating Exception** 

B273

Describes the cooper rating (weight distribution model of the equipment), for use in movement across bridges

Permissible Values for B273

- A Excessive Cooper Rating
- B Cooper Rating in Excess of E66

Clearance Exception

B275

Describes equipment containing nonstandard dimension

Permissible Values for B275

- A Excessive Outside Extreme Height (A185)
- B Excessive Outside Extreme Width (A186)
- C Lower Guides for Loading High Cube Containers

=Mandatory

- D All other unique clearance issues
- Ε Hopper with Excessive Outside Width when pickup shoes are extended

#### **Loaded Net Braking Ratio**

B551

Indicates calculated minimum loaded net braking ratio per AAR Specifications in place on built or rebuilt date (in percent).

System Generated Field. This element is not eligible for input.

#### Permissible Values for B551

- -11.0
- -8.5

## NOTES:

- Loaded Net Braking Ratio is determined as follows:
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Loaded Net Braking Ratio will be set to blank.
  - If Built Date (BLDT) is greater than or equal to 1/1/1972 and less than 1/1/2004, than loaded Net Braking Ratio is 8.5%.
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is greater than or equal to 1/1/2004, then Loaded Net Braking Ratio is 11.0%.

#### Owner-Provided Loaded Net Braking Ratio

Indicates an alternate minimum loaded net braking ratio provided by owner (in percent).

#### Range of Values for B552

Minimum	Maximum
8.5	14.0

#### NOTES:

- · Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net Braking Ratio (B551).
- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - o Rebuilt Date (RBDT)
  - o Gross Rail Load/Weight (A266)
  - o Equipment Type Code (UMET)
  - o Empty/Load Device Eqpd (B075)

#### **Empty Braking Ratio**

Indicates calculated empty braking ratio per AAR Specifications in place on built or rebuilt date (in percent).

System Generated Field. This element is not eligible for input.

#### Range of Values for B553

Minimum	Maximum
15.0	38.0

### NOTES:

- Empty Braking Ratio is determined as follows;:
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Empty Braking Ratio will be set to blank.

#### **Owner-Provided Empty Braking Ratio**

B554

Indicates an owner supplied alternate empty braking ratio (in percent).

#### Range of Values for B554

Minimum	Maximum
15.0	38.0

#### NOTES:

- · Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net Braking Ratio (B551).
- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - o Rebuilt Date (RBDT)
  - o Gross Rail Load/Weight (A266)

- o Equipment Type Code (UMET)
- o Empty/Load Device Eqpd (B075)

## Truck Components

Axle Spacing Distance Mandatory

B020

The distance between axle centers on the same truck

Affects Rating.

#### Permissible Values for B020

- 53 53 Inches
- 54 Inches 54
- 55 55 Inches
- 60 60 Inches
- 61 61 Inches
- 62 62 Inches
- 63 63 Inches
- 64 64 Inches
- 65 65 Inches
- 66 66 Inches
- 68 68 Inches
- 70 70 Inches
- 71 71 Inches 72 72 Inches
- 73 73 Inches
- 74 74 Inches
- 76 76 Inches
- 78 78 Inches
- 99 Axle Space Unknown

**Truck Axle Count B252** 

The number of axles per truck

#### Range of Values for B252

Minimum	Maximum
1	4

#### Validation Rule for B252

- Sum of Truck Axle Count must equal Axle Count (A024)

#### Journal Size Mandatory

A147

## The size of the journal bearing

Affects Rating.

## Permissible Values for A147

Α	3-3/4 X 7	В	4-1/4 X 8	C	5 X 9
D	5-1/2 X 10	Ε	6X11	F	6-1/2 X 12
G	7 X 12	Н	7 X 14	K	6-1/2X9
M	7 X 9				

#### Validation Rule for A147

- -4-axle equipment with Journal Size B and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 103,000 lbs.
- -Journal Size B (4 1/4 x 8) requires a Gross Weight of 154,000 lbs. for 6axle cars unless the car is Star Coded
- -4-axle equipment with Journal Size C and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 142,000 lbs.
- -Journal Size C (5 x 9) requires a Gross Weight of 213,000 lbs. for 6-axle cars unless the car is Star Coded
- -4-axle equipment with Journal Size D and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 177,000 lbs.
- -Journal Size D (5 1/2 x 10) requires a Gross Weight of 265,000 lbs. for 6axle cars unless the car is Star Coded
- -4-axle equipment with Journal Size E and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 220,000 lbs.
- -Journal Size E (6 x 11) requires a Gross Weight of 179,000 lbs. for 4-axles ETC P---, Q---, V--- cars only (cars with 28 inch wheels) unless the car is Star Coded
- -Journal Size E (6 x 11) requires a Gross Weight of 330,000 lbs. for 6-axles

- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 263,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1 or 2, must have Gross Rail Load (A266) of 286,000 lbs.
- -Journal Size F requires a Gross Weight of 394,500 lbs. or 429,000 lbs. for 6-axle cars unless the car is Star Coded.
- -4-axle equipment with Journal Size G or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 315,000 lbs.
- -4-axle equipment with Journal Size G, K, or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1, must have Gross Rail Load (A266) of 286,000 lbs.
- -Journal Size G (7 x 12) requires a Gross Weight of 472,000 lbs. for 6-axle cars unless the car is Star Coded
- -Journal Size H (7 x 14) requires a Gross Weight of 315,000 lbs. for 4-axle cars unless the car is Star Coded
- -Journal Size H (7 x 14) requires a Gross Weight of 472,000 lbs. for 6-axle cars unless the car is Star Coded
- -Journal Size I (6 x 11 and 6 1/2 x 12) or J (6 x 11 and 7 x 12) are only applicable to articulated or draw-bar cars
- -Journal Size Code M (7 x 9) requires a Gross Weight of 472,000 lbs. for 6-
- -Unstarred 4 Axle Cars with GRL of 315,000 and no IGRL reported and Unstarred cars with Journal Size of G or M must have a Wheel Size of 38 inches
- -Gross Weight must be 394,000 lbs. for 6 -axle cars with Journal Size K NOTES:
- A, B and C Journal Classes are prohibited in Interchange per Rule 90.B.4

#### Wheel Diameter Mandatory A294 The diameter of the wheels Permissible Values for A294 28 Inches 30 30 Inches 33 Inches 28 33 38 36 36 Inches 38 Inches Validation Rule for A294

- -UnStarred Cars with Gross Weight of 286,000 lbs. and Increased Gross Rail Load of 2 must have a Wheel Diameter of 36 inches
- -UnStarred Cars with Gross Weight of 286,000 lbs. and Increased Gross Rail Load of 2 must have a Wheel Diameter of either 36 or 38 inches
- -Cars with an Increased Gross Rail Load of 1 and Journal of G or M must have a Wheel Diameter of 38 inches
- -If Connected Unit Count (A020) is not reported, different Wheel Diameters cannot be reported

Stability Device Equipped	B199
Indicates a stability device is present on the truck	<u>-</u>
Affects Rating. Permissible Values for B199	

## Yes

**Bolster Component ID** 

## **Bolster Component ID from Component Registry**

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Sideframe Component ID	B352
Side Frame Component ID from Component Registry	

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Wheelset Component ID	B350
Component ID from Component Registry	

Data is Confidential. This element is not eligible for Input. Value does not carry

forward for Single Clone / Multi-Clone.

## **Draft System Components**

**Coupler Code** A057

#### Permissible Values for A057

BE60AHT

Defines the equipment coupler type

Typo E (Pulo 16) - SE67RE

#### Validation Rule for A057

- -If Rotary Coupler Style is reported, then Coupler Code must be a rotary coupler.
- -If Coupler Code is a rotary coupler, then Coupler Style must be R (Rotary). -Coupler Code of Type E Obsolete (Rule 16) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type E/F Obsolete (Rule 17) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type F Obsolete (Rule 18) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of FROTARY or EFROTARY cannot be reported for cars Built or Rebuilt on or after August 12, 2014.

#### NOTES:

- Obsolete: All Type D couplers are obsolete and should report code DOBS; cars with this coupler code will be restricted in interchange as discussed
- Unknown: If the coupler code is unknown or if the code stamped on the coupler is illegible, the code BUNK FUNK, EFUNK, or LOCOUNK should be
- Special: Codes ESPEC, FSPEC, and EFSPEC have been created to decline coupler bodies that have been manufactured specifically for the equipment owner and are not listed in the attached table.
- The codes FROTARY and EFROTARY cannot be reported for equipment Built or Rebuilt since August 12, 2014.

P Plain	R	Rotary		
Validation Rul	e for B058			

- -If Draft System Type (B073) is H (Hydraulic) then Coupler Style cannot be reported as M (Solid Drawbar) or L (Rotary Drawbar)
- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- -If Draft System Type (B073) of Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported

**Inches of Travel** B061 The number of inches a draft system will travel

Affects Rating.

Range of Values for B061

\*=Conditionally Mandatory

Minimum	Maximum
1	36

#### Validation Rule for B061

- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- If Draft System Type (B073) of Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported

## **Draft System Type Mandatory**

**B073** 

Describes the draft gear/underframe cushion type

#### Affects Rating.

#### Permissible Values for B073

- **Cushioning Center of Car**
- Cushioning End of Car Ε
- S Standard
- Х Devices with less than 6 inches buff travel approved under AAR Standard
- Devices with 6 to 10 inches of buff travel approved under AAR Standard S-060

#### Validation Rule for B073

- If Draft System Type (B073) is Standard Draft Gear (S), Inches of Travel (B061) cannot be reported
- If Draft System Type (B073) is reported as C, E, X, or Y then Inches of Travel (B061) must also be reported
- If Draft System Type (B073) of X, or Y is reported then Draft Gear Group/Cushion Unit Pocket (B562) cannot be reported
- If Draft System Type (B073) X is reported, the Inches of Travel (B061) value must be greater than or equal to 1 and less than 6
- If Draft System Type (B073) Y is reported, the Inches of Travel (B061) value must be greater than or equal to 6 and less than or equal to 10
- -If Draft System Type (B073) is S then Draft Gear Group/Cushion Unit Pocket (B562) may only be A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z (AAR Rule 21)
- If Draft System Type (B073) is E then Draft Gear Group/Cushion Unit Pocket (B562) may only be EOC-1, EOC-1D, EOC-1B, EOC-2, EOC-2D, EOC-2B, EOC-3, EOC-3B, EOC-4, EOC-4B, EOC-5, EOC-5D, EOC-5B, EOC-6, EOC-6D, EOC-6B, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-8F, EOC-9, EOC-9B, EOC-9D, EOC-9E, EOC-10, EOC-10D, EOC-10B, EOC-10F, EOC-11, EOC-11D, EOC-11B, EOC-12, EOC-12D, EOC-12B, EOC-13, EOC-13B, EOC-14, EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16, EOC-16D, EOC-16B, EOC-17, EOC-17D, EOC-17B, EOC-18, EOC-18D, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-23, EOC-23B, EOC-24, EOC-24B, EOC-25E, EOC-26B, EOC-26F, or EOC-27D, or EOC-27E (AAR Rule 59)

## **Cushion Unit Type**

**B**563

Cushion Unit Type value as listed in AAR Field Manual Interchange Rule 21 and

Carry forward for Single Clone / Multi-Clone / Restencil / Add-Back / Equipment Group Change.

#### Permissible Values for B563

- 1 Type 1
- 2 Type 2
- 3 Type 3
- 4 Type 4
- 5 Type 5
- S Type S

#### Validation Rule(s) for B563

- Cushion Unit Type (B563) is mandatory for equipment built on or after June 13, 2019.

- -If Draft Gear Group/Cushion Unit Pocket (B562) is not equal to A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z, then Cushion Unit Type (B563) must be populated.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-6, EOC-7, EOC-7B, EOC-8B, EOC-8B, EOC-9, EOC-9B, EOC-9D, EOC-10, EOC-10B, EOC-10D, EOC-14B, EOC-14B, EOC-18D, EOC-23B, EOC-24B, EOC-25E, or EOC-26B then the Cushion Unit Type (B563) must be 1.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-9E, EOC-26F, or EOC-27E, then the Cushion Unit Type (B563) must be 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-11, EOC-12, EOC-13, EOC-13B, EOC-15, EOC-15B, EOC-15D, EOC-17, EOC-17B, EOC-17D, EOC-18, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-24B, COC-3, COC-5, or COC-7 then the Cushion Unit Type (B563) must be 1 or 2.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-8F or EOC-10F then the Cushion Unit Type (B563) must be 2 or 3.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-5, EOC-5B, EOC-5D, EOC-6, EOC-6B, EOC-6D EOC-11B, EOC-11D, EOC-12B, EOC-12D, or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-16D, or COC-1 then the Cushion Unit Type (B563) must be 1, 2, or 4.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D, EOC-3, EOC-3B, EOC-4, EOC-4B, or COC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, or 4.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1, EOC-1B, EOC-1D, or EOC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or S.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-8 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or 5.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 1 or 2, then the Inches of Travel (B061) must be 20.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 4, then the Inches of Travel (B061) must be 18.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 2, then the Inches of Travel (B061) must be 20
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 1, then the Inches of Travel (B061) must be 30.

Unit Tare Weight	A299
The unit segment weight on rail when empty, sometimes referred to	as Light

Weight, reported in pounds

Range of Values for A299

# Minimum Maximum 10000 500000

#### Validation Rule for A299

-Unit Tare Weight must not be reported if the Connected Unit Count (A020) is not reported

- -Unit Tare Weight must be reported if Connected Unit Count (A020) is reported
- -Unit Tare Weight for Boxcars must be less than or equal 160,000 lbs.
- -Unit Tare Weight for Refrigerators must be less than or equal 140,000 lbs.
- -Unit Tare Weight for Gondolas must be greater than or equal 30,000 lbs.
- -Unit Tare Weight for Gondolas must be less than or equal 110,000 lbs.
- -Unit Tare Weight for Hoppers must be greater than or equal 23,000 lbs.
- -Unit Tare Weight for Hoppers must be less than 120,000 lbs.
- -Unit Tare Weight for Tanks must be greater than 31,000 lbs.
- -Unit Tare Weight for Tanks must be less than 200,000 lbs.
- -Unit Tare Weight for Vflats must be greater than 55,000 lbs.
- -Unit Tare Weight for VFlats must be less than 136,000 lbs.
- -Unit Tare Weight for IFLTs must be greater than 10,000 lbs.
- -Unit Tare Weight for IFLTs must be less than 72,000 lbs.
- -Unit Tare Weight for all flats other than VFlats with ETC Q\_\_\_ must be greater than 23,000 lbs.
- -Unit Tare Weight for all flats other than VFlats with ETC Q\_\_\_ must be less than 500,000 lbs.
- -Unit Segment Tare Weights must add up to the Total Tare Weight (A259)
- -Unit Tare Weight (A299) value must be reported to the nearest 100 pounds

Unit Load Limit	A300

The maximum permissible weight of the commodity that can be loaded into the unit segment, reported in pounds

Range of Values for A300		
Minimum	Maximum	
10000	500000	

#### Validation Rule for A300

- -Unit Load Limit must not be reported if the Connected Unit Count (A020) is not reported
- -Unit Load Limit must be reported if Connected Unit Count (A020) is reported
- -Unit Segment Load Limits must add up to the Load Limit (LDLT)

## **Brake System Components**

Emergency Brake Valve CID	B354
Component ID from Component Registry	

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

# Emergency Valve COTS Date B567 Brake valve emergency portion recondition date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

 Emergency Valve COTS Date is system-generated from a Emergency Brake Valve Inspection.

## valve inspection.

Brake valve emergency portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not

ystem generated element. This element is not eligible for Input. Value do carry forward for Single Clone / Multi-Clone.

## NOTES:

 Emergency Valve OEM Date is system-generated from a Emergency Brake Valve Inspection.

Emergency Valve Part Number	B569
Brake valve emergency portion part number	

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

### Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Service Valve COTS Date **B**564

#### Brake valve service portion recondition date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

Service Valve COTS Date is system-generated from a Service Brake Valve Inspection.

Service Valve OEM Warranty Date

B566

Brake valve service portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

Service Valve OEM Date is system-generated from a Service Brake Valve

Service Valve Part Number

Brake valve service portion part number

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

Service Valve Part Number is system-generated from a Service Brake Valve Inspection.

Slack Adjuster CID B359

#### **Component ID from Component Registry**

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

## Miscellaneous

**Umler Effective Date** 

The date the rating activity (pre-registration, modification, etc.) is expected to occur

This element is not eligible for Query. Does not Carry Forward.

#### Validation Rule for FFDT

-Effective Date cannot be set to more than 13 months in the future.

· Effective Date will default to the 1st of the following month that equipment is registered

Inspection

**ABT Due Date (Repair Track) DU13** 

The due date of the air brake test per AAR Field Manual Rule 3

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

ABT 5-8 Year Due Date **DU58** 

The 5-8 year due date for the air brake test (ABT) after the ABT Due Date (Repair Track)

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**FRA Drop Dead Date** 

FRA Drop Dead Date

System Generated Field. This element is not eligible for Input.

Inspection Certified by

Person certifying inspection

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

Inspection Conducted by COND

Person conducting inspection

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

Inspection Date Done **DTDN** 

The date the inspection was completed; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Validation Rule for DTDN

-The inspection date must not be 60 days before the Build Date

**Inspection Due Date** 

The due date of the next inspection; used for all inspection types reported on equipment

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**Inspection Performer PERF** 

The SCAC that completed the inspection; used for all inspection types reported

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

**Inspection Reporter** REPT

The SCAC that reported the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

SCDD **Scheduled Due Date** 

Scheduled Due Date

This element is not eligible for Input. Does not Carry Forward.

Location/SPLC SPLC The SPLC of the inspecting location; used for all inspection types reported on

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

Air Card Item L015

Detail indicating type of items inspected as part of a locomotive Air Card Inspection

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

**Air Card Description** L016

Description of the items inspected as part of a Locomotive Air Card Inspection

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

**Air Card Frequency Days** L017 Locomotive Air Card Frequency Days

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

Range of Values for L017

Minimum	Maximum
0	99999

=Mandatory ▲=Used in ETC Generation

B523 **Air Brake Test Device** 

Indicates the type of test device used to perform the Air Brake Test

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Permissible Values for B523

- Automatic (Non 4-Pressure) Α
- Μ Manual
- Automatic (4-Pressure)

#### Validation Rule for B523

-Air Brake Test Device (B523) must be reported for Air Brake Test inspection reported on or after December 10, 2020

#### Insp Service Valve COTS Date

B570

#### Brake valve service portion recondition date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

- Reports of 9999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYY

Insp Service Valve OEM Warranty Date

**B571** 

Brake valve service portion Original Equipment Manufacturer warranty date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### NOTES:

- Reports of 999999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYYYY

**Insp Service Valve Part Number** 

B572

Brake valve service portion part number

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

Insp Emergency Valve COTS Date

B573

Brake valve emergency portion recondition date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### NOTES:

- Reports of 9999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYY

Insp Emergency Valve OEM Warranty Date

B574

Brake valve emergency portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

- Reports of 999999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYYYY

Insp Emergency Valve Part Number

B575

Brake valve emergency portion part number

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Insp Service Valve Location Mandatory

B576

Brake valve service portion location

Value does not carry forward for Single Clone / Multi-Clone.

Insp Emergency Valve Location Mandatory

**B577** 

Brake valve emergency portion location reported on an emergency brake valve inspection

Value does not carry forward for Single Clone / Multi-Clone.

# **Umler**

#### **Data Specification Manual**

## General **USCD** Status Code Mandatory Identifies the current operational state

Does not Carry Forward.

#### Permissible Values for USCD

ACTIVE INACTIVE

Ρ PRE-REGISTERED

#### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-Registered.
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID	0001
The equipment stanciled number	

#### Validation Rule for 0001

-Equipment Number must not be larger than 6 digits (i.e., 999999) NOTES:

- Equipment ID includes the mark and number stenciled on the equipment. Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD999999).
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

Mechanical Designation Mandatory	UMMD
Equipment description without physical dimensions	• 🛦
Used in ETC Generation. Used for Transportation Codes.	

Permissible Values for UMMD

MWTK MoW - Tank Tank

#### **Equipment Type Code** UMFT An alpha numeric code that describes the physical attributes of equipment

System Generated Field. This element is not eligible for Input.

#### NOTES:

• Please Refer to Appendix I for More information Regarding ETC Generation

Maint of Way Service Type	B403
Identifies equipment Maintenance Of Way function	

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B403

- Crane / Boom Support Car C2
- F4 Flat-Wheel Sets
- T4 Training Car
- **T8** Track Geometry Car

#### Validation Rule for B403

- Maint of Way Service Type can only be listed on records where the Equipment Group (0002) or Pseudo Equipment Group (B547) is listed as MISC

Built Date Mandatory	BLDT
The date the construction of the equipment is complete	•

Data is Confidential. Used for Transportation Codes. Affects Rating. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for BLDT

Mange of Values for DED I		
Minimum	Maximum	
1/1/1000	12/31/0000	

#### **Validation Rule for BLDT**

-Built Date must be within the last 99 years

- -Built Date must not be in the future for equipment in Active Status
- -Prior and target equipment's Built Date (BLDT) must match for restenciling
- -Built Date cannot be updated within 30 days of the End of Service Date (B078)

#### NOTES:

- Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

Tank Built Date	A298
Tank Built Date	

Data is Confidential.

#### Range of Values for A298

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for A298

-When Stub Sill Design Type is reported as Full then Private Tank Year must be reported

#### Orig Cert of Constr Nbr Mandatory

Δ183

The construction certification number of the AAR provides to the equipment manufacturer (Form AAR 4-2)

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for A183

-Tank Original Certificate of Construction is required for Tanks that have a Built/Rebuilt (Birth) Date on or after July 1, 1997

Rebuilt / ILS Date	RBDT
The date the re-construction of the equipment is complete	

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Range of Values for RBDT

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for RBDT

- -Rebuilt/Increased Life Service Date must be after the Built Date (BLDT)
- -Rebuilt Date must not be more than 70 years after the Built Date (BLDT)
- -Rebuilt Date is required for Extended Service Code (A096) 1, 2, or 3 for Increased Life Service
- -Rebuilt Date is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years of service
- -If Rebuilt Date is reported then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life Service

#### NOTES:

- Railroad cars -- applicable only to cars meeting status as provided in both STB Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt Date unless car has been approved by the AAR.

**Rebuilt Flag** 

Identifies the equipment is nearing its end of life cycle

Data is Confidential. System Generated Field. This element is not eligible for Input.

**Permissible Values for RBFL** 

Ν No Yes

**Owner Mandatory** 

**UMOW** 

Primary reporting mark of the railroad or private company owning the car

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil /

Multi-Restencil.

#### NOTES:

- · Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.
- Owners are required to submit a form R-1 to the operating and Maintenance Department AAR when reporting marks are changed.

**LESE** Lessee

The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### Validation Rule for LESE

- -Umler Owner (UMOW) and Lessee are not allowed to be equal
- -Lessee cannot be a child reporting mark

#### NOTES:

• In order to assign privately marked cars to a pool, a railroad reporting mark must be reported.

**Equipment Group Mandatory** 0002 Identifies the various major car types

Used for Transportation Codes. Affects Rating.

**Maintenance Party** MNPT

The parent reporting mark of the company responsible for the maintenance and repairs of the equipment

Does not Carry Forward.

**B201 Mark Owner Category** The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

## Permissible Values for B201

- US Private В
- C Canadian Private
- F Foreign Private
- Н Canadian Class II
- Canadian Class I
- Mexican Class I 1
- Κ Canadian Class III
- Μ Mexican Private
- Ν **US Private Steamship**
- 0 Canadian Private Steamship
- Ρ Mexican Private Steamship
- Q Foreign Private Steamship
- US Class II Railroad R
- U US Class I Railroad
- US Class III Railroad V
- Mexican Class II Railroad W
- Υ Mexican Class III Railroad

#### NOTES:

• This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry.

**Prior Equipment ID** PRID

The previous reporting mark and number of the equipment Value does not carry forward for Single Clone / Multi-Clone.

## Validation Rule for PRID

- -Prior and target equipment's Built Date (BLDT) must match
- -The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

#### NOTES:

• Prior ID enables equipment records to share the same historical lineage. Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

B122 **Last Update Date** 

Date of the last Umler element change

System Generated Field. This element is not eligible for Input.

**Equipment Add Date** B082 Date the reporting mark and number was added to the Umler system

System Generated Field. This element is not eligible for Input.

**Status Change Reason USCR** 

Identifies the reason for the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

#### **Permissible Values for USCR**

- **Initial Load**
- Μ Movement
- Status Changed Manually 0
- R Restencil

#### NOTES:

- If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

**Status Change Date** USCT Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

**Extended Service Mandatory** 

A code indicating the eligibility of an increase to the life cycle

Used for Transportation Codes. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A096

- 1st ILS Inspection, additional 5 years of Service
- 2 2nd ILS Inspection, additional 5 years of service (10 years total)
- 3rd ILS Inspection, additional 5 years of service (15 years total) 3
- Built New between January 1, 1964 June 30, 1974, Certified for 50 C Years of Service, Built New Before July 1, 1974 & Received AAR Waiver
- F Built new from July 1,1974, Qualified for 50 Years Service
- Ν Built Before January 1, 1964, Qualified for 40 Years Service
- R Rule 88, Rebuilt cars
- Built between January 1, 1964 June 30, 1974, Qualified for 40 Years & U eligible for certification for 50 Years Service
- Car is certified (FRA Waiver & AAR) for 65 years of service from date built new from January 1, 1964

#### Validation Rule for A096

- -If Rebuilt Date (RBDT) is reported, then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life
- -Extended Service Code of C cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974
- -Extended Service Code of E cannot be reported if the car was built before July 1, 1974
- -Extended Service Code of N cannot be reported if the car was built on/after January 1, 1964
- -Extended Service Code of U cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974

#### NOTES:

**– 107 –** 

- Value is used to calculate End of Service Date (B078).
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) R for

=Mandatory ▲=Used in ETC Generation = Affects Rating

\*=Conditionally Mandatory

A096

# **Umler**<sup>®</sup>

#### **Data Specification Manual**

Rebuilt, or V for 65 years service.

 Rebuilt Date (RBDT) is required for Extended Service Code (A096) 1, 2, 3, and V for Increased Life Service.

End of Service Date

B078

## Indicates the date of the end of equipment life

Data is Confidential. System Generated Field. This element is not eligible for Input.

#### NOTES:

Data becomes non-confidential two year priors to End of Service Date.

Do Not Load After B590

Equipment should not be loaded after date shown in the element

#### Data is Confidential.

#### Validation Rules for B590

- -Do Not Load After (B590) cannot be updated thirty days prior to the date shown in the element.
- -Do Not Load After (B590) cannot be updated within thirty days of the End of Service Date (B078).
- -Do Not Load After (B590) date cannot be on or after the End of Service (B078) date.

#### NOTES:

- The element will be initially populated by End of Service (B078) minus 30 days
- Data becomes non-confidential thirty days prior to the Do Not Load After (B590) date.

**Equipment Identification** 

EINN

#### Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

#### NOTES:

 Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections.

**Info Conflict Status** 

B355

#### Indicates that an Informational Conflict exists on the Equipment record

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

**Conflict Status** 

B050

## Identifies the escalation level of equipment in active conflict

System Generated Field. Affects Rating. This element is not eligible for Input. Value does not carry forward for Add Back.

### Permissible Values for B050

- 1 Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Date of Original Conflict** 

B063

## The date the equipment was originally placed in the current conflict $% \left( 1\right) =\left( 1\right) \left( 1\right$

System Generated Field. This element is not eligible for Input.

**Next Conflict Status** 

B135

### Identifies the next escalation level of an equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B135

- Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- · Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Notice Indicator** 

B137

#### Identifies equipment in error in Umler Notice Management

System Generated Field. This element is not eligible for Input.

**Conflict Status Next Date** 

B062

### The date the conflict status will be escalated

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

Rate Indicator

A070

#### Indicates the rate type applicable to the unit

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for A070

- 0 Zero-Rated Due to Conflict Errors
- 2 Private Mileage Rate
- 6 Zero-Rated Scrap (S\_,SX), AAR Overage (XA), FRA Overage (YA), Umler Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].
- M Railroad Market Rate
- Q Zero-Rated Railroad Market Rate Due to Conflict Errors

#### NOTES:

 If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.

**Private Zero Rate** 

B150

Indicates a private car is subject to contractual agreement, nullifying mileage rates

Affects Rating.

#### Permissible Values for B150

Y Yes

### NOTES:

• Reporting "Y" generates Rate Indicator (A070) value 6 and a zero rate.

First Movement Date

USAT

## The first movement date under the stenciled mark of the equipment

This element is not eligible for Input. Does not Carry Forward.

**Equipment Add Company** 

B083

## The reporting mark of the company that added the equipment

System Generated Field. This element is not eligible for Input.

**Registration Reason** 

B174

The code indicating the reason this equipment is added

Does not Carry Forward.

#### Permissible Values for B174

A Add-Back N New P Pending Restencil R Restencil

Restencil Program Ind

B177

Identifies the equipment is under a restencil program

Permissible Values for B177

Y Yes

●=Mandatory ▲=Used in ETC Generation

= Affects Rating

**– 108 –** 

\*=Conditionally Mandatory

June 2025

Delete Reason	Code	B064

A code that designates the reason the equipment has been deleted

Value does not carry forward for Add Back.

#### Permissible Values for B064

- Restenciled Α
- D Destroyed or wrecked
- Lease terminated, removed from fleet L
- Retired unserviceable beyond economic repair
- R Rebuilt
- Sold Serviceable S
- W Over age retired for dismantling
- Υ Error, reporting did not exist
- Z Other

#### **Non-Compliant Wheelsets**

Equipment record is incomplete and has a missing wheelset component ID association. Refer to AAR Field Manual Rule 44 for industry requirements

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for B544

- -A Wheelset Component ID is required for each applicable location on equipment built on or after January 1, 2016
- -A Wheelset Component ID is required for each applicable location on equipment rebuilt on or after January 1, 2016 and Gross Rail Load (A266) is greater than 268,000 lbs

#### NOTES:

- A "Y" will be system generated if the equipment is active and the number of Wheelset CID's required is not equal to the Axle Count (A024) on the
- Validation rule applies to equipment that has been in Active status for 60 days

## **Pseudo Equipment Group**

Equipment needs to be identified as a miscellaneous record while maintaining all elements linked to the original equipment group

System Generated Field.

#### Permissible Values for B547

MISC Miscellaneous

# Weight

#### Gross Rail Load/Weight Mandatory

A266

The maximum permissible weight on rail of the equipment and the load, reported in pounds

Affects Rating.

#### Range of Values for A266

Minimum	Maximum
43000	1000000

#### Validation Rule for A266

- -UnStarred 4 Axle Cars with a Journal Size of G must have a Gross Weight equal to 315,000 lbs.
- -Gross Rail Load must be equal to the Load Limit (LDLT) plus the Tare Weight (A259)

#### NOTES:

Use Table 1 below to determine Gross Rail Load, if Qualification for Increased Gross Rail Load (B344) does not exist.

TABLE 1 -

Journal Size	Load per Axle	Gross Rail Load for 4-
		axle Equipment
B - 4 1/2" x 8"	25,750 lbs.	103,000 lbs.
C - 5" x 9"	35,500 lbs.	142,000 lbs.
D - 5 1/2" x 10"	44,250 lbs.	177,000 lbs.
E - 6" x 11"	55,000 lbs.	220,000 lbs.

F - 6 1/2" x 12"	65,750 lbs.	263,000 lbs.
G - 7" x 12"	78,750 lbs.	315,000 lbs.
K - 6 1/2" x 9"	71,500 lbs.	263,000 lbs.
M - 7" x 9"	78.750 lbs.	315,000 lbs.

Use Table 2 below to determine Gross Rail Load for 4-axle equipment if Qualification for Increased Gross Rail Load (B344) exists.

#### TABLE 2 -

Qualification for Increased Gross Rail Load (B344)	Journal Size	Gross Rail Load
1	K - 6 1/2" x 9"	286,000 lbs.
1	G - 7" x 12"	286,000 lbs.
1	M - 7" x 9"	286,000 lbs.
2	F - 6 1/2" x 12"	286,000 lbs.
2	K - 6 1/2" x 9"	286,000 lbs.
3	F - 6 1/2" x 12"	268,000 lbs.
3	K - 6 1/2" x 9"	268,000 lbs.

- For multi-unit equipment, report the total gross rail load for the entire set.
- Refer to Field Manual Rule 70 if additional information is required.

A Gross Rail Load less than the listed or calculated values may be entered; however:

- Star Code (A247) must be R or S, and
- Load Limit (LDLT) must also be reduced, ensuring Tare Weight (A259) plus Load Limit (LDLT) equals the reported Gross Rail Load.

For equipment having two or more different journal sizes, see following examples:

Example for Drawbar Connected:

- A 3-unit drawbar connected car has 12 axles.
- The end units (Locations A and B) each have 4 axles with E 6" x 11" journals.
- The intermediate unit (Locations C) has 4 axles with F 6 1/2" x 12" iournals

Using TABLE 1, the Gross Rail Load would be:

8 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = + 4 ea. F-6 1/2" x 12" journal axles X 65,750 lbs. per axle = 263,000 lbs. Gross Rail Load = 703.000 lbs.

Example for Articulated Connected:

- A 5-unit articulated intermodal car has 6 trucks (12 axles).
- The end trucks (Locations A and B) each have 2 axles with E 6" x 11"
- The intermediate trucks (Locations C, D, E, and F) each have 2 axles with G - 7" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

4 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 220,000 lbs. + 8 ea. G-7" x 12" journal axles X 78,750 lbs. per axle = 630,000 lbs. Gross Rail Load = 850,000 lbs.

## Tare Weight Mandatory

The equipment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

#### Range of Values for A259

Minimum	Maximum
31000	200000

#### Validation Rule for A259

-Tare Weight for all non-articulated TANK must be less than 200000 lbs.

- Tare Weight (A259) value must be reported to the nearest 100 pounds if Weighing Date (A288).

#### NOTES:

- Do not report an average Tare Weight for car series, except for Pre-Registered cars
- · When cars are made active, the actual Tare Weight must be recorded

#### Load Limit Mandatory

LDLT

The maximum permissible weight of the commodity that can be loaded into the equipment, reported in pounds

#### Affects Rating.

#### Range of Values for LDLT

Minimum	Maximum
35000	650000

#### NOTES:

- For connected unit cars report the sum of the load limits for all units in the set.
- Tank cars in Chlorine service cannot exceed 180,000 value. Reference Star Code (A247) Validation Rules and notes for Chlorine cars in this situation.

#### Weighing Status Mandatory

A289

Indicates the weight information is an estimate or an actual measurement

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A289

- A Actual
- E Estimated
- V Verified correct Tare Weight
- X Tare Weight subject to verification (System Generated)

#### Validation Rule for A289

- -Equipment cannot be within a series of 10 with identical Tare Weights (A259), refer to Appendix P for further information on resolving tare weight conflicts
- -When Status Code changes to Active or Inactive Weighing Status must be reported as Actual (A) or Verified (V) within 60 days of Status Code change

Weighing Date	A288

The date the equipment was actually weighed

Value does not carry forward for Single Clone / Multi-Clone.

## Range of Values for A288

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for A288

- -If Weighing Date is reported the Tare Weight (A259) must be reported
- -When Weighing Date is reported then Weighing Status (A289) must be A (Actual) or V (Verified)
- -If Weighing Status (A289) is A (Actual) or V (Verified correct Tare Weight) then Weighing Date must be reported
- -Weighing Date must be on or before the current date
- -Weighing Date cannot be before Built / Rebuilt date

Gallonage Capacity	A297
The number of gallons the equipment will hold	<b>A</b>
Hard's FTC Consortion	

Used in ETC Generation.

Star Code	A247
Indicates a reduction of the Load Limit (LDLT) of the equipment per AA	AR Rule 70

Affects Rating

#### Permissible Values for A247

- R Body Capacity less than Truck Capacity
- S Reduced Load Limit

#### Validation Rule for A247

- -4-axle Cars with Star Codes of S or R must not exceed Gross Weight of 263,000 lbs. when Journal Size is A, B, C, D, or E
- -Journal Sizes having Star Code of S must have a Gross Weight that is less than the calculated Gross Weight with rounding applied
- -UnStarred 4 Axle Cars reporting Increased Gross Rail Load (IGRL) of 2 or 3 must have a Gross Weight greater than or equal to 264,000 lbs.
- -Starred 4 axle cars with IGRL of 1 must have a Wheel Size of 36 inches when Gross Weight is less than 286,000 lbs.
- -Starred 4 Axle Cars with Increased Gross Rail Load (IGRL) reported must have a Journal Size of K, G, or M

#### NOTES:

- Tank cars in Chlorine service cannot have a Load Limit (LDLT) greater than 180,000. If the Gross Rail Load (A266) minus the Tare Weight (A259) results in a Load Limit (LDLT) greater than 180,000 the following must be true:
  - Load Limit (LDLT) = 180,000
  - ° Star Code (A247) = S
  - ° Gross Rail Load (A266) = Tare Weight (A259) plus 180,000

Oual for Inc GRL B344

AAR qualification for increased Rail Load Code designating AAR approval for operating 4-axle equipment at a gross rail load greater than 263,000 lbs per AAR Rule 88

#### Permissible Values for B344

- 1 Rule 88 IGRL Code 1 (> 263,000 lbs. and <= 286,000 lbs. GRL per AAR Specification S-286)
- 2 Rule 88 IGRL Code 2 (> 263,000 lbs. and <= 286,000 lbs. GRL)
- 3 Rule 88 IGRL Code 3 (> 263,000 lbs. and <= 268,000 lbs. GRL)

#### Validation Rule for B344

- -4-axle Cars reporting Increased Gross Rail Load (IGRL) of 3, or reporting IGRL of 1 or 2 and having an S Star Code must have a Gross Weight that does not exceed 286,000 lbs.
- -4-axle Cars with Increased Gross Rail Load (IGRL) of 2 or 3 must have a Journal Size of F or K
- -4-axle Rule 88 Cars require a Wheel Size of 36 or 38 inches for Gross Weight greater than 263,000 and less than or equal to 286,000 lbs.
- -4-axle Cars with Increased Gross Rail Load (IGRL) of 1 or 2 having no Star Code and a Journal Size of other than F or K, must have a Gross Weight greater than or equal to 263,000 lbs. and less than or equal to 286,000 lbs.
- -4-axle equipment with Increased Gross Rail Load (IGRL) of 1 and having no Star Code (A247) must have a Journal Size (A147) of G, K, or M
- -4-axle equipment having Qualification for Increased Gross Rail Load of 2 or 3 must have a Journal Size (A147) of F or K
- -Unstarred 4 Axle Cars with Increased Gross Rail Load of 2 or IGRL of 1 and Journal Size K must have a Wheel Size of 36 inches
- -Unstarred 4 Axle Cars with GRL of 315,000 and no IGRL reported and Unstarred cars with Journal Size of G or M must have a Wheel Size of 38 inches
- -Unstarred 4 axle cars must report Qualifications for Increased GRL if the GRL is between 263,000 and 315,000

# **Dimension**

Plate Code Mandatory

A046

Indicates the extreme height and width clearance of the equipment

Affects Rating.

## Permissible Values for A046

- B Plate Code B
- C Plate Code C
- E Plate Code E
- F Plate Code F
- G Clearance Code G
- N Plate Code N

#### NOTES:

- For a description of Plate Codes, please see Appendix J at the back of this manual.
  - o Report B: If clearance does not exceed Plate B

- o Report C: If clearance is greater than Plate B. but does not exceed Plate C
- o Report E: If clearance is greater than Plates B and C, but does not exceed Plate E.
- o Report F: If clearance is greater than Plates B, C and E, but does not exceed Plate F
- o Report G: If clearance exceeds Plates B, C, E, F, and N.
- o Report N: If clearance is greater than Plates B, C, E, and F, but does not exceed Plate N.
- There is no AAR Plate G. Clearance Code G is included in Umler to represent equipment that does not fit any existing AAR clearance plates.
- For ARTICULATED/MULTI-UNIT SET report the most restrictive clearance plate of UNIT in the set.

#### **Outside Length Mandatory OSLG** The outside length over pulling faces of couplers in normal position

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

# Range of Values for OSLG

Minimum	Maximum	
26 ft 6 inches	124 ft 0 inches	

#### **Validation Rule for OSLG**

- -Tanks cannot have an Outside Length greater than 80 feet 11 inches.
- -Outside Length (OSLG) on freight cars must exceed the Inside Length (A135) by 2 feet or more
- -Outside Length (OSLG) on freight cars (except refrigerators) must not exceed Inside Length (A135) by more than 16 feet
- -Outside Length (OSLG) on refrigerator cars (Mechanical Designation RB, RBL, RP, RPL, or RC) must not exceed Inside Length (A135) by more than 26 feet

#### NOTES:

- For connected unit cars report the maximum coupled length of the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

Outside Extreme Width Mandatory	A186
The outside extreme width of the equipment	• .

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

## Range of Values for A186

Minimum	Maximum
7 ft 0 inches	11 ft 1 inches

#### **Validation Rule for A186**

- -Outside Extreme Width must not exceed 10 feet 8 inches for Plate Codes B. C. E. F. or N
- -Outside Extreme Width (A186) for Plate Code A must not be less than 10 feet 8 inches
- -Outside Extreme Width (A186) for Plate Code A must not exceed 10 feet 10 inches.

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

Outside Extreme Height Mandatory	A185
Height from top of rail to extreme projecting height	•-

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A185

Minimum	Maximum
8 ft 0 inches	17 ft 11 inches

# Validation Rule for A185

- -Outside Extreme Height for Plate Codes B must be less than or equal to 15 feet 1 inch
- -Outside Extreme Height for Plate Codes C or I must be less than or equal to 15 feet 6 inches
- -Outside Extreme Height for Plate Code E must be less than or equal to 15 feet 9 inches
- -Outside Extreme Height for Plate Code F must be less than or equal to 17 feet 0 inch
- -Outside Extreme Height for Plate Code N must be less than or equal to 17 feet 1 inch

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

#### Outside Height Extr Width Mandatory

A187

Tank Cars

The highest point at which the extreme width of the equipment occurs Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A187

Minimum	Maximum
1 ft 0 inches	17 ft 11 inches

#### Validation Rule for A187

- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 8 inches if Outside Height Extreme Width is 13 feet 10 inches or less
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 7 inches if Outside Height Extreme Width is 13 feet 11 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 0 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 4 inches if Outside Height Extreme Width is 14 feet 1 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 2 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 3 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 4 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 9 inches if Outside Height Extreme Width is 14 feet 5 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 5 inches if Outside Height Extreme Width is 14 feet 6 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 2 inches if Outside Height Extreme Width is 14 feet 7 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 10 inches if Outside Height Extreme Width is 14 feet 8 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 6 inches if Outside Height Extreme Width is 14 feet 9 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 3 inches if Outside Height Extreme Width is 14 feet 10 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 11 inches if Outside Height Extreme Width is 14 feet 11 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 6 inches if Outside Height Extreme Width is 15 feet 0 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 4 inches if Outside Height Extreme Width is 15 feet 1 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 8 inches if Outside Height Extreme Width is 14 feet 3 inches or less
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 7 inches if Outside Height Extreme Width is 14 feet 4 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 5 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 4 inches if Outside Height Extreme Width is 14 feet 6 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 7 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 8 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 9 inches

### **Data Specification Manual**

- -Outside Extreme Width (A186) for Plate Codes C must not exceed 8 feet 3 inches if Outside Height Extreme Width is 15 feet 3 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 11 inches if Outside Height Extreme Width is 15 feet 4 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 8 inches if Outside Height Extreme Width is 15 feet 5 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 4 inches if Outside Height Extreme Width is 15 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 8 inches if Outside Height Extreme Width is 15 feet 2 inches or less
- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 6 inches if Outside Height Extreme Width is 15 feet 3 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 3 inches if Outside Height Extreme Width is 15 feet 4 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 9 feet 6 inches if Outside Height Extreme Width is 15 feet 5 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 8 feet 8 inches if Outside Height Extreme Width is 15 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 7 feet 11 inches if Outside Height Extreme Width is 15 feet 7 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 7 feet 1 inches if Outside Height Extreme Width is 15 feet 8 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 6 feet 3 inches if Outside Height Extreme Width is 15 feet 9 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 8 inches if Outside Height Extreme Width is 16 feet 3 inches or less
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 7 inches if Outside Height Extreme Width is between 16 feet 4 inches and 16 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 6 inches if Outside Height Extreme Width is 16 feet 7 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 3 inches if Outside Height Extreme Width is 16 feet 8 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 0 inches if Outside Height Extreme Width is 16 feet 9 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 8 inches if Outside Height Extreme Width is 16 feet 10 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 5 inches if Outside Height Extreme Width is 16 feet 11inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 2 inches if Outside Height Extreme Width is 17 feet 0 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 8 inches if Outside Height Extreme Width (A187) is 16 feet 9 inches or
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 6 inches if Outside Height Extreme Width (A187) is 16 feet 10 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 4 inches if Outside Height Extreme Width (A187) is 16 feet 11 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 2 inches if Outside Height Extreme Width (A187) is 17 feet 0 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 9 feet 11 inches if Outside Height Extreme Width (A187) is 17 feet 1 inch

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

#### **Truck Center Length** A276 The length between the centers of the two truck systems

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A276

Minimum	Maximum
15 ft 0 inches	76 ft 11 inches

## Validation Rule for A276

- -Truck Center Length is required for cars with an Outside Length of greater than 62 feet 6 inches
- -Truck Center Length must be a minimum of 15 feet for cars with an Outside Length greater than 62 feet 6 inches

**Truck Count** 

• For connected unit cars report the dimension of the largest unit in the set.

# Specification **B256** The total number of trucks on the equipment

System Generated Field. This element is not eligible for Input.

Range of Values for B256	
Minimum	Maximum
2	4

Axle Count Mandatory	A024
The total number of axles on the equipment	•

#### Affects Rating.

Range of Values for A024	
Minimum	Maximum
2	6

#### **Validation Rule for A024**

- -Axle Count must be greater than or equal to 4
- -Axle Count for an articulated car must be greater than or equal to ((Connected Unit Count (A020) x 2) + 2)
- -Axle Count for a draw bar connected car must be greater than or equal to (Connected Unit Count (A020) x 4)
- -Total Axle Count must match sum of truck axle counts

Wheel Bearing Type Mandatory	B191
Indicates the wheel bearing journal design for the equipment	•
Affects Rating.	

#### Permissible Values for B191

Plain R

### Validation Rule for B191

- -Cars with Plain Bearings will have a Transportation Code (TCOD) and Transportation Condition Code (TCCD) of either YA, S\_, SX, or XJ
- -Equipment cannot have Plain Bearings if Built Date (BLDT) is on or after January 1, 1993

Bearing Shielded From HBD	B021
Indicates the wheel bearings are shielded from wayside hot box detectors	

# Permissible Values for B021

**Brake Shoe Type Mandatory** B026 Indicates the type of brake shoe on the equipment

#### Permissible Values for B026

- C **Tread Conditioning**
- Н **High Friction Composite**
- Low Friction Composite/Cast Iron

### **CC Side Bearing Type**

A146

Indicates the travel range of the constant contact side bearings installed on the equipment

#### Permissible Values for A146

- LC Long Travel Constant Contact
- SC **Short Travel Constant Contact**

## Validation Rule for A146

- -Equipment having Qualification for Increased Gross Rail Load (B344) of 1 must have Constant Contact Side Bearing Type of LC
- -All Tank cars must be equipped with (M-948) approved Long Travel CC Side Bearings

**Empty/Load Device Eqpd** 

B075

Indicates that the air brake system includes a device to determine if the equipment is empty or loaded, and then varies the braking forces accordingly

=Mandatory ▲=Used in ETC Generation

# Umler<sup>®</sup>

# **Data Specification Manual**

#### Permissible Values for B075

Y Yes

Remote Monitoring Device

B176

Indicates the equipment has a device that transmits a signal or records data

#### Permissible Values for B176

Y Yes

N No

#### Validation Rule for B176

-Remote Monitoring Device (B176) is mandatory for all tank cars on or after August 1, 2021

#### NOTES:

 Per AAR S-2045, This may be data related to ride quality, geographic location, temperature/condition of the load, load/empty status, etc.

#### **AEI High Temperature Tag**

B006

Indicates the equipment is equipped with a high temperature AEI tag

#### Permissible Values for B006

Y Yes

#### **Compartment Count Mandatory**

A052

The number of individual compartments the equipment contains

#### Affects Rating

#### Range of Values for A052

Minimum	Maximum
1	6

#### **Validation Rule for A052**

-Tank Compartment Count cannot be reported for Tank Major Class 77

#### Operating Brakes Mandatory

A182

The number of air brake control valves on the equipment (excludes hand brakes). One control valve consists of a service portion, emergency portion, and pipe bracket. Example: DB-60 control valve

#### Permissible Values for A182

1

#### Validation Rule for A182

- -Operating Brakes must be reported for all equipment
- -Operating Brakes (A182) must be 1 for non-articulated equipment with an Axle Count (A024) equal to 4
- -Auto populate element value '1' on equipment characteristic add (ECA) for TANK equipment

#### NOTES

• Excludes empty/load device, number 8 vent valve, and proportion valve.

#### **ECP Brake Type**

B327

Indicates the type of electronic controlled pneumatic brake used on the equipment

## Permissible Values for B327

- N Not Equipped
- O Overlay Both ECP & Air Brake
- S Stand Alone ECP Only

#### Validation Rule for B327

-Equipment must have a value entered for ECP Brake Type if built or rebuilt after June 28, 2012

## **ECP Brake Builder**

B328

The manufacturer of the electronic controlled pneumatic brake used on the equipment

## Permissible Values for B328

NYAB New York Air Brake

WABT WABTEC

#### Validation Rule for B328

- -If ECP Brake Type (B327) is Stand Alone or Overlay then a value must be entered for ECP Brake Builder
- -If ECP Brake Type (B327) is Not Equipped then ECP Brake Builder is not reportable

#### Slack Adjuster Group

B538

The slack adjuster group on the equipment per AAR Field Manual Rule #8

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B538

В	Group B	Ε	Group E	F	Group F	Н	Group H
J	Group J	L	Group L	M	Group M	Ν	Group N
0	Group O	Р	Group P	Q	Group Q	R	Group R
1	Internal	2	Unequipped				

#### Validation Rule for B538

- Slack Adjuster Group is mandatory for all equipment built or rebuilt on or after January 1, 2016
- If Slack Adjuster Group is reported as "1" then Brake Cylinder Mount Type (B540) must be reported as "T"
- If Slack Adjuster Group is "1" or "2", then Slack Adjuster CID (B359) must not be reported.

#### NOTES:

 Permissible value of "1 – Internal" identifies special truck mounted internal slack adjuster within brake cylinder.

### **Brake Cylinder Mount Type**

B540

Identifies the location of the brake cylinder

#### Permissible Values for B540

B Body Mounted

T Truck Mounted

#### Validation Rule for B540

 Brake Cylinder Mount Type is mandatory for all equipment built or rebuilt on or after January 1, 2016

# **Equipment Builder**

A035

Identifies the original manufacturer of the equipment

#### Permissible Values for A035

AB AMF BEAIRD

ACF American Car & Foundry

ACFX ACF Industries

ALCC Alloy Crafts Company
ARI ARI Industries

CIPM Chart Industries, Inc.

CNCF Carros De Ferrocarril, SA

EVAN Evans Products

UTLX Union Tank Car

VERM Vertex

Validation Rule for A035

-Equipment Builder must be populated if the Built Date (BLDT) is July 1, 2010 or newer

#### **Builder Lot Code**

B030

A unique identifier for a group of equipment built by one manufacturer under the same contract

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

#### Validation Rule for B030

-Equipment built or rebuilt on or after June 28, 2012 must have a value for **Builder Lot Code** 

#### **Built Country**

B031

#### The country where the equipment was constructed

Data is Confidential.

#### Permissible Values for B031

CA Canada MX Mexico

US **United States** 

#### Rebuilt Country

B170

#### The country where the equipment was re-constructed

#### Permissible Values for B170

Canada CA Mexico

US United States

#### **FRA Reflectorization**

**B096** 

Indicates the equipment owner assumes responsibility for applying reflectorization tape

#### Permissible Values for B096

Reflectorization Plan Ρ

W Reflectorization Waiver

### Validation Rule for B096

-Reflectorization is mandatory for all equipment after November 28, 2015.

#### Tank Major Class Mandatory

**B207** 

# The high level description of the tank design type

## Used in ETC Generation.

#### Permissible Values for B207

- 01 Aluminum Non Pressure
- 02 High Purity Aluminum Non Pressure
- 04 Nickel
- 05 Acid Car Welded or Riveted
- 06 Stainless Steel Grade 304 or 430

## NOTES:

- See Appendix N for data ordered by Tank Major Class.
- This element is used in determining if the tank car meets DOT117.
- This element is used in determining if the tank car meets HM-246.

## CPC-1232 Compliant

**B522** 

System generated element to identify tank cars that meet the CPC-1232 technical requirements. Specifics on the requirements can be found in Chapter 2 of M-1002, paragraph 2.7.

System Generated Field. This element is not eligible for Input, Output or Query. Does not Carry Forward.

# Permissible Values for B522

Yes

#### NOTES:

- For a tank car to qualify to element B522 (CPC-1232 compliant), all of the following mandatory elements must be populated:
  - A237 Stenciled Shipping Specs begins with "111" or "117R"
  - A264 Top Fittings Protection = "E" Equipped M1002 Appendix E10.2
  - ° B105 Head Protection Shield Thickness >= 0.5
  - ° B203 Tank Head Material Norm = "Y"

# **Umler**<sup>6</sup>

## **Data Specification Manual**

105A200W

- ° B208 Tank Shell Material Norm = "Y"
- ° In addition to the above, the car must have one of these interdependent combinations:

	B204	A118	A257	A258	A254	A255
	Tank	Head	Tank	Tank	Tank	Tank

Stub Sill Variation
---------------------

## Type of reinforcement on the bottom shell of the tank car

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B526

Continuous Ν Non-Continuous

### Validation Rule for B526

-For this tank car, a value for Stub Sill Design Variation is required.

## NOTES:

- If the following conditions are met, Stub Sill Design Variation (B526) must be reported.
- If Shipping Container Spec Stenciled (A237) begins with '111' or '211'
  - and Stub Sill Design Type (A251) = any value except 'FULL'
  - and if Tank Shell Material Norm (B208) = any value except 'Y'
  - $^{\circ}~$  and if Tank Shell Material Spec (A257) = '51570' or '1997UNK'
  - ° and if Heater System Type (X109) = any value except 'E'
- then the user must report a value of 'C (Continuous)' or 'N (Non-continuous)' for Stub Sill Design Variation (B526).

#### Restricted under TC-PD-34

B527

**B526** 

### Tank Car Subject to restrictions under TC-PD-34

System Generated Field. This element is not eligible for Input, Output or Query. Does not Carry Forward.

#### Permissible Values for B527

Yes

#### NOTES:

- If the following conditions are met, Restricted Under TC-PD-34 (B527) will be assigned a value of 'Y (Yes)' by the system.
- If Shipping Container Spec Stenciled (A237) begins with '111' or '211'
  - and Stub Sill Design Type (A251) = any value except 'FULL'
  - ° and Tank Shell Material Norm (B208) = any value except 'Y'
  - ° and Tank Shell Material Spec (A257) = '51570' or '1997UNK'
  - $^{\circ}~$  and if Heater System Type (X109) = any value except 'E'
  - ° and Stub Sill Design Variation (B526) = any value except 'C'
- then the system will assign a value of 'Y (Yes)' for Restricted Under TC-PD-34 (B527).

#### **Design Shipping Cont Spec**

A072

The Department of Transportation (DOT) design specification - as built

#### Permissible Values for A072

```

Validation Rule for A237

-Stencil Shipping Specifications must be reported for Tank Major Class - 94

# Umler

## **Data Specification Manual**

-The original Built date (BLDT) for a DOT117R must occur before 10/1/2015

#### NOTES:

- This element is used in determining if the tank car meets CPC-1232 Compliance (B522). See CPC-1232 Compliant (B522) for explanation.
- This element is used in determining tank major class 17. See Appendix N for
- Selection of DOT117P requires approval from the FRA per 49 CFR 179.202-12(a).
- This element is used in determining if the tank car meets DOT117.
  This element is used in determining if the tank car meets HM-246.

## **Tank Lining Material**

A315

Identifies the type of coating or lining material applied to the interior of the

#### Permissible Values for A315

- В Nickel electroplating, e.g., Bart
- F Fiberglass
- Κ Electroless plating, e.g., Kanigen
- L Lead
- Rubber both natural and synthetic R
- Liquid barrier applied by spray applications of materials such as epoxy and phenolic. Examples of some manufacturers' names are Plasite, PPG and Heresite
- Unlined
- PolyVinyl Chloride

# Validation Rule for A315

-Tank Lining Material is required for Tanks that have a Built/Rebuilt (Birth) Date on or after March 14, 2019

Tank Head Thickness	A255
The material thickness of the tank head in inches	

Range of Values for A255

\*=Conditionally Mandatory

Minimum	Maximum
0.25	1.3

#### **Validation Rule for A255**

- -Tank Head Thickness is required for Tanks that have a Built/Rebuilt (Birth)
  Date on or after July 1, 1997
- -Tank Head Thickness must be reported for tank cars built on or after October 1, 2011 and whose Stenciled Shipping Specification begins with 111 or 211.

#### NOTES:

- This element is used in determining if the tank car meets CPC-1232 Compliance (B522). See CPC-1232 Compliant (B522) for explanation.
- This element is used in determining if the tank car meets DOT117.
- This element is used in determining if the tank car meets HM-246.
- For Stenciled Shipping Specifications beginning with 113 or 115, this element represents the material thickness of the inner tank.

Tank Head Mat Spec Mandatory	A254
The material characteristics including specification and grade for the	he tank head
	•

#### Validation Rule for A254

-Tank Head Material Specification and Grade is required for Tanks having a Built/Rebuilt (Birth) Date on or after July 1, 1997

#### NOTES:

- This element is used in determining if the tank car meets CPC-1232 Compliance (B522). See CPC-1232 Compliant (B522) for explanation.
- This element is used in determining if the tank car meets DOT117.
- This element is used in determining if the tank car meets HM-246.

# Tank Head Material Norm B203 Indicates the tank head steel is normalized (cooled in still air) Permissible Values for B203

# N No Y Yes Validation Rule for B203

-Normalized Head Material cannot be YES if Tank Head Material value is equal to 240304, 240316, 2095052, 2095083, 2095086, 2095154, 2095254, 2095454, 2095652, 240304L, 240316L, or 304L

Unknown

- Tank Head Material Normalized cannot be reported as Unknown (Z) for tank cars built on or after January 1, 2010
- Tank Head Material Normalized must be reported for tank cars built on or after October 1, 2011 and whose Stenciled Shipping Specification begins with 105, 111, 112, 117, or 211

#### NOTES:

15565

- This element is used in determining if the tank car meets CPC-1232 Compliance (B522). See CPC-1232 Compliant (B522) for explanation.
- 240304, 240316, 240304L and 240316L (Stainless Steel) qualify for CPC -1232
- This element is used in determining if the tank car meets DOT117.
- This element is used in determining if the tank car meets HM-246.

#### Validation Rule for A257

-Tank Shell Material Specification and Grade is required for Tanks having a Built/Rebuilt (Birth) Date on or after July 1, 1997

#### NOTES:

- This element is used in determining if the tank car meets CPC-1232 Compliance (B522). See CPC-1232 Compliant (B522) for explanation.
- This element is used in determining if the tank car meets DOT117.
- This element is used in determining if the tank car meets HM-246.

Tank Shell Thickness	A258
The material thickness of the tank shell in inches	
Pango of Values for A2E8	

Range of Values for A258		
Minimum	Maximum	
0.1875	1.3	

#### Validation Rule for A258

- -Tank Shell Thickness is required for Tanks that have a Built/Rebuilt (Birth) Date on or after July 1, 1997
- -Tank Shell Thickness must be reported for tank cars built on or after October 1, 2011 and whose Stenciled Shipping Specification begins with 111 or 211.

### NOTES:

- This element is used in determining if the tank car meets CPC-1232 Compliance (B522). See CPC-1232 Compliant (B522) for explanation.
- This element is used in determining if the tank car meets DOT117.
- This element is used in determining if the tank car meets HM-246.
- For Stenciled Shipping Specifications beginning with 113, 115, 204, or 206 this element represents the material thickness of the inner tank.

Tank Shell Material Norm	B208
Indicates the tank shell steel is normalized (cooled in still air)	*

#### Permissible Values for B208

No Υ Yes Unknown

#### Validation Rule for B208

- -Normalized Tank Shell Material cannot be YES if Tank Head Material value is equal to 240304, 240316, 2095052, 2095083, 2095086, 2095154, 2095254, 2095454, 2095652, 240304L, 240316L, or 304L
- Tank Shell Material Normalized cannot be reported as Unknown (Z) for tank cars built on or after January 1, 2010
- Tank Shell Material Normalized must be reported for tank cars built on or after October 1, 2011 and whose Stenciled Shipping Specification begins with 105, 111, 112, 117, or 211

#### NOTES:

- This element is used in determining if the tank car meets CPC-1232 Compliance (B522). See CPC-1232 Compliant (B522) for explanation.
- 240304, 240316, 240304L and 240316L (Stainless Steel) qualify for CPC -1232
- This element is used in determining if the tank car meets DOT117.
- This element is used in determining if the tank car meets HM-246.

Coil Material	X111
Indicates the construction material of the coils	

Permissible Values for X111

Aluminum C Carbon Steel N Nickel Stainless Steel

**Heater System Type** X109 Indicates the type of heater system that the tank is equipped with

#### Permissible Values for X109

Combination Ext/Int Heater System

Ε **Exterior Coils** Interior Coils

#### Validation Rule for X109

- If Heater System Type is reported, then Coil Material must be reported
- If the Heater System Type is not reported, the Coil Material must not be reported

#### NOTES:

• If Combination Ext/Int Heater System is reported, then the Coil Material is of the exterior coil.

**Head Protection Thickness** B105 The material thickness in inches of the protective head shield.

# Range of Values for B105

Minimum	Maximum
0.119	1.3

#### Validation Rule for B105

- -If Head Protection Type (A118) is F, H or T, then Head Protection Thickness is must be greater than or equal to 0.5 inches
- -If Head Protection Type (A118) is U, then Head Protection Thickness must not be reported

#### NOTES:

- This element is used in determining if the tank car meets CPC-1232 Compliance (B522). See CPC-1232 Compliant (B522) for explanation.
- This element is used in determining if the tank car meets DOT117.
- This element is used in determining if the tank car meets HM-246.

**Head Protection Type** A118 Indicates the construction design of head protection or head shield

## Permissible Values for A118

- Head Protection (other than Head Shield) C
- Full Height Head Shield
- н Half Height Head Shield
- Т Trapezoidal Head Shield
- U Unequipped
- Unknown, built before 7/1/1997

## Validation Rule for A118

- If the 4th character of the Stencil Class is J or S and the car was built on or after July 1, 1997, Head Protection Type must be reported as C, F,
- If the 4th character of the Stencil Class is T and the car was built on or after July 1, 1997, Head Protection Type must be reported as F, H, or T
- -Head Protection Type must be reported for tank cars built on or after October 1, 2011 and whose Stenciled Shipping Specification begins with 111 or 211

## NOTES:

- This element is used in determining if the tank car meets CPC-1232 Compliance (B522). See CPC-1232 Compliant (B522) for explanation.
- This element is used in determining if the tank car meets DOT117.
- This element is used in determining if the tank car meets HM-246.
- Permissible value C is a performance based head puncture resistance system meeting 49 CFR 179.16(a). The common 11 gauge jacket alone does not meet this requirement but may be used as part of a system including the tank car tank proven by testing.
- Permissible value F is a prescribed head puncture-resistance system meeting 49 CFR 179.16(c)(1).
- Permissible value U is for non-insulated cars, or cars with a jacket (typically 11 gauge) that is solely used to cover the insulation and is not C,FH, or T.

# Umler

# **Data Specification Manual**

## Jacket Material Category Mandatory

B204

The equipment material characteristics including specification and grade for the tank jacket

#### Permissible Values for B204

- **CARBON STEEL**
- Stainless Steel
- UNEQUIPPED U

#### NOTES:

- This element is used in determining if the tank car meets CPC-1232 Compliance (B522). See CPC-1232 Compliant (B522) for explanation.
- This element is used in determining if the tank car meets DOT117.
- This element is used in determining if the tank car meets HM-246.

#### Insulatn/Thrmal Prot Type

Δ142

Describes the type of material(s) used for insulation/thermal protection of the tank car.

#### Permissible Values for A142

- CF Ceramic Fiber
- CK Cork
- Cork and Closed Cell Rubber Foam CR
- FC Fiberglass & Ceramic Fiber
- FG Standard Fiberglass
- FS Fiberglass and Spray On Foam
- High Temp Fiberglass FT
- MW Mineral Wool
- PC Polyurethane Foam and Ceramic Fiber
- PE Perlite
- PF Polyurethane Foam
- ы High Temperature Polyurethane Foam
- RF
- SP Spray On Exterior Thermal Protection
- LIF Unequipped

#### Validation Rule for A142

- -If Insulation/Thermal Protection Thickness (B259) is blank, then Insulation/Thermal Protection Type must be blank or Unequipped
- -If Insulation/Thermal Protection Thickness (B259) is reported, then Insulation/Thermal Protection Type must be populated with a permissible value other than UE (Unequipped)
- -When Insulation/Thermal Protection Type is CK Cork, then Compartment Count (A052) must be 1
- -Insulation/Thermal Protection Type is mandatory if Stenciled Shipping Spec (A237) is 105Axxx, 105Sxxx, 111A100W3, 111A100W4, 113xxx, 115xxx, 204W, 206W (permissible value cannot be UE-Unequipped)
- -Insulation/Thermal Protection Type is mandatory if the 4th character of the Stenciled Shipping Spec (A237) is equal to H, J, P, or R (permissible values cannot be UE - Unequipped or blank)
- -Insulation/Thermal Protection Type must be reported as SP Spray On Foam if 4th character of the Stenciled Shipping Spec (A237) is T

Ins	ulation	Thickness			B259

The thickness of the insulation/thermal protection

Range of Values for B259		
Minimum	Maximum	
0.5	12	

## Validation Rule for B259

-If Insulation/Thermal Protection Type is Unequipped, Insulation/Thermal Thickness must not be reported

#### NOTES:

This element is used in determining if the tank car meets DOT117.

Bottom Outlet/Fitting Typ Mandatory	A308
Describes the design of the bottom outlet of the tank	•
Permissible Values for A308	

- **Bottom Washout & Sump**
- **Bottom Outlet**
- С **Bottom Outlet & Sump**
- F Designed for but not equipped
- S
- U Unequipped
- W **Bottom Washout**
- Unknown, built prior to 7/1/1997

## Validation Rule for A308

- -Tank Bottom Outlet Fitting Type is required for Tanks having a Built/Rebuilt (Birth) Date on or after July 1, 1997
- If the Tank Bottom Outlet Fitting Type is not reported, then the Bottom Outlet Count (B142) must be reported as Zero
- If the Tank Bottom Outlet/Fitting Type = U (Unequipped), then the Tank Bottom Fitting Protection (A153) must equal U (Unequipped)
- -Bottom Outlet Type must be reported as S (Sump) or U (Unequipped) if the Stencil Class (A237) is 105xxx, 111A60W5, 111A60W7, 111A100W5, 111A100W4, 111A100W7, 112xxx, or 211A60W7
- Bottom Outlet Fitting Type may be reported but cannot contain the value B or C if the Stenciled Shipping Specification (A237) is equal to 111A100ALW2, 111A100W2, 111A60ALW2, 111A60W2, 211A60W2, or 211A100W2
- Tanks with Stenciled Shipping Specification (A237) that begin with 120 can only have Bottom Outlet Fitting Type (A308) of B, W, S, or U
- Tanks with Stenciled Shipping Specification (A237) that begin with 109 can only have Bottom Outlet Fitting Type (A308) of W, S, or U

Bottom Outlet Count	B142
The number of hottom outlets or washouts on the equipment	

Range of Values for B142			
Minimum	Maximum		
0 9			
Validation Rule for B142			

- Tanks with Stenciled Shipping Specification (A237) that begin with 120 or 109 can only have 1 Bottom Outlet
- Tank Bottom Outlet Count is required for Tanks with a Bottom Outlet Fitting Type (A308) that is not equal to F, S or U and a Built/Rebuilt (Birth) Date on or after July 1, 1997

## **Bottom Outlet Valve Type**

**R542** 

Describes the type of Bottom Outlet Valve (BOV) design applied to the tank

#### Permissible Values for B542

- External Bottom Outlet Ball Valve
- В Internal Bottom Outlet Ball Valve
- C **Bottom Operated Plug Valve**
- D Top Operated Valve
- **Bottom Operated Butterfly Valve**

#### Validation Rule for B542

- Bottom Outlet Valve Type is required when Bottom Outlet Fitting Type (A308) equals B or C and the Tanks with a Built/Rebuilt date is on or after July 1, 2015

# **Btm Outlet Vlv Actuation**

**B543** 

Identifies how the bottom outlet valve is to be actuated/operated

## Permissible Values for B543

- Handle that is stowed separately
- В Handle that is located completely within the skid
- С Handle that is disengaged from the valve when in the closed position and located outside the skid
- Alternate means of actuation approved by the AAR Tank Car Committee

#### Validation Rule for B543

-Bottom Outlet Valve Actuation is required when Bottom Outlet Valve Type (B542) equals A and the tank car Built/Rebuilt date is on or after July 1, 2015

- If Stenciled Shipping Specification (A237) begins with 117J, 117P or 117R, reporting of Bottom Outlet Valve Actuation (B543) becomes conditionally mandatory when:

> Bottom Outlet/Fitting Type (A308) equals B or C; and Bottom Outlet Valve Type (B542) equals A, B, C, or E

#### NOTES:

- This element is used in determining tank major class 17. See Appendix N for explanation.
- This element is used in determining if the tank car meets DOT117.

**Bottom Fitting Protection** A153 Describes the design protection level around the bottom outlet value

#### Permissible Values for A153

- Level A > 1"" Protrusion Α
- Level B Varies By Type
- С Level C > 5"" Protrusion
- F Level E (meets CPC-1406)
- U Unequipped
- 7 Unknown, built prior to 7/1/1997

#### Validation Rule for A153

- -If Tank Bottom Outlet Count is not reported, then the Tank Bottom Fittings Protection must not be reported
- -Tank Bottom Fittings Protection is required for Tanks with a Built/Rebuilt (Birth) Date on or after July 1, 1997

#### NOTES:

- Tank cars ordered built new on or after January 1, 2024 must have Bottom Fitting Protection (A153) of E or U reported.
- Level A protection means that:
  - at time of retrofit, the bottom service equipment or sump extended more than one inch below the bottom of the tank envelope. This applies to tank cars built prior to May 1982 and that were retrofitted with bottom fittings protection prior to July 2006.
  - at time of construction no portion of the bottom service equipment/sump extended more than one inch below the tank envelope, or the bottom service equipment/sump was within the envelope of the safety system or continuous center-sill. This applies to tank cars built new after May 1982 with bottom fittings protection per M-1002 Appendix E.
- Level B protection means that:
  - at time of retrofit, the bottom service equipment or sump met conditions for bottom fittings protection. Refer to M-1002 Appendix E 9.1.5.2 (Version 2014). This applies to tank cars built prior to May 1982 and that were retrofitted with Bottom Fittings Protection prior to July 2006.
- · Level C protection means that:
  - at time of retrofit, the bottom service equipment or sump extended more than five inches below the bottom of the tank envelope. This applies to tank cars built prior to May 1982 and that were retrofitted with bottom fittings protection prior to July 2006.
- Level E is intended for bottom safety systems conforming to specification M-1002 Appendix E 8.0 (Version 2023).

Top Fittings Protection Mandatory

Identifies the existence of top fittings protection associated with preventing loss of commodity due to rollover.

## Permissible Values for A264

- Equipped per M-1002 Chapter 2, paragraph 2.2.3.3 (Acid Cars) Α
- Ε Equipped per M-1002, Appendix E, paragraph 9.2.1 (nonpressure cars)
- F Equipped per 49 CFR 179.202-13(h) (DOT117R tank cars)
- Ν
- Equipped per 49 CFR 179.100-12(c) (pressure style housing)
- R Equipped per 49 CFR §179.102-3(a)(1) (9 MPH Rollover)

- Alternative Protection Shear Off Valves Applied per 49 CFR §179.102(a)(2)
- Т Equipped with Top Skids
- Equipped with other than M-1002, Appendix E, paragraph 9.2.1
- Unknown, built prior to 7/1/1997

#### Validation Rule for A264

- -Top Fittings Protection is required for tank cars with a Built/Rebuilt (Birth) Date on or after July 1, 1997
- -Tank cars built on or after July 1, 1997 cannot have a Top Fittings Protection value of Z (unknown)
- -Top Fittings Protection cannot be reported as A, E, F, N, or Z for Tank Major Classes of 37 - 62, 64 - 65, 67, 80 - 81, 86 - 97 if the Built/Rebuilt Date is on or after July 1, 1997
- -If Stenciled Shipping Specification (A237) beginss with 117R, the Top Fittings Protection must be E or F.
- -If Stenciled Shipping Specification (A237) beginss with 117J or 117P, the Top Fittings Protection must be E.
- -Tank cars built on or after December 1, 2015 cannot have a Top Fittings Protection value of Y.

#### NOTES:

- This element is used in determining if the tank car meets CPC-1232 Compliance (B522). See CPC-1232 Compliant (B522) for explanation.
- This element is used in determining tank major class 17. See Appendix N for explanation.
- This element is used in determining if the tank car meets DOT117.
- This element is used in determining if the tank car meets HM-246.
- Permissible value N is intended for tank cars unequipped with top fittings protection or as described by 49 CFR 179.200-16(g). which are only for weather protection.
- Permissible value R is intended for pressure tank cars built on or after March 16, 2009 used for the transportation of PIH materials and marked in accordance with 49 CFR 179.22(e). (Example: DOT105J600I).
- Refer specifically to 49 CFR Part 179, AAR Specification M-1002, and the approved Certificate of Construction to identify the type of top fitting protection appropriate to the tank class.

**Safety Relief Device Cnt** A181 The number of safety relief devices applied to the tank.

# Range of Values for A181 Minimum Maximum

Validation Rule for A181

-Safety Relief Device Count is required for Tanks with a Built/Rebuilt (Birth) Date on or after July 1, 1997

A230 Safety Relief Device Type Mandatory Describes the design of the safety relief device.

## Permissible Values for A230

- C Combination (Valve & Vent)
- D Vent
- Ρ Fusible Plug
- Special Relief Device (for handling Carbon Dioxide AND Hydrogen S Peroxide)
- U Unequipped
- V Valve
- Unknown, built prior to 7/1/1997

#### Validation Rule for A230

- -Safety Relief Device Type is required for Tanks with a Built/Rebuilt (Birth) Date on or after July 1, 1997
- -Safety Relief Device Type must be reported, if Safety Relief Device Count
- -Safety Relief Device Count (A181) must be greater than 0 unless the Safety Relief Device Type is reported as Unequipped (U) or Unknown (Z)

NOTES:

=Mandatory ▲=Used in ETC Generation

- This element is used in determining if the tank car meets DOT117.
- This element is used in determining if the tank car meets HM-246.

#### Safety Vent w/Surge Prot Mandatory

A231

Indicates the equipment has a safety vent that is equipped with a surge protector

#### Permissible Values for A231

N No

Y Yes

Z Unknown, built prior to 7/1/1997

#### Validation Rule for A231

-Tank Safety Vent with Surge Protector is required for Tanks with a Built/Rebuilt (Birth) Date on or after July 1, 1997

PWHT Not Reworked	B280
Special Train Service Code WK	

#### Permissible Values for B280

Y Yes

PWHT Re-stress Relieved	B279
Special Train Service Code WJ	

#### Permissible Values for B279

Y Yes

Year Tank Qualified Mandatory	B240
The year the tank car tank was last qualified.	

#### Data is Confidential.

#### Validation Rule for B240

- -The Year the Tank was Qualified cannot be prior to the Year the Tank was Built or Rebuilt
- -The Year the Tank was Qualified cannot be prior to 1998
- -Year Tank Qualified must be reported when the Year Tank Qualification  $\mbox{\it Due}$  is reported
- -Year Tank Qualified must not be reported if Year Tank Qualification Due is not reported

#### NOTES:

 Year tank qualified must match the Qualification Stencil on the tank car. See figure below:

	STATIONSTENCIN	OLIMIEIED	DUE
TANK QUALIFICATION	ABC-1	1999 (B240)	2009 (B241)

INTHTR JSPGR	FGL-1	1999	2004
LINING	ABC-1	pp	NONE
88.B.2 INSPECTION	ABC-1	1999	2009
STUB SILL INSPECTION	ABC-1	1999	2009

Qualification stencil-sample of completed form

Service Equip Qualified	B242
The year the service equipment is inspected	

Data is Confidential.

# Validation Rule for B242

- -The Year Service Equipment Qualified cannot be prior to the Year the equipment was Built or Rebuilt
- -The Year Service Equipment Qualified cannot be prior to 1998
- -Year Service Equipment Qualified must be reported when the Year Service Equipment Qualification Due is reported
- -Year Service Equipment Qualified must not be reported if Year Service Equipment Qualification Due is not reported

#### NOTES:

 Service equip qualified year must match the qualification stencil on the tank car.

Service Equipment Due	B243
The year the service equipment is due for next qualification.	

Data is Confidential.

#### Validation Rule for B243

 -Year Service Equipment Qualification Due cannot be prior to the Year the Service Equipment Qualified

#### NOTES:

 Service equip qualified year must match the qualification stencil on the tank car

Pressure Relief VIv Qualified	B244
The year the proceure relief valve was last qualified	

Data is Confidential.

## Validation Rule for B244

- -The year the Pressure Relief Valve was Qualified cannot be prior to the year the car was built
- -The year the Pressure Relief Valve was Qualified must be on or after the year 1998
- -Pressure Relief Valve Qualification Year is required when Year Pressure Relief Valve Qualification Due is reported
- -Pressure Relief Valve Qualification Year must not be reported if Year Pressure Relief Valve Qualification Due is not reported

# NOTES:

 Pressure relief valve qualified must match the qualification stencil on the tank car.

Pressure Relief Valve Due B245
The year the pressure relief valve is due for next qualification.

Data is Confidential.

## Validation Rule for B245

-Pressure Relief Valve Qualification Year due cannot be before Pressure Relief Year Due

#### NOTES

**– 122 –** 

• Pressure relief valve due must match the qualification stencil on the tank car.

	Thickness Qualified Year	B246
	The year the service equipment is inspected was last qualified.	
п	D : : 0 (: 1 :: 1	

Data is Confidential.

=Conditionally Mandatory

#### Validation Rule for B246

- -Tank Thickness Qualified Year cannot be prior to year car was built
- -Tank Thickness Qualified Year must be on or after the year 1998
- -Year Tank Thickness Valve Qualified is required when Year Tank Qualification Due reported
- -Year Tank Thickness Valve Qualified can only be reported if Year Tank Qualification Due is reported

#### NOTES:

• Thickness qualified year must match the qualification stencil on the tank car.

Thickness Qualified Due	B247
The year the tank car tank thickness is due for next qualification.	

# Data is Confidential. Validation Rule for B247

-Year Tank Thickness Qualification due cannot be before Thickness Qualified Due

#### NOTES:

- Thickness qualified due must match the qualification stencil on the tank car.
- Report the year '9999' for next thickness qualification at the time of lining removal/replacement (LNG RMVL).

Air Hose Arrangement	B524
The type of trainline air hose arrangement	

#### Permissible Values for B524

- A S-424 Angle Cock Location
- B S-425 Angle Cock Location on Cars Equipped with AAR Type F Coupler
- C S-426 Angle Cock Location on Cars with Floating Sills
- S-427 Angle Cock and Air Brake Hose Location on Cars with Excessive
   Overhang Preventing Compliance with AAR Standards
- E S-428 Angle Cock Location on Cars Equipped with AAR Type F Coupler and Cushioned Underframe
- F S-4003 (Former Standard)
- G S-4003x (Former Standard Retrofitted to Meet All Dimensions Except Height)
- H S-4003-05 (Current Standard Train Line Arrangement for Cars with F-Shank Couplers)
- S-4021 Angle Cock and Brake Hose Location on Cars with EOCC (E and F)
- J S-4021 Coupler Mounted Bracket End Arrangement
- K S-4028 Train Line Arrangement with Displaceable Union on Cars with EOCC and Couplers Not Exceeding 45 in. in Length
- L S-4029 Train Line Arrangement with Displaceable Union on Cars with EOCC and Couplers Exceeding 45 in. in Length
- M S-4030 Trolley Arrangement on Cars with EOCC and E-Shank Couplers

#### Validation Rule for B524

-Air Hose Arrangement must be reported for this equipment if it is Built or Rebuilt on or after April 22, 2014.

#### NOTES:

- If any of the following conditions apply, Air Hose Arrangement (B524) must be reported for cars Built or Rebuilt on or after April 22, 2014:
  - Draft Gear Type (B073) at any location is C or E.
  - ° Connected Unit Count (A020) is reported.
  - $^{\circ}~$  Outside Length (OSLG) is greater than or equal to 70 feet (840 inches).
  - o The overhang is greater than 5 feet 6 inches (66 inches). Overhang is calculated as follows:
  - 0.5 \* (Outside Length, in inches, minus Truck Center Length, in inches, minus 31 inches)
    - For all other equipment, reporting Air Hose Arrangement is optional.

4-Pressure ABT Receiver Eqpd	B539
Identifies if the equipment is equipped with a 4-pressure air bra	ake test receiver

Value does not carry forward for Single Clone / Multi-Clone.

## Permissible Values for B539

- E Equipped
- N Not Equipped

#### NOTES:

 An "E" will be system generated if a 4-Pressure ABT is reported on the equipment.

Jacket Thickness	B541
The nominal thickness for the jacket in inches	

#### Range of Values for B541

Minimum	Maximum
0.1196	1.3

#### Validation Rule for B541

-Jacket Thickness is required for tank cars built or rebuilt on or after July 1, 2015 when Tank Jacket Material (B204) equals N or S

#### NOTES:

- DOT117 jacket thickness requirement (49 CFR §179.202-7)
- This element is used in determining if the tank car meets DOT117.
- This element is used in determining if the tank car meets HM-246.
- For Stenciled Shipping Specifications beginning with 113, 115, 204, or 206 this element represents the material thickness of the outer jacket (shell).

Thermal Protection System	B555
Identifies the existence of a Thermal Protection System that meets 49	CFR
179 18 (a) (b) or (c)	

System Generated Field. This element is not eligible for input.

#### **Permissible Values for B555**

E Equipped

#### **Validation Rule for B555**

-Thermal Protection System is mandatory if the 4th character of the Stencil Shipping Specification (A237) is equal to J, T, P, or R

#### NOTES:

- When the fourth character of the Stencil Shipping Specification (A237) is equal to J, T, P, or R the system will generate a value of 'E'.
- This element is used to identify when a tank car is equipped with a thermal protection system that meets the requirements of 49 CFR 179.18.
- The applicability of the element is mandatory when specified by one of the following subparts of 49 CFR.
  - § 173.31(b)(4) (Thermal protection requirements for pressure tank cars)
  - § 173.314(k) (Special requirements for chlorine)
  - § 179.202-6 (DOT117J)
  - § 179.202-12 (DOT117P)
  - § 179.202-13 (DOT117R)
- This element is used in determining tank major class 17. See Appendix N for explanation.
- This element is used in determining if the tank car meets DOT117.

Cost	
Original Cost	A184
The original manufacturer selling price	

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

Range of Values for A184	
Minimum	Maximum
0	9999999

#### Validation Rule for A184

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported.
- -Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost
- -Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

NOTES:

- Original Cost is never altered. It is the cost of the equipment to the original owner.
- For railroad-marked cars, report in US dollars the original ledger value of the original owner For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24
- The original cost is used in the settlement of AAR Interchange Rule 107 Office Manual.
- For connected unit cars report the total original cost for all units in the set.
- Numeric, applicable to all railroad-marked cars Also, applicable to privately marked covered hopper (LO) cars.
- Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

Ledger Value	A150
The sum of original cost and additions & betterments	
Data is Confidential Value does not carry forward for Single Clone /	Multi-

Clone.

#### Range of Values for A150 Minimum Maximum 9999999

#### Validation Rule for A150

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

Total A&B	A003
System generated sum of all reported amounts in A&B Amound dollars	nt (A317), in US

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A003

Minimum	Maximum
0	99999999

#### NOTES:

- For railroad-marked cars, report the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not be used to report Ledger Value.
- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.
  - o Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
  - Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.
- For connected unit cars report the total Truck Location A for all units in the set

Ind for Pos/Neg Total A&B	A128
A code indicating the positive or negative adjustment t equipment	to the original cost of the
Data is Confidential. System Generated Field. This election input. Value does not carry forward for Single Clopermissible Values for A128	•
N Negative P Positive  A&B Pos/Neg Ind	A316

A code indicating the positive or negative adjustment to the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A316

Negative P Positive

Validation Rule for A316

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -The A&B Indicator is required when Additions & Betterments are reported.
- -The A&B Indicator must not be reported if Additions & Betterments are not

#### **A&B Amount** A317

The amount of the individual addition and betterment added to or subtracted from the original cost of the equipment

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Range of Values for A317

Minimum	Maximum
1	999999

#### Validation Rule for A317

-When entering an individual addition & betterment; A&B Date Done (A319), A&B Type (A318), A&B Pos/Neg Ind (A316), and A&B Amount (A317) must be reported

A&B Date Done	A319

#### The date of the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A319

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for A319

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -Addition and Betterment Date Done cannot be earlier than Built Date (BLDT).
- -Additions & Betterments Date Done cannot be later than today's date.

## **A&B Type** The type of individual addition and betterment as defined by Rule 107

Outside heater coils applied to tank shell by fusion welding. Includes

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A318

COIL	renewal in damaged car.
GNRL	General - Capitalized Additions and Betterments
INIT	Initial load of historical A&B amount as of Umler 4.6 implementation date $ \\$
JTHR	Jacketed thermal shield with integral headshield
NTHR	Non-jacketed thermal protection system. Includes renewal in damaged cars.
RUBB	Rubber, polyvinyl chloride and polyurethane elastomeric linings applied to inside of tank. Includes renewal in damaged car.
SPAR	Any type Sparger system applied. Includes renewal of lining in damaged cars.
STNS	Stainless steel inner shell, heater coils of other than ordinary steel pipe.
TKLI	Protective coating to inside of tank. Includes renewal of lining in

#### damaged car. Validation Rule for A318

- -For each equipment, only one Individual A&B Type can have a value of
- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.

# Special Permit

**B**595 **Regulatory Agency** 

=Mandatory ▲=Used in ETC Generation

#### The regulatory agency that issued the special permit or equivalency permit.

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B595

DOT Department of Transportation

TC Transport Canada

#### Validation Rule for B595

- Regulatory Agency must be selected when adding a Number (B595)

#### NOTES:

- A special permit from DOT or equivalency certificate from Transport Canada that waives or modifies compliance with a regulatory requirement, related only to the tank construction, interior lining/coating, or service equipment.
- Example Format: SP-xxxxxx for special permit or SR-xxxxxxxxxx for equivalency certificate.
- If the special permit or equivalency certificate requires the tank car to be stenciled, this element can be reported.
- If the special permit or equivalency certificate does not require the tank car to be stenciled, this element can be reported.
- Does not apply to AAR Service Trial (ST) stenciling or Alternate Inspection Program (AIP) or changes in commodity.

Permit Number

B596

Matches special permit or equivalency certificate number stenciled on the tank car.

Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for B596

 Regulatory Agency (B595) must be selected when adding special permit Number

#### NOTES:

- A special permit from DOT or equivalency certificate from Transport Canada that waives or modifies compliance with a regulatory requirement, related only to the tank construction, interior lining/coating, or service equipment.
- Example Format: SP-xxxxxx for special permit or SR-xxxxxxxxxx for equivalency certificate.
- If the special permit or equivalency certificate requires the tank car to be stenciled, this element can be reported.
- If the special permit or equivalency certificate does not require the tank car to be stenciled, this element can be reported.
- Does not apply to AAR Service Trial (ST) stenciling or Alternate Inspection Program (AIP) or changes in commodity.

# **Car Management**

**Pool Number** 

P001

Unique number used to indicate the grouping of equipment for a particular

Used for Transportation Codes. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add Back.

**Pool Control** 

TCPC

#### **Pool Control**

System Generated Field. Used for Transportation Codes. This element is not eligible for Input, Output or Query.

#### NOTES:

• For further explanation reference Appendices C and E.

**User Routing Instructions** 

**TCUR** 

The routing instruction reported by the user

Used for Transportation Codes.

### Permissible Values for TCUR

2 Trailer Service Rule 2

- G Contaminated commodity service
- M Mark canceled
- O Owner requested return
- U Unassigned equipment

#### NOTES:

For further explanation reference Appendix E.

**Umler Transportation Code** 

**TCOD** 

The type of assigned service, empty routing or restriction of the equipment

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

**Transportation Cond Code** 

TCCD

The AAR or FRA interchange restriction code

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

**Mechanical Restriction** 

TCME

User reported or system generated type of mechanical restriction

Used for Transportation Codes.

## Permissible Values for TCME

- S Scrap
- X AAR Interchange Restriction
- Y FRA Interchange Prohibited

#### NOTES:

• For further explanation reference Appendix D.1

**Mech Restriction Reason** 

**TCMR** 

The explanation of the Mechanical Restriction (TCME)

Used for Transportation Codes.

## **Permissible Values for TCMR**

- A Restricted Due to Age (Over 40-AAR, Over 50-FRA)
- B Restricted Due to Air Brakes
- C Restricted Due to Axles
- D Restricted Due to Couplers and Couplers Parts
- F Restricted Due to Couplers Yokes
- G Restricted Due to Draft Gears
- J Restricted Due to Journal Bearing and Journal Lubrication
- N Restricted Due to Trucks
- P Restricted Due to Truck Side Frames
- T Restricted Due to Trucks Bolsters
- U Restricted by AAR or Owner
- W Restricted Due to Wheels
- X Restricted Due to Scrap or Early Warning
- Z Restricted Due to Umler Conflict (Not Valid for User Input)

# NOTES:

- For further explanation reference Appendix D.2.
- The assignment of the Transportation Codes S\_, SX, XA, XZ and YA generate
  the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and
  mileage rate.

**Sys Gen Routing Inst** 

TCGR

The routing instruction generated by the system

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.5.

Loading Authority Fleet Status B597

Identifies when a car is listed on a fleet in the Loading Authority application

=Mandatory

▲=Used in ETC Generation

= Affects Rating

**– 125 –** 

=Conditionally Mandatory

June 2025

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B597

Yes

S Suspended

#### NOTES:

- When equipment is on a fleet the Loading Authority (LA) application will update the flag to 'Y - Yes'. When equipment is removed from a fleet the LA application will remove the 'Y - Yes'.
- When equipment is on a LA fleet that is suspended the LA application will update the flag to 'S – Suspended'. When the equipment is on a LA fleet that is no longer suspended the LA application will update the flag to 'Y - Yes'.

# **Train Service**

#### 286K Aprvd COC/FRA Waiver

R098

Indicates Tank Car has a valid FRA waiver, or has specifically an AAR-approved **Certificate of Construction** 

#### Permissible Values for B098

Yes - Tank car approved for GRL 286,000 pounds. Has a valid FRA waiver or specifically an AAR-approved Certificate of Construction

#### Validation Rule for B098

-Car must be stenciled with AAR specification if Gross Rail Load > 263,000 and the FRA/COC Waiver Allowing > 263,000 GRL is not set to YES

#### **Restricted Speed Empty**

**B180** 

Describes the maximum restricted speed the equipment can travel when empty

#### Range of Values for B180

Minimum	Maximum	
5	95	

## **Restricted Speed Loaded**

Describes the maximum restricted speed the equipment can travel when loaded

#### Range of Values for B181

Minimum	Maximum		
5	95		

**Shove Car to Rest B189** 

Identifies the car must be moved to rest by locomotive

#### Permissible Values for B189

Yes

B188 Shove Adj. Car to Rest Identifies the adjacent car must be shoved to rest by locomotive

#### Permissible Values for B188

Yes

1		
	Train Position Sensitive	B211
	Indicates there is a physical reason, limiting its position on a train	

#### Permissible Values for B211

**End of Train Only** Indicates the equipment must be placed at the end of the train (including per

### Permissible Values for B277

AAR RP-2001)

Yes

Check Trailing Tonnage	B044
Indicates the equipment has restrictions on trailing tonnage	

Permissible Values for B044

**Curve Negotiate Exception** 

Describes the requirement for negotiating a curve

#### Permissible Values for B178

- Restrictive Curve Negotiability, Section 2.1.4 of M-1001
- В Does not meet all Chapter XI Curving Requirements

#### **Loaded Net Braking Ratio**

B551

B178

Indicates calculated minimum loaded net braking ratio per AAR Specifications in place on built or rebuilt date (in percent).

System Generated Field. This element is not eligible for input.

#### Permissible Values for B551

-11.0

-8.5

#### NOTES:

- · Loaded Net Braking Ratio is determined as follows:
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Loaded Net Braking Ratio will be set to blank.
  - o If Built Date (BLDT) is greater than or equal to 1/1/1972 and less than 1/1/2004, than loaded Net Braking Ratio is 8.5%.
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is greater than or equal to 1/1/2004, then Loaded Net Braking Ratio is 11.0%.

#### **Owner-Provided Loaded Net Braking Ratio**

B552

Indicates an alternate minimum loaded net braking ratio provided by owner (in percent).

#### Range of Values for B552

Minimum	Maximum
8.5	14.0

## NOTES:

- Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net Braking Ratio (B551).
- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - Rebuilt Date (RBDT)
  - o Gross Rail Load/Weight (A266)
  - o Equipment Type Code (UMET)
  - Empty/Load Device Eqpd (B075)

## **Empty Braking Ratio**

**B553** 

Indicates calculated empty braking ratio per AAR Specifications in place on built or rebuilt date (in percent).

System Generated Field. This element is not eligible for input.

## Range of Values for B553

Minimum	Maximum
15.0	38.0

#### NOTES:

- Empty Braking Ratio is determined as follows;:
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Empty Braking Ratio will be set to blank.

## **Owner-Provided Empty Braking Ratio**

**B554** 

Indicates an owner supplied alternate empty braking ratio (in percent).

# Range of Values for B554

Minimum	Maximum
15.0	38.0

#### NOTES:

 Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net Braking Ratio (B551).

- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - o Rebuilt Date (RBDT)
  - o Gross Rail Load/Weight (A266)
  - o Equipment Type Code (UMET)
  - o Empty/Load Device Eqpd (B075)

# **Truck Components**

Axle Spacing Distance *Mandatory*The distance between axle centers on the same truck

#### Validation Rule for A294

- -UnStarred Cars with Gross Weight of 286,000 lbs. and Increased Gross Rail Load of 2 must have a Wheel Diameter of 36 inches
- -UnStarred Cars with Gross Weight of 286,000 lbs. and Increased Gross Rail Load of 2 must have a Wheel Diameter of either 36 or 38 inches
- -Cars with an Increased Gross Rail Load of 1 and Journal of G or M must have a Wheel Diameter of 38 inches
- -If Connected Unit Count (A020) is not reported, different Wheel Diameters cannot be reported

# Stability Device Equipped B199 Indicates a stability device is present on the truck

Affects Rating

### Permissible Values for B199

Y Yes

Bolster Component ID B351
Bolster Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Side Frame Component ID From Component Registry

8352

Data is Confidential. This element is not eligible for Input. Value does not carry

F70BHT

forward for Single Clone / Multi-Clone.

Wheelset Component ID B350

#### Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

# **Draft System Components**

Coupler Code A057

Defines the equipment coupler type

Unknown, built prior to 7/1/1997

#### Permissible Values for A057

1997UNK

#### Validation Rule for A057

- -If Rotary Coupler Style is reported, then Coupler Code must be a rotary coupler.
- -If Coupler Code is a rotary coupler, then Coupler Style must be R (Rotary).
- -Coupler Code of Type E Obsolete (Rule 16) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type E/F Obsolete (Rule 17) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type F Obsolete (Rule 18) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of FROTARY or EFROTARY cannot be reported for cars Built or Rebuilt on or after August 12, 2014.

#### NOTES:

- Obsolete: All Type D couplers are obsolete and should report code DOBS; cars with this coupler code will be restricted in interchange as discussed helow
- Unknown: If the coupler code is unknown or if the code stamped on the coupler is illegible, the code BUNK FUNK, EFUNK, or LOCOUNK should be reported.
- Special: Codes ESPEC, FSPEC, and EFSPEC have been created to decline coupler bodies that have been manufactured specifically for the equipment owner and are not listed in the attached table.
- The codes FROTARY and EFROTARY cannot be reported for equipment Built or Rebuilt since August 12, 2014.

# Coupler Style Mandatory Describes the basic coupler design of the equipment Affects Rating.

## Permissible Values for B058

B Bottom Shelf D Double Shelf P Plain R Rotary

## Validation Rule for B058

- -If Draft System Type (B073) is H (Hydraulic) then Coupler Style cannot be reported as M (Solid Drawbar) or L (Rotary Drawbar)
- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- -If Draft System Type (B073) of Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported

Inches of Travel B061

The number of inches a draft system will travel

Affects Rating.

# Range of Values for B061

Minimum	Maximum
1	36

#### Validation Rule for B061

- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- If Draft System Type (B073) of Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported

# Draft System Type Mandatory Describes the draft gear/underframe cushion type

## Affects Rating.

#### Permissible Values for B073

- C Cushioning Center of Car
- E Cushioning End of Car
- S Standard
- X Devices with less than 6 inches buff travel approved under AAR Standard S-060
- Y Devices with 6 to 10 inches of buff travel approved under AAR Standard S-060

#### Validation Rule for B073

- If Draft System Type (B073) is Standard Draft Gear (S), Inches of Travel (B061) cannot be reported
- If Draft System Type (B073) is reported as C, E, X, or Y then Inches of Travel (B061) must also be reported
- If Draft System Type (B073) of X, or Y is reported then Draft Gear Group/Cushion Unit Pocket (B562) cannot be reported
- If Draft System Type (B073) X is reported, the Inches of Travel (B061) value must be greater than or equal to 1 and less than 6
- If Draft System Type (B073) Y is reported, the Inches of Travel (B061) value must be greater than or equal to 6 and less than or equal to 10
- -If Draft System Type (B073) is S then Draft Gear Group/Cushion Unit Pocket (B562) may only be A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z (AAR Rule 21)
- -If Draft System Type (B073) is E then Draft Gear Group/Cushion Unit Pocket (B562) may only be EOC-1,EOC-1D, EOC-1B, EOC-2, EOC-2D, EOC-2B, EOC-3, EOC-3B,EOC-4, EOC-4B, EOC-5, EOC-5D, EOC-5B, EOC-6, EOC-6D, EOC-6B, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-8F, EOC-9, EOC-9B, EOC-9D, EOC-9E, EOC-10, EOC-10D, EOC-10B, EOC-10F, EOC-11, EOC-11D, EOC-11B,EOC-12, EOC-12D, EOC-12B, EOC-13, EOC-13B, EOC-14, EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16, EOC-16D, EOC-16B, EOC-17, EOC-17D, EOC-17B, EOC-18, EOC-18D, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-23, EOC-23B, EOC-24, EOC-24B, EOC-25E, EOC-26B, EOC-26F, or EOC-27D, or EOC-27E (AAR Rule 59)

A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, Z (*AAR Rule 21*). Validation Rule(s) for B562

# **Umler**<sup>6</sup>

## **Data Specification Manual**

- Draft Gear Group/Cushion Unit Pocket (B562) is mandatory for equipment built on or after June 13, 2019, unless Draft System Type (B073) is reported as X or Y
- -If Draft Gear Group/Cushion Unit Pocket (B562) is not equal to A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z, then Cushion Unit Type (B563) must be populated
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-6, EOC-7 EOC-7B, EOC-8B, EOC-9, EOC-9B, EOC-9D, EOC-10, EOC-10B, EOC-10D, EOC-14, EOC-14B, EOC-18D, EOC-23, EOC-23B, EOC-24, EOC-25E, EOC-26B, or EOC-27D then the Cushion Unit Type (B563) must be 1
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-9E, EOC-26F, or EOC-27E, then the Cushion Unit Type (B563) must be 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-11, EOC-12, EOC-13, EOC-13B, EOC-15, EOC-15B, EOC-15D, EOC-17, EOC-17B, EOC-17D, EOC-18, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-24B, COC-3, COC-5, or COC-7 then the Cushion Unit Type (B563) must be 1 or 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-8F or EOC-10F then the Cushion Unit Type (B563) must be 2 or 3
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-5, EOC-5B, EOC-5D, EOC-6, EOC-6B, EOC-6D EOC-11B, EOC-11D, EOC-12B, EOC-12D,
- or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3 -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-16D, or COC-1 then the Cushion Unit Type (B563) must be 1, 2, or 4
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D, EOC-3, EOC-3B, EOC-4, EOC-4B, or COC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, or 4
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1, EOC-1B, EOC-1D, or EOC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, 4,
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-8 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or 5
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1D, EOC-2,EOC-2D, EOC-2B, EOC-3, EOC-3B, EOC-5, EOC-5D, EOC-5B, EOC-6D, EOC-7, EOC-7B, EOC-9, EOC-9B, EOC-9D, EOC-9E, EOC-10D, EOC-11, EOC-11B, EOC-11D, EOC-12D, EOC-14,EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16D, EOC-17D, EOC-23, EOC-23B, EOC-27D, or EOC-27E then the Inches of Travel (B061) must be 10
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-19, EOC-19B, EOC-22, EOC-22B, or EOC-25E then the inches of travel
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-20 or EOC-20B then the Inches of Travel (B061) must be 14
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1B, EOC-4, EOC-4B, EOC-6, EOC-6B, EOC-8, EOC-8B, EOC-8F, EOC-10, EOC-10B, EOC-10F, EOC-12, EOC-12B, EOC-13, EOC-13B, EOC-17, EOC-17B, EOC-18, EOC-18D, EOC-18B, EOC-21, EOC-21B, EOC-24, or EOC-24B then the Inches of Travel (B061) must be 15
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-2, COC-3, COC-4, COC-5, COC-6, or COC-8 then the Inches of Travel (B061) must be 20
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 1 or 2, then the Inches of Travel (B061) must he 20
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 4, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 2, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 1, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1 then the Inches of Travel (B061) must be 10, 12, or 15
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-26, then the Inches of Travel (B061) must be 18

#### Note:

Reference AAR Field Manual Interchange Rule(s) 21 and 59.

**Cushion Unit Type** Cushion Unit Type value as listed in AAR Field Manual Interchange Rule 21 and

Carry forward for Single Clone / Multi-Clone / Restencil / Add-Back / Equipment Group Change.

#### Permissible Values for B563

- 1 Type 1
- 2 Type 2
- 3 Type 3

- 4 Type 4
- 5 Type 5
- S Type S

## Validation Rule(s) for B563

- Cushion Unit Type (B563) is mandatory for equipment built on or after June 13.2019.
- -If Draft Gear Group/Cushion Unit Pocket (B562) is not equal to A. B. C. D. F. E. G, H, J, K, L, M, N, P, Q, R, S, or Z, then Cushion Unit Type (B563) must be populated.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-6, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-9, EOC-9B, EOC-9D, EOC-10, EOC-10B, EOC-10D, EOC-14, EOC-14B, EOC-18D, EOC-23, EOC-23B, EOC-24, EOC-25E, or EOC-26B then the Cushion Unit Type (B563) must be 1.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-9E, EOC-26F, or EOC-27E, then the Cushion Unit Type (B563) must be 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-11, EOC-12, EOC-13, EOC-13B, EOC-15, EOC-15B, EOC-15D, EOC-17, EOC-17B, EOC-17D, EOC-18, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-24B, COC-3, COC-5, or COC-7 then the Cushion Unit Type (B563) must be 1 or 2.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-8F or EOC-10F then the Cushion Unit Type (B563) must be 2 or 3.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-5, EOC-5B, EOC-5D, EOC-6, EOC-6B, EOC-6D EOC-11B, EOC-11D, EOC-12B, EOC-12D, or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-16D, or COC-1 then the Cushion Unit Type (B563) must be 1, 2, or 4.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D, EOC-3, EOC-3B, EOC-4, EOC-4B, or COC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, or 4.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1, EOC-1B, EOC-1D, or EOC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, 4,
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-8 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or 5.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 1 or 2, then the Inches of Travel (B061) must
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 4, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 2, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 1, then the Inches of Travel (B061) must be

#### Note:

Reference AAR Field Manual Interchange Rule(s) 21 and 59.

**Coupler Component ID B353** Coupler Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

**Cushioning Unit Component ID** B361 Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

# **Unit Segment Components**

**Unit Equipment Group** A307

Describes the equipment type of the platform

Affects Rating

**B**565

June 2025

## **Data Specification Manual**

#### Permissible Values for A307

BOXCBox CarFLATFlat CarGONDGondolaHOPPHopperIFLTIntermodal FlatTANKTank Car

VFLT Vehicular Flat

#### Validation Rule for A307

- -Unit Equipment Group cannot be reported if the Connected Unit Count (A020) is not reported
- -Unit Equipment Group must be reported if Connected Unit Count (A020) is reported

Unit Tare Weight
------------------

The unit segment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

# Minimum Maximum 10000 500000

#### Validation Rule for A299

- -Unit Tare Weight must not be reported if the Connected Unit Count (A020) is not reported
- -Unit Tare Weight must be reported if Connected Unit Count (A020) is reported
- -Unit Tare Weight for Boxcars must be less than or equal 160,000 lbs.
- -Unit Tare Weight for Refrigerators must be less than or equal 140,000 lbs.
- -Unit Tare Weight for Gondolas must be greater than or equal 30.000 lbs.
- -Unit Tare Weight for Gondolas must be less than or equal 110,000 lbs.
- -Unit Tare Weight for Hoppers must be greater than or equal 23,000 lbs.
- -Unit Tare Weight for Hoppers must be less than 120,000 lbs.
- -Unit Tare Weight for Tanks must be greater than 31,000 lbs.
- -Unit Tare Weight for Tanks must be less than 200,000 lbs.
- -Unit Tare Weight for Vflats must be greater than 55,000 lbs.
- -Unit Tare Weight for VFlats must be less than 136,000 lbs.
- -Unit Tare Weight for IFLTs must be greater than 10,000 lbs.
- -Unit Tare Weight for IFLTs must be less than 72,000 lbs.
- -Unit Tare Weight for all flats other than VFlats with ETC Q\_\_\_ must be greater than 23,000 lbs.
- -Unit Tare Weight for all flats other than VFlats with ETC Q\_\_\_ must be less than 500.000 lbs.
- -Unit Segment Tare Weights must add up to the Total Tare Weight (A259)
- -Unit Tare Weight (A299) value must be reported to the nearest 100 pounds

### Unit Load Limit A300

The maximum permissible weight of the commodity that can be loaded into the unit segment, reported in pounds

## Range of Values for A300

Minimum	Maximum
20000	500000

## Validation Rule for A300

- -Unit Load Limit must not be reported if the Connected Unit Count (A020) is not reported
- -Unit Load Limit must be reported if Connected Unit Count (A020) is reported
- -Unit Segment Load Limits must add up to the Load Limit (LDLT)

# **Brake System Components**

Emergency Brake Valve CID	B354
Component ID from Component Registry	

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Emergency Valve COTS Date	B567
Brake valve emergency portion recondition date	

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

## NOTES:

 Emergency Valve COTS Date is system-generated from a Emergency Brake Valve Inspection.

Emergency Valve OEM Warranty Date B568

Brake valve emergency portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

 Emergency Valve OEM Date is system-generated from a Emergency Brake Valve Inspection.

Emergency Valve Part Number B569

Brake valve emergency portion part number

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES

 Emergency Valve Part Number is system-generated from a Emergency Brake Valve Inspection.

Service Brake Valve CID B357

Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Service Valve COTS Date B564

## Brake valve service portion recondition date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

 Service Valve COTS Date is system-generated from a Service Brake Valve Inspection.

Service Valve OEM Warranty Date

Brake valve service portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

• Service Valve OEM Date is system-generated from a Service Brake Valve Inspection.

Service Valve Part Number B566

Brake valve service portion part number

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES

Service Valve Part Number is system-generated from a Service Brake Valve Inspection.

Slack Adjuster CID B359

Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

# **Tank Car Components**

Pressure Relief Valve CID B360

Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

## Miscellaneous

Commercial Owner CIF B049

The Customer Identification File (CIF) number for a commercial owner at a

●=Mandatory ▲=Used in ETC Generation = Affects Rating −131 − #=Conditionally Mandatory

#### specific location

Commercial Lessee CIF B048

The Customer Identification File (CIF) number for a commercial lessee at a specific location

Value does not carry forward for Single Clone / Multi-Clone / Add Back. Validation Rule for DTDN

-The inspection date must not be 60 days before the Build Date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

**Umler Effective Date** 

**EFDT** 

The date the rating activity (pre-registration, modification, etc.) is expected to occur

This element is not eligible for Query. Does not Carry Forward.

#### Validation Rule for EFDT

-Effective Date cannot be set to more than 13 months in the future.

#### NOTES:

 Effective Date will default to the 1st of the following month that equipment is registered

**Inspection Reporter** 

REPT

The SCAC that reported the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

Location/SPLC

SPLC

The SPLC of the inspecting location; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

Air Brake Test Device

B523

Indicates the type of test device used to perform the Air Brake Test

#

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Permissible Values for B523

- A Automatic (Non 4-Pressure)
- M Manual
- P Automatic (4-Pressure)

#### Validation Rule for B523

 -Air Brake Test Device (B523) must be reported for Air Brake Test inspection reported on or after December 10, 2020

Insp Service Valve COTS Date

B570

Brake valve service portion recondition date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

- Reports of 9999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYY

Insp Service Valve OEM Warranty Date

B571

Brake valve service portion Original Equipment Manufacturer warranty date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

**Insp Service Valve Part Number** 

B572

Brake valve service portion part number

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

# Inspection

**ABT Due Date (Repair Track)** 

DU13

The due date of the air brake test per AAR Field Manual Rule 3

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**ABT 5-8 Year Due Date** 

**DU58** 

The 5-8 year due date for the air brake test (ABT) after the ABT Due Date (Repair Track)

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**Inspection Date Done** 

DTDN

The date the inspection was completed; used for all inspection types reported on equipment

#### NOTES:

- Reports of 999999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYYYY

Insp Emergency Valve COTS Date

B573

Brake valve emergency portion recondition date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### NOTES:

- Reports of 9999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYY

Insp Emergency Valve OEM Warranty Date

B574

Brake valve emergency portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

- Reports of 999999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYYYY

Insp Emergency Valve Part Number

B575

Brake valve emergency portion part number

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Insp Service Valve Location Mandatory

B576

Brake valve service portion location

.

Value does not carry forward for Single Clone / Multi-Clone.

Insp Emergency Valve Location Mandatory

B577

Brake valve emergency portion location reported on an emergency brake valve inspection

Value does not carry forward for Single Clone / Multi-Clone.

# General **USCD Status Code Mandatory** Identifies the current operational state Does not Carry Forward.

#### **Permissible Values for USCD**

ACTIVE INACTIVE 1

Ρ PRE-REGISTERED

#### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-Registered.
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID	0001
The equipment stenciled number	

#### Validation Rule for 0001

- -Equipment Number must not be larger than 6 digits (i.e., 999999) NOTES:
- Equipment ID includes the mark and number stenciled on the equipment. Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD999999).
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

Mechanical Designation Mandatory	UMMD
Equipment description without physical dimensions	•

Used for Transportation Codes.

## **Permissible Values for UMMD**

FB Flat-Bulkhead

**FBC** Flat-Bulkhead Center Beam **FBS** Flat-Bulkhead, Specially Equipped Flat-Depressed (Heavy Duty) FD FDC Flat-Depressed Center Beam

Flat-Fitted with Cross Supports for Longitudinal Loading FL

Flat-Straight Deck FM

**FMS** Flat-Straight Deck, Specially Equipped

Flat-Well (Heavy Duty) FW

1 F Flat-Special Design for demountable containers

LP Flat-Special Design

LS Flat-Special Design with two interlocking units

MWF MoW - Flats

MWG MoW - Section Gang or Track Inspection Car **MWRC** MoW - Remote Control Equipment

## **Equipment Type Code**

An alpha numeric code that describes the physical attributes of equipment

System Generated Field. This element is not eligible for Input.

#### NOTES:

• Please Refer to Appendix I for More information Regarding ETC Generation

**Dedicated Service B346** Indicates the type of dedicated service car is equipped to handle

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B346

- Aluminum Ingot
- Airplane Wings / Fuselage В
- С Coiled Rod

- D Coiled Steel
- Ε Hot Reinforcement Bars
- F Frames
- G Logs
- **Utility Poles** Н
- Pipe
- Plate Steel 1
- Steel Rail Κ
- Wind Turbine

#### Validation Rule for B346

-Dedicated Service Type can only be reported if Mechanical Designation (UMMD) is FMS

#### Maint of Way Service Type **B403** Identifies equipment Maintenance Of Way function

Value does not carry forward for Equipment Group Change.

## Permissible Values for B403

- Crane / Boom Support Car C2
- F4 Flat-Wheel Sets
- T<sub>4</sub> Training Car
- T8 Track Geometry Car

#### Validation Rule for B403

- Maint of Way Service Type can only be listed on records where the Equipment Group (0002) or Pseudo Equipment Group (B547) is listed as MISC

#### BLDT **Built Date Mandatory** The date the construction of the equipment is complete

Data is Confidential. Used for Transportation Codes. Affects Rating. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for BLDT

Minimum	Maximum
1/1/1900	12/31/9999

#### **Validation Rule for BLDT**

- -Built Date must be within the last 99 years
- -Built Date must not be in the future for equipment in Active Status
- -Prior and target equipment's Built Date (BLDT) must match for restenciling
- -Built Date cannot be updated within 30 days of the End of Service Date (B078)

#### NOTES:

- · Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

Rel	built	/ ILS Date		RBDT

# The date the re-construction of the equipment is complete

Data is Confidential. Value does not carry forward for Single Clone / Multi-

# Range of Values for RBDT

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for RBDT

- -Rebuilt/Increased Life Service Date must be after the Built Date (BLDT)
- -Rebuilt Date must not be more than 70 years after the Built Date (BLDT)
- -Rebuilt Date is required for Extended Service Code (A096) 1, 2, or 3 for Increased Life Service
- -Rebuilt Date is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years of service
- -If Rebuilt Date is reported then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life Service

- Railroad cars -- applicable only to cars meeting status as provided in both STB Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office Manual.
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt

UMET

**PRID** 

# **Data Specification Manual**

Date unless car has been approved by the AAR.

Rebuilt Flag RBFL

#### Identifies the equipment is nearing its end of life cycle

Data is Confidential. System Generated Field. This element is not eligible for Input.

#### **Permissible Values for RBFL**

N No Y Yes

Owner *Mandatory* UMOW

Primary reporting mark of the railroad or private company owning the car

Value does not carry forward for Single Clone / Multi-Clone / Single Restancil.

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### NOTES:

 Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.

Lessee LESE
The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### Validation Rule for LESE

- -Umler Owner (UMOW) and Lessee are not allowed to be equal
- -Lessee cannot be a child reporting mark

#### NOTES:

 In order to assign privately marked cars to a pool, a railroad reporting mark must be reported.

Equipment Group Mandatory 0002

Identifies the various major car types

Used for Transportation Codes. Affects Rating.

Maintenance Party MNPT

The parent reporting mark of the company responsible for the maintenance and repairs of the equipment

Does not Carry Forward.

Mark Owner Category B201

The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

#### Permissible Values for B201

- B US Private
- C Canadian Private
- F Foreign Private
- H Canadian Class II
- I Canadian Class I
- J Mexican Class I
- K Canadian Class III
- M Mexican PrivateN US Private Steamship
- O Canadian Private Steamship
- P Mexican Private Steamship
- Q Foreign Private Steamship
- R US Class II Railroad
- U US Class I Railroad
- V US Class III Railroad
- W Mexican Class II Railroad
- Y Mexican Class III Railroad

#### NOTES:

 This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry. Prior Equipment ID

The previous reporting mark and number of the equipment Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for PRID

- -Prior and target equipment's Built Date (BLDT) must match
- -The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

#### NOTES:

Prior ID enables equipment records to share the same historical lineage.
 Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

Last Update Date B122

Date of the last Umler element change

System Generated Field. This element is not eligible for Input.

Equipment Add Date B082

Date the reporting mark and number was added to the Umler system

System Generated Field. This element is not eligible for Input.

Status Change Reason USCR Identifies the reason for the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

#### **Permissible Values for USCR**

- I Initial Load
- M Movement
- O Status Changed Manually
- R Restencil

#### NOTES:

- If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

Status Change Date USCT
Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

Extended Service Mandatory A096

A code indicating the eligibility of an increase to the life cycle

Used for Transportation Codes. Value does not carry forward for Single Clone /

# Multi-Clone. Permissible Values for A096

- 1st ILS Inspection, additional 5 years of Service
- 2 2nd ILS Inspection, additional 5 years of service (10 years total)
- 3 3rd ILS Inspection, additional 5 years of service (15 years total)
- C Built New between January 1, 1964 June 30, 1974, Certified for 50 Years of Service, Built New Before July 1, 1974 & Received AAR Waiver
- E Built new from July 1,1974, Qualified for 50 Years Service
- N Built Before January 1, 1964, Qualified for 40 Years Service
- R Rule 88, Rebuilt cars
- U Built between January 1, 1964 June 30, 1974, Qualified for 40 Years & eligible for certification for 50 Years Service
- V Car is certified (FRA Waiver & AAR) for 65 years of service from date built new from January 1, 1964

#### Validation Rule for A096

**– 136 –** 

- -If Rebuilt Date (RBDT) is reported, then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life Service
- -Extended Service Code of C cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974
- -Extended Service Code of E cannot be reported if the car was built before July 1, 1974

# **Umler**®

## **Data Specification Manual**

- Extended Service Code of N cannot be reported if the car was built on/after January 1, 1964
- -Extended Service Code of U cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974

#### NOTES:

- Value is used to calculate End of Service Date (B078).
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years service.
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) 1, 2, 3, and V for Increased Life Service.

End of Service Date B078

#### Indicates the date of the end of equipment life

Data is Confidential. System Generated Field. This element is not eligible for Input.

#### NOTES:

• Data becomes non-confidential two years prior to End of Service Date.

Do Not Load After

Equipment should not be loaded after date shown in the element

#### Data is Confidential.

#### Validation Rules for B590

- -Do Not Load After (B590) cannot be updated thirty days prior to the date shown in the element.
- -Do Not Load After (B590) cannot be updated within thirty days of the End of Service Date (B078).
- -Do Not Load After (B590) date cannot be on or after the End of Service (B078) date

#### NOTES:

- The element will be initially populated by End of Service (B078) minus 30 days.
- Data becomes non-confidential thirty days prior to the Do Not Load After (B590) date.

**Equipment Identification** 

EINN

**B**590

# Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

#### NOTES:

 Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections.

Info Conflict Status

B355

Indicates that an Informational Conflict exists on the Equipment record

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Conflict Status B050

Identifies the escalation level of equipment in active conflict

System Generated Field. Affects Rating. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B050

- 1 Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Date of Original Conflict** 

B063

**– 137 –** 

The date the equipment was originally placed in the current conflict

System Generated Field. This element is not eligible for Input.

**Next Conflict Status** 

B135

Identifies the next escalation level of an equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B135

- 1 Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

Notice Indicator B137

#### Identifies equipment in error in Umler Notice Management

System Generated Field. This element is not eligible for Input.

oystem senerated rield. This element is not engiste is impact

Conflict Status Next Date

B062

The date the conflict status will be escalated

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

Rate Indicator A070

Indicates the rate type applicable to the unit

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for A070

- 0 Zero-Rated Due to Conflict Errors
- 2 Private Mileage Rate
- 4 Private Car Owner Designated Rate
- 6 Zero-Rated Scrap (S\_SX), AAR Overage (XA), FRA Overage (YA), Umler Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].
- M Railroad Market Rate
- Q Zero-Rated Railroad Market Rate Due to Conflict Errors

## NOTES:

 If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.

**Private Zero Rate** 

B150

Indicates a private car is subject to contractual agreement, nullifying mileage rates

Affects Rating.

#### Permissible Values for B150

Y Yes

### NOTES:

• Reporting "Y" generates Rate Indicator (A070) value 6 and a zero rate.

**TTX Hourly Rate** 

B212

Time Charge-The TTX hourly rate for the equipment

Data is Confidential. This element is not eligible for Query.

Range of Values for B212

Minimum Maximum
0 9

### Validation Rule for B212

-TTX Hourly rate can only be set on TTX owned Equipment.

**TTX Mileage Rate** 

B213

Mileage Charge-The TTX mileage rate for the equipment

Data is Confidential. This element is not eligible for Query.

Range of Values for B213

Dating

=Conditionally Mandatory

# Umler'

# **Data Specification Manual**

Minimum	Maximum
0	1

#### Validation Rule for B213

-TTX Mileage rate can only be set on TTX owned Equipment.

First Movement Date	USAT
The first movement date under the stenciled mark of the equipment	

This element is not eligible for Input. Does not Carry Forward.

Equipment Add Company	B083
The reporting mark of the company that added the equipment	

System Generated Field. This element is not eligible for Input.

Registration Reason	B174
The code indicating the reason this equipment is added	

### Does not Carry Forward. Permissible Values for B174

Α Add-Back Ν New

Pending Restencil R Restencil

Restencil Program Ind	B177
Identifies the equipment is under a restencil program	

#### Permissible Values for B177

Yes

Delete Reason Code	B064
A code that designates the reason the equipment has been deleted	

Value does not carry forward for Add Back.

#### Permissible Values for B064

- Restenciled
- D Destroyed or wrecked
- L Lease terminated, removed from fleet
- Ρ Retired unserviceable beyond economic repair
- R Rebuilt
- S Sold Serviceable
- W Over age retired for dismantling
- Error, reporting did not exist
- Ζ Other

Non-Compliant Wheelsets	B544
Equipment record is incomplete and has a missing wheelset component	(ID
association, Refer to AAR Field Manual Rule 44 for industry requirem	ents 🌞

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for B544

- -A Wheelset Component ID is required for each applicable location on equipment built on or after January 1, 2016
- -A Wheelset Component ID is required for each applicable location on equipment rebuilt on or after January 1, 2016 and Gross Rail Load (A266) is greater than 268,000 lbs

#### NOTES:

- A "Y" will be system generated if the equipment is active and the number of Wheelset CID's required is not equal to the Axle Count (A024) on the
- Validation rule applies to equipment that has been in Active status for 60 days

# **Pseudo Equipment Group**

Equipment needs to be identified as a miscellaneous record while maintaining all elements linked to the original equipment group

System Generated Field.

#### Permissible Values for B547

MISC Miscellaneous

# Weight

Gross Rail Load/Weight Mandatory

A266

Flat Cars

The maximum permissible weight on rail of the equipment and the load,

reported in pounds

Affects Rating.

## Range of Values for A266

Minimum	Maximum
108000	2835000

Validation Rule for A266

-Gross Rail Load must be equal to the Load Limit (LDLT) plus the Tare Weight (A259)

#### NOTES:

Use Table 1 below to determine Gross Rail Load, if Qualification for Increased Gross Rail Load (B344) does not exist.

#### TABLE 1 -

Journal Size	Load per Axle	Gross Rail Load for 4- axle Equipment
B - 4 1/2" x 8"	25,750 lbs.	103,000 lbs.
C - 5" x 9"	35,500 lbs.	142,000 lbs.
D - 5 1/2" x 10"	44,250 lbs.	177,000 lbs.
E - 6" x 11"	55,000 lbs.	220,000 lbs.
E - 6" x 11" (w/ 28"	48,750 lbs.	195,000 lbs.
1W wheels)		
F - 6 1/2" x 12"	65,750 lbs.	263,000 lbs.
G - 7" x 12"	78,750 lbs.	315,000 lbs.
K - 6 1/2" x 9"	71,500 lbs.	263,000 lbs.
M - 7" x 9"	78,750 lbs.	315,000 lbs.

Use Table 2 below to determine Gross Rail Load for 4-axle equipment if Qualification for Increased Gross Rail Load (B344) exists.

### TABLE 2 -

Qualification for Increased Gross Rail Load (B344)	Journal Size	Gross Rail Load
1	K - 6 1/2" x 9"	286,000 lbs.
1	G – 7" x 12"	286,000 lbs.
1	M – 7" x 9"	286,000 lbs.
2	F - 6 1/2" x 12"	286,000 lbs.
2	K - 6 1/2" x 9"	286,000 lbs.
3	F - 6 1/2" x 12"	268,000 lbs.
3	K - 6 1/2" x 9"	268,000 lbs.

- · For multi-unit equipment, report the total gross rail load for the entire set.
- Refer to Field Manual Rule 70 if additional information is required.

A Gross Rail Load less than the listed or calculated values may be entered if:

- Star Code (A247) is R or S, and
- Load Limit (LDLT) must also be reduced, ensuring Tare Weight (A259) plus Load Limit (LDLT) equals the reported Gross Rail Load.

For equipment having two or more different journal sizes, see following examples:

Example for Drawbar Connected:

- A 3-unit drawbar connected car has 12 axles.
- The end units (Locations A and B) each have 4 axles with E 6" x 11" iournals.
- The intermediate unit (Locations C) has 4 axles with F 6 1/2" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

=Mandatory ▲=Used in ETC Generation

8 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 440,000 lbs. + 4 ea. F-6 1/2" x 12" journal axles X 65,750 lbs. per axle = 263,000 lbs.

Gross Rail Load = 703,000 lbs.

**Example for Articulated Connected:** 

A 5-unit articulated car has 6 trucks (12 axles).

The end trucks (Locations A and B) each have 2 axles with E - 6" x 11" journals.

The intermediate trucks (Locations C, D, E, and F) each have 2 axles with G - 7" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

- •
- 4 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 220,000 lbs.
- + 8 ea. G-7" x 12" journal axles X 78,750 lbs. per axle = 630,000 lbs.
- Gross Rail Load = 850,000 lbs.

Tare	Weig	tht M	land	atory
------	------	-------	------	-------

A259

The equipment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

#### Affects Rating.

#### Range of Values for A259

Minimum	Maximum
34300	1287000

#### Validation Rule for A259

- Tare Weight (A259) value must be reported to the nearest 100 pounds **NOTES:**
- Do not report an average Tare Weight for car series, except for Pre-Registered cars
- When cars are made active, the actual Tare Weight must be recorded
- For current single-unit FLATs, lowest tare is 34,320 lbs. (Round down to 34,300). Largest tare weight for 4-axle car is approx. 143,000 lbs. Maximum permissible value shown is 143,000 lbs. X 9 = 1,287,000.

#### **Load Limit Mandatory**

**LDLT** 

The maximum permissible weight of the commodity that can be loaded into the equipment, reported in pounds

Used in ETC Generation. Affects Rating.

#### Range of Values for LDLT

Minimum	Maximum
35000	2225000

#### NOTES:

- For connected unit cars report the sum of the load limits for all units in the
- For current single-unit FLATs, lowest load limit is 35,000 lbs. Largest tare weight for a 4-axle car is approx. 250,000 lbs. Maximum permissible value shown is 250,000 lbs. x 9 = 2,225,000 lbs.

## Weighing Status Mandatory

A289

Indicates the weight information is an estimate or an actual measurement

# Value does not carry forward for Single Clone / Multi-Clone. Permissible Values for A289

- A Actual
- E Estimated
- V Verified correct Tare Weight
- X Tare Weight subject to verification (System Generated)

#### Validation Rule for A289

- -Equipment cannot be within a series of 10 with identical Tare Weights (A259), refer to Appendix P for further information on resolving tare weight conflicts
- -When Status Code changes to Active or Inactive Weighing Status must be reported as Actual (A) or Verified (V) within 60 days of Status Code change

Weighing Date A288

The date the equipment was actually weighed

Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A288

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for A288

- -If Weighing Date is reported the Tare Weight (A259) must be reported
- -When Weighing Date is reported then Weighing Status (A289) must be A (Actual) or V (Verified)
- -If Weighing Status (A289) is A (Actual) or V (Verified correct Tare Weight) then Weighing Date must be reported
- -Weighing Date must be on or before the current date
- -Weighing Date cannot be before Built / Rebuilt date

Cubic Feet Capacity	A067
The maximum interior cubic feet capacity of the equipment	

## Range of Values for A067

Minimum	Maximum
2400	8000

# Validation Rule for A067

-Cubic Feet Capacity can only be reported on Flat Cars having a Permanent Container

#### NOTES:

For connected unit cars report the sum of all units cubic capacity.

Star Code A247

Indicates a reduction of the Load Limit (LDLT) of the equipment per AAR Rule 70

Affects Rating

#### Permissible Values for A247

- R Body Capacity less than Truck Capacity
- S Reduced Load Limit

#### NOTE:

 Star Code must be reported if Gross Rail Load (A266) is less than the maximum gross rail allowed for the reported combination of Axle Count (A024) and Journal Size (A147)

Qual for Inc GRL B344

Code designating AAR approval for operating 4-axle equipment at a gross rail load greater than 263,000 lbs. per AAR Rule 88

#### Permissible Values for B344

- 1 Rule 88 IGRL Code 1 (> 263,000 lbs. and <= 286,000 lbs. GRL per AAR Specification S-286)
- 2 Rule 88 IGRL Code 2 (> 263,000 lbs. and <= 286,000 lbs. GRL)
- 3 Rule 88 IGRL Code 3 (> 263,000 lbs. and <= 268,000 lbs. GRL)

#### Validation Rules for B344

- -Equipment having Qualification for Increased Gross Rail Load of 1 or 2 must have a Gross Rail Load (A266) that does not exceed 286,000 lbs.
- -Equipment having Qualification for Increased Gross Rail Load of 3 must have a Gross Rail Load (A266) that does not exceed 268,000 lbs.
- -Equipment having Qualification for Increased Gross Rail Load of 1 must have a Journal Size (A147) of K, G, or M
- -Equipment having Qualification for Increased Rail Load of 2 or 3 must have a Journal Size (A147) of F or K
- -Equipment having Qualification for Increased Gross Rail Load of 1, 2, or 3 must have a Wheel Diameter (A294) of 36 or 38
- Equipment having Qualification for Increased Gross Rail Load (B344) of 3 and a Gross Rail Load (A266) less than 268,000 lbs., must have Star Code of S

#### NOTES:

 Qualification for Increased Gross Rail Load must be granted by the AAR, and applies only to 4-axle equipment approved for gross rail loads greater than 263,000 lbs. and less than or equal to 286,000 lbs. It does NOT apply to 4axle, 315,000 lbs. gross rail load equipment operating with a Star Code.

# **Dimension**

Plate Code Mandatory A046 Indicates the extreme height and width clearance of the equipment

Affects Rating

#### Permissible Values for A046

- В Plate Code B
- C Plate Code C
- F Plate Code E
- F Plate Code F
- Clearance Code G G
- Plate Code N Ν

#### NOTES:

- For a description of Plate Codes, please see Appendix J at the back of this manual.
  - o Report B: If clearance does not exceed Plate B
  - Report C: If clearance is greater than Plate B. but does not exceed Plate C
  - Report E: If clearance is greater than Plates B and C, but does not exceed Plate F.
  - o Report F: If clearance is greater than Plates B, C and E, but does not exceed Plate F
  - o Report G: If clearance exceeds Plates B, C, E, F, and N.
  - o Report N: If clearance is greater than Plates B, C, E, and F, but does not exceed Plate N.
- There is no AAR Plate G. Clearance Code G is included in Umler to represent equipment that does not fit any existing AAR clearance plates.
- For ARTICULATED/MULTI-UNIT SET report the most restrictive clearance plate of UNIT in the set.

#### **Outside Length Mandatory**

OSLG

The outside length over pulling faces of couplers in normal position

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for OSLG

Minimum	Maximum
24 ft 0 inches	2330 ft 0 inches

#### Validation Rule for OSLG

- -Non-Articulated Flat Cars cannot have an Outside Length greater than
- -Outside Length (OSLG) on freight cars must exceed the Inside Length (A135) by 2 feet or more
- -Outside Length (OSLG) on freight cars (except refrigerators) must not exceed Inside Length (A135) by more than 16 feet
- -Outside Length (OSLG) on refrigerator cars (Mechanical Designation RB, RBL, RP, RPL, or RC) must not exceed Inside Length (A135) by more than 26 feet

#### NOTES:

- For connected unit cars report the maximum coupled length of the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

#### **Outside Extreme Width Mandatory**

A186

The outside extreme width of the equipment

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A186

Minimum	Maximum
7 ft 0 inches	12 ft 7 inches

#### Validation Rule for A186

- -Outside Extreme Width must not exceed 10 feet 8 inches for Plate Codes B, C, E, F, or N
- -Outside Extreme Width (A186) for Plate Code A must not be less than 10
- -Outside Extreme Width (A186) for Plate Code A must not exceed 10 feet 10 inches.

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

## **Outside Extreme Height Mandatory**

A185

Height from top of rail to extreme projecting height

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A185

Minimum	Maximum
2 ft 0 inches	22 ft 6 inches

#### Validation Rule for A185

- -Flat Cars with Plate Code B must not exceed a Maximum Outside Extreme Height of 15 feet 1 inches
- -Flat Cars without (Canopy and (Plate Code C or I)) must not exceed Outside Extreme Height of 15 feet 6 inches
- -Flat Cars without (Canopy and (Plate Code E or J)) must not exceed Outside Extreme Height of 15 feet 9 inches
- -Flat Cars without (Canopy and (Plate Code F or K)) must not exceed Outside Extreme Height of 17 feet 0 inches
- -Flat Cars (UMMD = FMS) without (Canopy and (Plate Code B or H)) must not exceed Outside Extreme Height of 15 feet 1 inches
- -Flat Cars (UMMD = FMS) without (Canopy and (Plate Code C or I)) must not exceed Outside Extreme Height of 15 feet 6 inches
- -Flat Cars (UMMD = FMS) without Canopy and with Plate Code E or J must have Outside Extreme Height of less than or equal to 15 feet 9 inches
- -Flat Cars (UMMD = FMS) without Canopy and with Plate Code F or K must have Outside Extreme Height of less than or equal to 17 feet 0 inches
- -Flat Cars (UMMD = FMS) with Canopy must have Outside Extreme Height of less than or equal to 22 feet 6 inches
- -Flat Cars (UMMD = FMS) with Canopy must have Outside Extreme Height greater than or equal to 17 feet 0 inches
- -Outside Extreme Height for Plate Code N must be less than or equal to 17 feet 1 inch

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

## Outside Height Extr Width Mandatory

A187

The highest point at which the extreme width of the equipment occurs

Displayed in feet and inches on the Web. Stored in inches.

## Range of Values for A187

Minimum	Maximum
1 ft 0 inches	20 ft 0 inches

# **Validation Rule for A187**

- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 8 inches if Outside Height Extreme Width is 13 feet 10 inches or less
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 7 inches if Outside Height Extreme Width is 13 feet 11 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 0 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 4 inches if Outside Height Extreme Width is 14 feet 1 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 2 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 3 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 4 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 9 inches if Outside Height Extreme Width is 14 feet 5 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 5 inches if Outside Height Extreme Width is 14 feet 6 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 2 inches if Outside Height Extreme Width is 14 feet 7 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 10 inches if Outside Height Extreme Width is 14 feet 8 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 6 inches if Outside Height Extreme Width is 14 feet 9 inches

# **Umler**®

## **Data Specification Manual**

- -Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 3 inches if Outside Height Extreme Width is 14 feet 10 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 11 inches if Outside Height Extreme Width is 14 feet 11 inches
- Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 6 inches if Outside Height Extreme Width is 15 feet 0 inches
- Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 4 inches if Outside Height Extreme Width is 15 feet 1 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 8 inches if Outside Height Extreme Width is 14 feet 3 inches or less
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 7 inches if Outside Height Extreme Width is 14 feet 4 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 5 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 4 inches if Outside Height Extreme Width is 14 feet 6 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 7 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 8 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 9 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 9 feet 9 inches if Outside Height Extreme Width is 14 feet 10 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 9 feet 5 inches if Outside Height Extreme Width is 14 feet 11 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 9 feet 2 inches if Outside Height Extreme Width is 15 feet 0 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 8 feet 10 inches if Outside Height Extreme Width is 15 feet 1 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 8 feet 6 inches if Outside Height Extreme Width is 15 feet 2 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 8 feet 3 inches if Outside Height Extreme Width is 15 feet 3 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 11 inches if Outside Height Extreme Width is 15 feet 4 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 8 inches if Outside Height Extreme Width is 15 feet 5 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 4 inches if Outside Height Extreme Width is 15 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 8 inches if Outside Height Extreme Width is 15 feet 2 inches or less
- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 6 inches if Outside Height Extreme Width is 15 feet 3 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 3 inches if Outside Height Extreme Width is 15 feet 4 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 9 feet 6 inches if Outside Height Extreme Width is 15 feet 5 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 8 feet 8 inches if Outside Height Extreme Width is 15 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 7 feet 11 inches if Outside Height Extreme Width is 15 feet 7 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 7 feet 1 inches if Outside Height Extreme Width is 15 feet 8 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 6 feet 3 inches if Outside Height Extreme Width is 15 feet 9 inches
- Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 8 inches if Outside Height Extreme Width is 16 feet 3 inches or less
- Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 7 inches if Outside Height Extreme Width is between 16 feet 4 inches and 16 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 6 inches if Outside Height Extreme Width is 16 feet 7 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 3 inches if Outside Height Extreme Width is 16 feet 8 inches
- Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 0 inches if Outside Height Extreme Width is 16 feet 9 inches

- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 8 inches if Outside Height Extreme Width is 16 feet 10 inches
- Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 5 inches if Outside Height Extreme Width is 16 feet 11inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 2 inches if Outside Height Extreme Width is 17 feet 0 inches
- Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 8 inches if Outside Height Extreme Width (A187) is 16 feet 9 inches or less
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 6 inches if Outside Height Extreme Width (A187) is 16 feet 10 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 4 inches if Outside Height Extreme Width (A187) is 16 feet 11 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 2 inches if Outside Height Extreme Width (A187) is 17 feet 0 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 9 feet 11 inches if Outside Height Extreme Width (A187) is 17 feet 1 inch

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

#### **Inside Length Mandatory**

Δ135

The inside length of the equipment from end to end inside walls, linings, and permanent bulkheads

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A135

Minimum	Maximum
20 ft 0 inches	99 ft 3 inches

#### Validation Rule for A135

 -Inside Length/Inside Platform Length must be less than or equal to Outside Length (OSLG)

### NOTES:

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the shortest dimension of a unit in the set.

#### Inside Width

A138

The inside width of the equipment from side walls and linings

Displayed in feet and inches on the Web. Stored in inches.

## Range of Values for A138

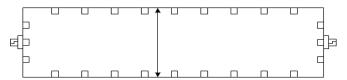

Minimum	Maximum
4 ft 0 inches	12 ft 6 inches

#### Validation Rule for A138

-Inside Width/Inside Platform Width must not exceed Outside Extreme Width

#### NOTES:

- For connected unit cars report the shortest dimension of a unit in the set.
- For the inside width of multi-level (FA) flat cars report the most restrictive deck width. Articulated (FA) flat cars report the most restrictive deck width for single unit of the consist. If articulated and the platforms are different widths, report the most restrictive width dimension.

#### **Truck Center Length**

A276

The length between the centers of the two truck systems

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

# Range of Values for A276

Minimum	Maximum
15 ft 0 inches	76 ft 11 inches

Validation Rule for A276

- -Truck Center Length is required for cars with an Outside Length of greater than 62 feet 6 inches
- -Truck Center Length must be a minimum of 15 feet for cars with an Outside Length greater than 62 feet 6 inches

#### NOTES:

• For connected unit cars report the dimension of the largest unit in the set.

Inset Stake Pkts Plat Len	A131
Inset Stake Pockets - Platform Length-Describes the length of platform	n in inches

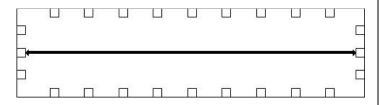

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A131

Minimum	Maximum
20 ft 0 inches	99 ft 11 inches

#### NOTES:

• Measurement between stake pockets:

Inset	Stake	<b>Pkts</b>	Plat	Wdt	
-------	-------	-------------	------	-----	--

A132

#### Describes the width of platform in inches

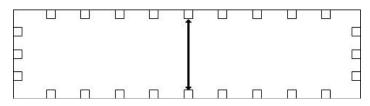

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A132

Minimum	Maximum
4 ft 0 inches	11 ft 6 inches

#### NOTES:

• Measurement between stake pockets:

# Platform Hght Above Rail Mandatory

A192

#### Describes the platform height above the rail in inches

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A192

Minimum	Maximum
2 ft 0 inches	8 ft 10 inches

#### Validation Rule for A192

- -Flat Cars (UMMD = FM, FMS, FB, FBS, FL, or FBC) must be less than or equal Platform Height Above Rail of 5 feet 11 inches
- -Platform Height cannot be greater than Outside Height

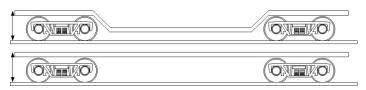

#### NOTES:

EXCEPTIONS: For bi-level and tri-level flat cars, measurement is from top of rail to top of floor of lower deck. Feet in Pos. 45-46, inches in Pos. 47-48. Round fraction to the higher inch, e.g., 05 1/4" = 06". This field must agree relationally for V\_\_\_ Equipment Type Codes and P\_\_\_.

P	MINIMUM—1ft 1in MAXIMUM—4ft	
	9in	
Q	MINIMUM—10in MAXIMUM—4ft	
S	MINIMUM—10in MAXIMUM—4ft	
All F except F_3_ and F_6_	MINIMUM—2ft MAXIMUM—5ft 11in	
All F_3_, F_6_ and F_9_	MINIMUM—2ft MAXIMUM—8ft 11in	

Q8	MINIMUM—2ft 6in MAXIMUM—5ft
P1, P2, P5, P6	MINIMUM—2ft MAXIMUM—3ft 3in
P3, P4, P7, P8	MINIMUM—3ft 4in MAXIMUM—5ft
	11in
P9	MINIMUM—3ft 2in MAXIMUM—3ft
	2in
Q_1_	MINIMUM—2ft MAXIMUM—2ft 8in

- See diagram below for place of measurement on depressed cars (Equipment Type Code F\_3\_, F\_9) and well cars (Equipment Type Code F\_6\_).
- Side view of car.

#### **Height of Platform**

Describes the height of the lowest point of the platform above the rail in inches

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for B239

Minimum	Maximum	
0 ft 6 inches	5 ft 11 inches	

#### Validation Rule for B239

-Height of Depressed Platform above Rail can only be reported for cars with Mechanical Designations of FD, FDC, or FW

#### NOTES:

· Side view of car.

# **Bulkhead Top Width**

## Describes the width of the bulkhead

Displayed in feet and inches on the Web. Stored in inches.

## Range of Values for B038

Minimum	Maximum
2 ft 1 inches	11 ft 7 inches

#### Validation Rule for B038

- -Bulkhead Top Width requires Bulkheads on cars
- -Cars with Plate Codes of B, C, E, F, H, or I can only report a maximum Bulkhead Top Width of 10 feet 8 inches
- -Bulkhead Top Width with Plate Code B, E, F, or H must have a Bulkhead Top Width greater than or equal 6 feet
- -Bulkhead Top Width must be reported for Mechanical Designations (UMMD) FB, FBC, FBS, FDC, or LP

#### **Bulkhd Height Abov Pltfrm**

B035

Describes the height of the bulkhead

Displayed in feet and inches on the Web. Stored in inches.

## Range of Values for B035

Minimum	Maximum
3 ft 0 inches	16 ft 3 inches

### Validation Rule for B035

-Bulkhead Height Above Platform must be reported for Mechanical Designations (UMMD) FB, FBC, FBS, FDC, or LP

Depressed/Well Bot Width	B066
Describes the platform width at the lowest point	

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for B066

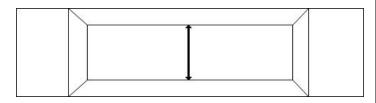

Minimum	Maximum
3 ft 10 inches	10 ft 10 inches

#### Validation Rule for B066

- -Depressed or Well Flat Bottom Width used only for Mechanical Designation of FD, FDC, or FW
- -Depressed or Well Flat Bottom Length can only be reported for cars with Mechanical Designation of FD, FDC, or FW

#### NOTES:

• Measurement at top of depression/well:

١	Depressed/Well Bot Length	B065
ı	Well Or Depressed FlatBottom Length	

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for B065

Minimum	Maximum
7 ft 6 inches	56 ft 10 inches

#### NOTES:

Measurement at bottom of depression/well:

Depressed/Well Top Width	B068
Well Or Depressed FlatTop Width	

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for B068

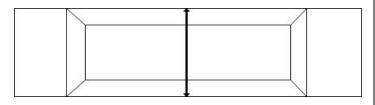

Minimum	Maximum
3 ft 7 inches	11 ft 10 inches

## Validation Rule for B068

-Depressed or Well Flat Top Width can only be reported for cars with Mechanical Designation of FD, FDC, or FW

#### NOTES:

• Measurement at top view of depression/well:

Depressed/Well Top Length	B067
Well Or Depressed FlatTop Length	

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for B067

Minimum	Maximum
14 ft 0 inches	61 ft 10 inches

Validation Rule for B067

-Depressed or Well Flat Top Length can only be reported for cars with Mechanical Designation of FD, FDC, or FW

#### NOTES:

Measurement at top view of depression/well:

Mid-ordinate Offset (MOO)		A167
Mid-Ordinate Offset (MOO)		
Range of Values for A167		
Minimum	Maximum	
0	9.9990000000000006	

## Validation Rule for A167

- -Mid-Ordinate Offset (MOO) can only be reported for Mechanical Designations of (LS, FD, FW, FM, and FMS) with GRL greater than or equal 200,000 pounds and axle count greater than or equal 6
- -Mid-Ordinate Offset (MOO) can only be reported for Flat Cars having an axle count equal to or greater than 6

End-Swing Offset (ESO)	A084
End-Swing Offset (ESO)	
Range of Values for A084	

# Minimum Maximum 0 9.999000000000000

#### Validation Rule for A084

- -End-Swing Offset (ESO) can only be reported for Mechanical Designation of (LS, FD, FW, FMS, and FM) with GRL greater than or equal 200,000 pounds and axle count greater than or equal 6
- -End-Swing Offset (ESO) is only applicable to Flat Cars having GRL of 200,000 pounds or greater
- -End-Swing Offset (ESO) is only applicable to Flat Cars having an axle count equal to or greater than 6

# Perm Cont Platform Height B052 Bulkhead Or Container - Hgt. Above Plat. Well Or Depressed Flat - Height Of Platform

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for B052

Minimum	Maximum
3 ft 0 inches	17 ft 6 inches

#### Validation Rule for B052

- -Bulkhead Height Above Platform and Height of Depressed Platform above Rail are mutually exclusive, either one or the other can be reported but not both
- -Permanent Container Top Height Above Platform can only be reported on car having Permanent Containers
- -Permanent Container Top Height Above Platform can only be set for cars that have Permanent Containers

# Permanent Cont Top Width B056 Bulkhead Or Container - Top Width

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for B056

iviinimum	iviaximum
6 ft 0 inches	99 ft 6 inches

#### Validation Rule for B056

- -Permanent Container Top Width can only be set for cars with a permanently mounted container (B054)
- -Permanent Container Top Width with Plate Code B, C, E, F, H, or I must be less than or equal 10 feet 8 inches

-Permanent Container Top Width with Plate Code B, E, or F must be greater than or equal 6 feet

# **Specification**

Truck Count B256

#### The total number of trucks on the equipment

System Generated Field. This element is not eligible for Input.

#### Range of Values for B256

Minimum	Maximum
2	18

**Axle Count Mandatory** 

A024

The total number of axles on the equipment

#### Affects Rating.

#### Range of Values for A024

Minimum	Maximum
4	36

#### Validation Rule for A024

- -Axle Count must be greater than or equal to 4
- -Axle Count for an articulated car must be greater than or equal to ((Connected Unit Count (A020) x 2) + 2)
- -Axle Count for a draw bar connected car must be greater than or equal to (Connected Unit Count (A020) x 4)
- -Total Axle Count must match sum of truck axle counts

#### Wheel Bearing Type Mandatory

B191

Indicates the wheel bearing journal design for the equipment

Affects Rating

## Permissible Values for B191

P Plain R Roller

#### Validation Rule for B191

- -Cars with Plain Bearings will have a Transportation Code (TCOD) and Transportation Condition Code (TCCD) of either YA, S, SX, or XJ
- -Equipment cannot have Plain Bearings if Built Date (BLDT) is on or after January 1, 1993  $\,$

## **Bearing Shielded From HBD**

B021

### Indicates the wheel bearings are shielded from wayside hot box detectors

#### Permissible Values for B021

Y Yes

# Brake Shoe Type Mandatory

B026

### Indicates the type of brake shoe on the equipment

#### Permissible Values for B026

- C Tread Conditioning
- H High Friction Composite
- L Low Friction Composite/Cast Iron

#### **CC Side Bearing Type**

A146

Indicates the travel range of the constant contact side bearings installed on the equipment

#### Permissible Values for A146

- LC Long Travel Constant Contact
- SC Short Travel Constant Contact

#### Validation Rule for A146

 -Equipment having Qualification for Increased Gross Rail Load (B344) of 1 must have Constant Contact Side Bearing Type of LC

#### NOTES:

 For Mechanical Designation (UMMD) FB, FBC, FBS, Constant Contact Side Bearing Type is mandatory. If not reported, Mechanical Restriction "X" and Mechanical Restriction Reason "N" will be applied to car

#### **Empty/Load Device Eqpd**

B075

Indicates that the air brake system includes a device to determine if the equipment is empty or loaded, and then varies the braking forces accordingly

#### Permissible Values for B075

Y Yes

#### **Center of Gravity Empty**

A045

When empty, indicates the height from Top of Rail to the Center of Gravity

#### Affects Rating.

#### Range of Values for A045

Minimum	Maximum
22	63

#### Validation Rule for A045

- All cars that exceed Plate Code (A046) C must report Center of Gravity Empty except for cars with Equipment Type Code (UMET) of J\_\_\_
- All Flat Cars with an Equipment Type Code (UMET) of F\_ \_ must report Center of Gravity Empty

#### **Remote Monitoring Device**

B176

**B006** 

Indicates the equipment has a device that transmits a signal or records data

#### Permissible Values for B176

Y Yes

# N No

AEI High Temperature Tag

Indicates the equipment is equipped with a high temperature AEI tag

## Permissible Values for B006

Y High Temperature Tag

# Floor Cradle/Trough Eqpd

A103

Indicates the equipment has a floor cradle or trough

# Permissible Values for A103

Y Yes

## Validation Rule for A103

 -If Dedicated Service Type (B346) is set to Coiled Steel then Floor Cradle/Trough must be reported

## Non-Fish Belly

B136

Indicates that the center sill does not have an increased section depth between the two trucks

#### Permissible Values for B136

Y Yes

#### Validation Rule for B136

 -Non-Fish Belly is only applicable to cars with Flat Mechanical Designation of FM, FMS, FB, FBC, or FBS

# Connected Unit Count

A020

Indicates the number of units within an articulated or multi-unit equipment

# Affects Rating.

# Range of Values for A020

IVIIIIIIIIIIII	IVIAXIIIIUIII
2	9

### Validation Rule for A020

- -Connected Unit Count must equal the number of Unit Segments
- -Unit Segment Component elements must not be reported if the Connected Unit Count is not reported
- -Unit Segment Component elements must be reported if Connected Unit Count is reported

#### **Intermediate Conn Style**

B115

Indicates the method by which two or more pieces of equipment are connected  $% \left( 1\right) =\left( 1\right) \left( 1\right$ 

## Umler

#### **Data Specification Manual**

#### Permissible Values for B115

- **Articulated Connector**
- D **Drawbar Connector**

#### Validation Rule for B115

- -Intermediate Connector Style is required for multi-unit equipment
- -Intermediate Connector Style must not be reported for single unit equipment

#### **Operating Brakes Mandatory**

A182

The number of air brake control valves on the equipment (excludes hand brakes). One control valve consists of a service portion, emergency portion, and pipe bracket. Example: DB-60 control valve

#### Permissible Values for A182

1	2	3	4	5
6	7	8	9	

#### Validation Rule for A182

- -Operating Brakes can only be reported for articulated equipment
- -Operating Brakes are required for articulated equipment
- -Operating Brakes are required for Heavy Capacity Flat Cars (Mechanical Designation of FD, FM, FMS, FW, or LS) with 6 Unit Axles or More
- -Operating Brakes (A182) must be 1 for non-articulated equipment with an Axle Count (A024) equal to 4

#### NOTES:

• Excludes empty/load device, number 8 vent valve, and proportion valve.

#### **ECP Brake Type** R327

Indicates the type of electronic controlled pneumatic brake used on the equipment

#### Permissible Values for B327

- Not Equipped
- Overlay Both ECP & Air Brake 0
- Stand Alone ECP Only

#### Validation Rule for B327

-Equipment must have a value entered for ECP Brake Type if built or rebuilt after June 28, 2012

#### **ECP Brake Builder**

**B328** 

The manufacturer of the electronic controlled pneumatic brake used on the equipment

#### Permissible Values for B328

NYAB New York Air Brake

WABT WABTEC

#### **Validation Rule for B328**

- -If ECP Brake Type (B327) is Stand Alone or Overlay then a value must be entered for ECP Brake Builder
- -If ECP Brake Type (B327) is Not Equipped then ECP Brake Builder is not reportable

#### Slack Adjuster Group

The slack adjuster group on the equipment per AAR Field Manual Rule #8

#### Value does not carry forward for Single Clone / Multi-Clone. Permissible Values for B538

	ISSIDIC VUIGC	3 101 1	5550				
Α	Group A	В	Group B	С	Group C	D	Group D
Ε	Group E	F	Group F	G	Group G	Н	Group H
J	Group J	L	Group L	M	Group M	Ν	Group N
0	Group O	Р	Group P	Q	Group Q	R	Group R
1	Internal	2	Unequipped				

### Validation Rule for B538

- Slack Adjuster Group is mandatory for all equipment built or rebuilt on or after January 1, 2016
- If Slack Adjuster Group is reported as "1" then Brake Cylinder Mount Type (B540) must be reported as "T"
- If Slack Adjuster Group is "1" or "2", then Slack Adjuster CID (B359) must not be reported.

#### NOTES:

• Permissible value of "1 – Internal" identifies special truck mounted internal slack adjuster within brake cylinder.

#### **Brake Cylinder Mount Type**

B540

Identifies the location of the brake cylinder

#### Permissible Values for B540

**Body Mounted** 

Truck Mounted

#### Validation Rule for B540

- Brake Cylinder Mount Type is mandatory for all equipment built or rebuilt on or after January 1, 2016

#### **Equipment Builder**

ACF

Δ035

Identifies the original manufacturer of the equipment

American Car & Foundry

#### Permissible Values for A035

,	/ interredit car a roundry

### Validation Rule for A035

- -Equipment Builder must be populated if the Built Date (BLDT) is July 1, 2010 or newer
- -Equipment built or rebuilt on or after July 1, 2010 cannot have a Equipment Builder of Unknown
- -Equipment with a Built Date (BLDT) on or after July 1, 2010 cannot have an Equipment Builder of OWNER RAILROAD.

-Equipment Builder can have a value of MULT only if the equipment has multiple units.

Builder Lot Code B030

A unique identifier for a group of equipment built by one manufacturer under the same builder specification

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for B030

 Equipment built or rebuilt on or after June 28, 2012 must have a value for Builder Lot Code

Built Country B031

The country where the equipment was constructed

Data is Confidential.

#### Permissible Values for B031

CA Canada MX Mexico

US United States

Rebuilt Country B170

The country where the equipment was re-constructed

#### Permissible Values for B170

CA Canada MX Mexico

US United States

FRA Reflectorization B096

Indicates the equipment owner assumes responsibility for applying reflectorization tape

#### Permissible Values for B096

- P Reflectorization Plan
- W Reflectorization Waiver

#### Validation Rule for B096

-Reflectorization is mandatory for all equipment after November 28, 2015.

Air Hose Arrangement B524

The type of trainline air hose arrangement

#### Permissible Values for B524

- S-424 Angle Cock Location
- B S-425 Angle Cock Location on Cars Equipped with AAR Type F Coupler
- C S-426 Angle Cock Location on Cars with Floating Sills
- S-427 Angle Cock and Air Brake Hose Location on Cars with Excessive
   Overhang Preventing Compliance with AAR Standards
- E S-428 Angle Cock Location on Cars Equipped with AAR Type F Coupler and Cushioned Underframe
- F S-4003 (Former Standard)
- G S-4003x (Former Standard Retrofitted to Meet All Dimensions Except Height)
- H S-4003-05 (Current Standard Train Line Arrangement for Cars with F-Shank Couplers)
- S-4021 Angle Cock and Brake Hose Location on Cars with EOCC (E and F)
- J S-4021 Coupler Mounted Bracket End Arrangement
- K S-4028 Train Line Arrangement with Displaceable Union on Cars with EOCC and Couplers Not Exceeding 45 in. in Length
- L S-4029 Train Line Arrangement with Displaceable Union on Cars with EOCC and Couplers Exceeding 45 in. in Length
- M S-4030 Trolley Arrangement on Cars with EOCC and E-Shank Couplers

#### Validation Rule for B524

-Air Hose Arrangement must be reported for this equipment if it is Built or Rebuilt on or after April 22, 2014.

#### NOTES:

- If any of the following conditions apply, Air Hose Arrangement (B524) must be reported for cars Built or Rebuilt on or after April 22, 2014:
  - ° Draft Gear Type (B073) at any location is C or E.
  - ° Connected Unit Count (A020) is reported.
  - ° Outside Length (OSLG) is greater than or equal to 70 feet (840 inches).

- The overhang is greater than 5 feet 6 inches (66 inches). Overhang is calculated as follows:
- 0.5 \* (Outside Length, in inches, minus Truck Center Length, in inches, minus 31 inches)
  - For all other equipment, reporting Air Hose Arrangement is optional.
  - .

4-Pressure ABT Receiver Eqpd

B539

Identifies if the equipment is equipped with a 4-pressure air brake test receiver

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B539

E EquippedN Not Equipped

#### NOTES:

 An "E" will be system generated if a 4-Pressure ABT is reported on the equipment.

### **Feature**

Floor Material A104

Describes the type of construction material used for the equipment floor

#### Permissible Values for A104

- 05 Composite Nailable (considered same as wood
- 06 Composite Nailable, Reinforced (considered same as wood)
- 14 Other
- 19 Standard Steel
- 21 Steel Floor, (straight deck) without risers (F-8-)
- 22 Steel Floor, permanently mounted steel risers (F-8-)
- 23 Steel Nailable (includes alternate wood and steel floor
- 24 Steel Nailable, Reinforced (includes alternate wood and steel floor
- 25 Standard Steel, Reinforced
- 27 Unknown (Flats only)
- 30 Wood
- 33 Wood, Double, Reinforced
- 34 Wood Floor with Steel Protective Plates (includes perforated steel)
- 35 Wood Floor, Reinforced, with Steel Protective Plates (includes perforated steel)
- 36 Wood Floor, Reinforced

#### Validation Rule for A104

- -Floor Material for Center Beam Flats with Mechanical Designation (UMMD) of (FBC or FDC) must be options 21 (Steel), 22 (Steel w/ Risers), 25 (Steel Reinforced), 27 (Undetermined), 30 (Wood).
- -Equipment built or rebuilt on or after June 15, 2023 cannot report a value of Other or Unknown

#### NOTES:

 If Mechanical Designation (UMMD) is FBC and Floor material is 22 (Steel w/Risers), Steel Riser Equipped (B200) in not reportable.

**Bulkhead Type** 

B034

Identifies the type of bulkhead attached to the equipment

#### Permissible Values for B034

Fixed

M Moveable

### Validation Rule for B034

- -Bulkhead Type can only be reported on Flat cars with Mechanical Designations (UMMD) of FL, FB, or FBS
- -Bulkhead Type on a Flat car with Mechanical Designation (UMMD) of FL can only be reported as Fixed

**Canopy Equipped** 

**B266** 

Car is equipped with large, permanent rigid cover with end doors, suitable for transporting large airplane and other components

Permissible Values for B266

Y Yes

Validation Rule for B266

=Mandatory

## **Umler**<sup>®</sup>

#### **Data Specification Manual**

-Canopy Equipped	can only	be reported	on Flat car	r with M	1echanica
Designations	(UMMD)	of FBS or FM	IS		

-If Dedicated Service Type (B346) is set to Airplane Wings/Fuselage then Canopy Equipped must be set to Y

Interior Rack B114
Indicates the equipment is interior rack equipped

## Permissible Values for B114

V Vo

Lading Strap Anchor Eqpd

**B121** 

Indicates the equipment has fixed devices or design features which provide connection points for straps or bands securing the lading

#### Permissible Values for B121

Y Yes

**Chains and Binders Eqpd** 

**B267** 

Car is equipped with attached chains and binders for load securement

#### Permissible Values for B267

Y Yes

#### Validation Rule for B267

-Chains and Binders Equipped can only be reported on Flat cars with Mechanical Designation (UMMD) of (FB, FC, FMS, FBS, FBC, or FL)

Tie Down Non Nylon Web

B271

### Identifies equipment having a non nylon web securement

Permissible Values for B271

Y Yes

#### Validation Rule for B271

 -Non Nylon Web Securement is only applicable to cars with Flat Mechanical Designation (UMMD) of FB, FBC, FBS, FD, FDC, FL, FM, FMS, FW, or LP

Tie-Down Strap Equipped B282

Identifies equipment having securment straps

### Permissible Values for B282

Y Yes

#### Validation Rule for B282

 -Tie Down Strap Equipped is only applicable to cars with Flat Mechanical Designations of (FDC, FBC, FL, FM, or FMS)

**Spring Tensioning Device** 

B198

Identifies equipment with permanent securement method of spring anchored tie downs

#### Permissible Values for B198

Yes

### Validation Rule for B198

-Spring Tensioning Devices (B198) are only applicable to cars with Flat Mechanical Designation of (FB, FBC, FBS, or FMS)

Steel Riser Equipped

B200

Equipment has steel risers mounted on the flat deck of the unit to support the load

#### Permissible Values for B200

Y Yes

#### Validation Rule for B200

-Steel Riser Equipped (B200) is only applicable to Flat cars with Mechanical Designations (UMMD) of (FB, FBS, FMS, MW, MWG, or MWRC).

#### NOTES:

 If Mechanical Designation (UMMD) is FBC and Steel Risers are present, then report Floor material (A104) as 22 (Steel floor, permanently mounted steel risers).

**Blocking Timbers Equipped** 

B270

= Affects Rating

Identifies equipment with blocking timbers

#### Permissible Values for B270

Y Yes

#### Validation Rule for B270

 Blocking Timbers Equipped can only be reported on Flat cars with the Mechanical Designation of FMS

**Stake Pocket Locations** 

B190

The locations of pockets for the installation of temporary vertical side stakes used to confine the lading

#### Permissible Values for B190

- C Center
- S Side/End
- B Both

Side/End

and Center

#### Validation Rule for B190:

 All Flat Cars built after January 1, 2002 with Mechanical Designation (UMMD) of FM with 4 axles must report Stake Pocket Locations of S or B. (Per Field Manual Rule 88, A, 15, b, (2))

**Permanent Container** 

B054

Identifies that the equipment has a permanently attached container

#### Permissible Values for B054

Y Yes

#### Validation Rule for B054

-Height of Depressed Platform above Rail can only be reported on cars with no Permanent Container

**Permanent Cont Material** 

A055

The material of which the container is made

#### Permissible Values for A055

01 Aluminum

19 Standard Steel

#### Validation Rule for A055

 Permanent Container Material can only be reported if Permanent Container (B054) is Y

**Chain Equipped** 

B402

Identifies the flat car is equipped with chain tie downs

## Value does not carry forward for Equipment Group Change. Permissible Values for B402

Y Yes

Cost

Original Cost

A184

The original manufacturer selling price

Data is Confidential. Value does not carry forward for Single Clone / MultiClone.

Range of Values for A184

 Minimum
 Maximum

 0
 9999999

### Validation Rule for A184

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported.
- -Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost

andatany A - Usad in FTC Concretion

\*=Conditionally Mandatory

 -Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

#### NOTES:

- Original Cost is never altered. It is the cost of the equipment to the original owner.
- For railroad-marked cars, report in US dollars the original ledger value of the original owner. For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24
- The original cost is used in the settlement of AAR Interchange Rule 107 Office Manual.
- For connected unit cars report the total original cost for all units in the set.
- Numeric, applicable to all railroad-marked cars Also, applicable to privately marked covered hopper (LO) cars.
- Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

Ledger Value	A150
The sum of original cost and additions & betterments	

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A150

Minimum	Maximum		
0	999999		

#### Validation Rule for A150

- Original Cost must be equal to the Ledger Value if there are no Additions
   & Betterments.
- -Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

Total A&B A003

System generated sum of all reported amounts in A&B Amount (A317), in US dollars

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A003

Minimum	Maximum		
0	99999999		

### NOTES:

- For railroad-marked cars, report the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not be used to report Ledger Value.
- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.
  - Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
- Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.
- For connected unit cars report the total Truck Location A for all units in the
   sot

Ind for Pos/Neg Total A&B	Δ128

A code indicating the positive or negative adjustment to the original cost of the

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A128

N Negative P Positive

A&B Pos/Neg Ind A316

A code indicating the positive or negative adjustment to the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A316

N Negative P Positive

#### Validation Rule for A316

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -The A&B Indicator is required when Additions & Betterments are reported.
- -The A&B Indicator must not be reported if Additions & Betterments are not reported.

A&B Amount A317

The amount of the individual addition and betterment added to or subtracted from the original cost of the equipment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A317

Minimum	Maximum	
1	999999	

#### Validation Rule for A317

-When entering an individual addition & betterment; A&B Date Done (A319), A&B Type (A318), A&B Pos/Neg Ind (A316), and A&B Amount (A317) must be reported

A&B Date Done A319

#### The date of the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A319

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for A319

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -Addition and Betterment Date Done cannot be earlier than Built Date
- -Additions & Betterments Date Done cannot be later than today's date.

A&B Type A318

The type of individual addition and betterment as defined by Rule 107

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A318

FLLD Other permanently installed loading equipment used on flat cars

GNRL General - Capitalized Additions and Betterments

INIT Initial load of historical A&B amount as of Umler 4.6 implementation

date

#### Validation Rule for A318

- -For each equipment, only one Individual A&B Type can have a value of INIT.
- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.

### Car Management

Pool Number P001

Unique number used to indicate the grouping of equipment for a particular purpose

Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add Back.

## **Umler**®

#### **Data Specification Manual**

Pool Control TCPC

**Pool Control** 

System Generated Field. Used for Transportation Codes. This element is not eligible for Input, Output or Query.

#### NOTES:

• For further explanation reference Appendices C and E.

User Routing Instructions TCUR

The routing instruction reported by the user

#### Used for Transportation Codes.

#### Permissible Values for TCUR

- 2 Trailer Service Rule 2
- G Contaminated commodity service
- M Mark canceled
- O Owner requested return
- U Unassigned equipment

#### NOTES:

• For further explanation reference Appendix E.

**Umler Transportation Code** 

**TCOD** 

The type of assigned service, empty routing or restriction of the equipment

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

Transportation Cond Code

TCCD

The AAR or FRA interchange restriction code

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

Mechanical Restriction TCME

User reported or system generated type of mechanical restriction

Used for Transportation Codes.

#### **Permissible Values for TCME**

- S Scrap
- X AAR Interchange Restriction
- Y FRA Interchange Prohibited

### NOTES:

For further explanation reference Appendix D.1

Mech Restriction Reason TCMR

The explanation of the Mechanical Restriction (TCME)

Used for Transportation Codes.

#### Permissible Values for TCMR

- A Restricted Due to Age (Over 40-AAR, Over 50-FRA)
- B Restricted Due to Air Brakes
- C Restricted Due to Axles
- D Restricted Due to Couplers and Couplers Parts
- F Restricted Due to Couplers Yokes
- G Restricted Due to Draft Gears
- J Restricted Due to Journal Bearing and Journal Lubrication
- N Restricted Due to Trucks
- P Restricted Due to Truck Side Frames
- T Restricted Due to Trucks Bolsters
- U Restricted by AAR or Owner
- W Restricted Due to Wheels
- X Restricted Due to Scrap or Early Warning
- Z Restricted Due to Umler Conflict (Not Valid for User Input)

### NOTES:

• For further explanation reference Appendix D.2.

The assignment of the Transportation Codes S\_, SX, XA, XZ and YA generate
the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and
mileage rate.

Loading Authority Fleet Status B597

Identifies when a car is listed on a fleet in the Loading Authority application

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B597

Y Yes

S Suspended

#### NOTES:

- When equipment is on a fleet the Loading Authority (LA) application will update the flag to 'Y – Yes'. When equipment is removed from a fleet the LA application will remove the 'Y – Yes'.
- When equipment is on a LA fleet that is suspended the LA application will update the flag to 'S Suspended'. When the equipment is on a LA fleet that is no longer suspended the LA application will update the flag to 'Y Yes'.

Sys Gen Routing Inst TCGR

The routing instruction generated by the system

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES

• For further explanation reference Appendix E.5.

	rai		-12	VAI		_
		 - A	-	1 III I	•	_

Restricted Speed Empty B180

Describes the maximum restricted speed the equipment can travel when empty

Range of Values for B180			
Minimum	Maximum		
5	95		

Restricted Speed Loaded B181
Describes the maximum restricted speed the equipment can travel when loaded

Range of Values for B181
Minimum Maximum

5 | 95 Shove Car to Rest

Identifies the car must be moved to rest by locomotive

Permissible Values for B189

Y Yes

Shove Adj. Car to Rest

Identifies the adjacent car must be shoved to rest by locomotive

Permissible Values for B188

′ Ye

Train Position Sensitive B211

Indicates there is a physical reason, limiting its position on a train Permissible Values for B211

Y Yes

**End of Train Only** 

B277

B189

Indicates the equipment must be placed at the end of the train (including per AAR RP-2001)Permissible Values for B277

Y Yes

**Check Trailing Tonnage** 

B044

## **Umler**

#### **Data Specification Manual**

#### Indicates the equipment has restrictions on trailing tonnage

#### Permissible Values for B044

Yes

Curve Negotiate Exception	B178
Describes the requirement for negotiating a curve	

#### Permissible Values for B178

- Restrictive Curve Negotiability, Section 2.1.4 of M-1001
- В Does not meet all Chapter XI Curving Requirements

Cooper Rating Exception	B273
Describes the cooper rating (weight distribution model of the equipment	), for
use in movement across bridges	

#### Permissible Values for B273

- **Excessive Cooper Rating** Α
- В Cooper Rating in Excess of E66

Clearance Exception	B275
Describes equipment containing nonstandard dimension	

#### Permissible Values for B275

- Excessive Outside Extreme Height (A185)
- В Excessive Outside Extreme Width (A186)
- C Lower Guides for Loading High Cube Containers
- D All other unique clearance issues

#### **Loaded Net Braking Ratio**

B551

Indicates calculated minimum loaded net braking ratio per AAR Specifications in place on built or rebuilt date (in percent).

System Generated Field. This element is not eligible for input.

#### Permissible Values for B551

- 11.0
- -8.5

### NOTES:

- · Loaded Net Braking Ratio is determined as follows:
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Loaded Net Braking Ratio will be set to blank.
  - If Built Date (BLDT) is greater than or equal to 1/1/1972 and less than 1/1/2004, than loaded Net Braking Ratio is 8.5%.
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is greater than or equal to 1/1/2004, then Loaded Net Braking Ratio is 11.0%.

Owner-Provided Loaded Net Braking Ratio	B552
Indicates an alternate minimum loaded net braking ratio provided by	owner (in
percent).	

#### Range of Values for B552 Minimum Maximum 8.5 14.0

#### NOTES:

- Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net Braking Ratio (B551).
- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - Rebuilt Date (RBDT)
  - o Gross Rail Load/Weight (A266)
  - o Equipment Type Code (UMET)
  - o Empty/Load Device Eqpd (B075)

#### **Empty Braking Ratio**

**B553** 

Indicates calculated empty braking ratio per AAR Specifications in place on built or rebuilt date (in percent).

System Generated Field. This element is not eligible for input.

#### Range of Values for B553 Minimum Maximum 15.0 38.0

#### NOTES:

- Empty Braking Ratio is determined as follows:
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Empty Braking Ratio will be set to blank.

Owner-Provided Empty Braking Ratio	B554
Indicates an owner supplied alternate empty braking ratio (in percent).	

Range	of	Val	ues	for	B554
B.4::			- 1 -		

Minimum	Maximum
15.0	38.0

#### NOTES:

- Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net Braking Ratio (B551).
- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - o Rebuilt Date (RBDT)
  - o Gross Rail Load/Weight (A266)
  - o Equipment Type Code (UMET)
  - o Empty/Load Device Eqpd (B075)

### Truck Components

**Axle Spacing Distance Mandatory** 

B020

The distance between adjacent axle centers within the same truck system

Affects Rating

#### Permissible Values for B020

- 53 Inches 53
- 54 54 Inches
- 60 60 Inches
- 61 61 Inches 62 62 Inches
- 63 63 Inches
- 64 64 Inches
- 65 65 Inches
- 66 66 Inches
- 68 68 Inches
- 70 70 Inches
- 71 71 Inches
- 72 72 Inches
- 73 73 Inches
- 74 74 Inches
- 76 76 Inches
- 78 78 Inches
- 99 Axle Space Unknown

#### Validation Rule:

- Axle Space Unknown is not a permissible value for equipment with a Built Date (BDLT) on or after January 1, 1980

**Truck Axle Count B252** The number of axles per truck

Range of Values for B252 Minimum Maximum

#### Validation Rule for B252

- Sum of Truck Axle Count must equal Axle Count (A024)

#### Flat Cars A147 Journal Size Mandatory The size of the journal bearing Affects Rating. Permissible Values for A147 3-3/4 X 7 4-1/4 X 8 Α В C 5 X 9 D 5-1/2 X 10 F 6X11 F 6-1/2 X 12 7 X 12 6-1/2X9 7 X 9 G M NOTES: A, B and C Journal Classes are prohibited in Interchange per Rule 90.B.4 4-axle equipment with 28 inch diameter, 1-wear wheels, are limited to a Gross Rail Load (A266) of 195,000 lbs Wheel Diameter Mandatory A294 The diameter of the wheels Permissible Values for A294 28 Inches 33 33 Inches 36 36 Inches 38 38 Inches Validation Rule for A294 -Equipment with a Qualification for Increased Gross Rail Load (B344) of 1 and Journal Size (A147) of G or M must have a Wheel Diameter of 38 -Equipment with Qualification for Increased Rail Load (B344) of 1, and Journal Size (A147) of K, must have a Wheel Diameter of 36 -If Connected Unit Count (A020) is not reported, different Wheel Diameters cannot be reported

## Stability Device Equipped B199

Indicates a stability device is present on the truck

### Affects Rating.

#### Permissible Values for B199

Y Yes

# Bolster Component ID B351 Bolster Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

## Sideframe Component ID B352

#### Side Frame Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

## Wheelset Component ID B350

#### Validation Rule for A057

- -If Rotary Coupler Style is reported, then Coupler Code must be a rotary
- -If Coupler Code is a rotary coupler, then Coupler Style must be R (Rotary).
- -Coupler Code of Type E Obsolete (Rule 16) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type E/F Obsolete (Rule 17) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type F Obsolete (Rule 18) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of FROTARY or EFROTARY cannot be reported for cars Built or Rebuilt on or after August 12, 2014.

#### NOTES:

- Obsolete: All Type D couplers are obsolete and should report code DOBS; cars with this coupler code will be restricted in interchange as discussed
- Unknown: If the coupler code is unknown or if the code stamped on the coupler is illegible, the code BUNK FUNK, EFUNK, or LOCOUNK should be reported.
- Special: Codes ESPEC, FSPEC, and EFSPEC have been created to decline coupler bodies that have been manufactured specifically for the equipment owner and are not listed in the attached table.
- The codes FROTARY and EFROTARY cannot be reported for equipment Built or Rebuilt since August 12, 2014.

#### Permissible Values for B058

В **Bottom Shelf** D **Double Shelf** Р Plain R Rotary

#### **Validation Rule for B058**

- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- -If Draft System Type (B073) is reported as C, E, X, or Y then Inches of Travel (B061) must also be reported

### Used in ETC Generation. Affects Rating.

### Range of Values for B061 Minimum Maximum

Validation Rule for B061

- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- -If Draft System Type (B073) is reported as Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported

Used in ETC Generation. Affects Rating.

#### Permissible Values for B073

- **Cushioning Center of Car** C
- Ε Cushioning End of Car
- Devices with less than 6 inches buff travel approved under AAR Standard Х
- Devices with 6 to 10 inches of buff travel approved under AAR Standard S-060

### Validation Rule for B073

- If Draft System Type (B073) is Standard Draft Gear (S), Inches of Travel (B061) cannot be reported

# **Umler**<sup>6</sup>

### **Data Specification Manual**

- If Draft System Type (B073) is reported as C, E, X, or Y then Inches of Travel (B061) must also be reported
- If Draft System Type (B073) of X, or Y is reported then Draft Gear Group/Cushion Unit Pocket (B562) cannot be reported
- If Draft System Type (B073) X is reported, the Inches of Travel (B061) value must be greater than or equal to 1 and less than 6
- If Draft System Type (B073) Y is reported, the Inches of Travel (B061) value must be greater than or equal to 6 and less than or equal to 10
- If Draft System Type (B073) is S then Draft Gear Group/Cushion Unit Pocket (B562) may only be A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z (AAR Rule 21)
- If Draft System Type (B073) is E then Draft Gear Group/Cushion Unit Pocket (B562) may only be EOC-1,EOC-1D, EOC-1B, EOC-2, EOC-2D, EOC-2B, EOC-3, EOC-3B,EOC-4, EOC-4B, EOC-5, EOC-5D, EOC-5B, EOC-6, EOC-6D, EOC-6B, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-8F, EOC-9, EOC-9B, EOC-9D, EOC-9E, EOC-10, EOC-10D, EOC-10B, EOC-10F, EOC-11, EOC-11D, EOC-11B, EOC-12, EOC-12D, EOC-12B, EOC-13, EOC-13B, EOC-14, EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16, EOC-16D, EOC-16B, EOC-17, EOC-17D, EOC-17B, EOC-18, EOC-18D, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-23, EOC-23B, EOC-24, EOC-24B, EOC-25E, EOC-26B, EOC-26F, or EOC-27D, or EOC-27E (AAR Rule 59)

#### **Draft Gear Group/Cushion Unit Pocket**

B562

Draft Gear Group/Cushion Unit Pocket value as listed in AAR Field Manual Interchange Rule 21 and 59

- Carry forward for Single Clone / Multi-Clone / Restencil / Add-Back / Equipment Group Change.
- Permissible Values for B562EOC-1,EOC-1D, EOC-1B, EOC-2, EOC-2D, EOC-2B, EOC-3, EOC-3B,EOC-4, EOC-4B, EOC-5, EOC-5D, EOC-5B, EOC-6, EOC-6D, EOC 6B, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-8F, EOC-9, EOC-9D, EOC-9E, EOC-9B, EOC-10, EOC-10D, EOC-10B, EOC-10F, EOC-11, EOC-11D, EOC-11B, EOC-12, EOC-12D, EOC-12B, EOC-13, EOC-13B, EOC-14, EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16, EOC-16D, EOC-16B, EOC-17, EOC-17D, EOC-17B, EOC-18, EOC-18D, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-23, EOC-23B, EOC-24, EOC-24B, EOC-25E, EOC-26B, EOC-26F, EOC-27D, EOC-27E, COC-1, COC-2, COC-3, COC-4, COC-5, COC-6, COC-7, COC-8 (AAR Rule 59).

#### A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, Z (AAR Rule 21).

#### Validation Rule(s) for B562

- -Draft Gear Group/Cushion Unit Pocket (B562) is mandatory for equipment built on or after June 13, 2019, unless Draft System Type (B073) is reported as X or Y
- -If Draft Gear Group/Cushion Unit Pocket (B562) is not equal to A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z, then Cushion Unit Type (B563) must be populated
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-6, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-9, EOC-9B, EOC-9D, EOC-10, EOC-10B, EOC-10D, EOC-14, EOC-14B, EOC-18D, EOC-23, EOC-23B, EOC-24, EOC-25E, EOC-26B, or EOC-27D then the Cushion Unit Type (B563) must be 1
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-9E, EOC-26F, or EOC-27E, then the Cushion Unit Type (B563) must be 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-11, EOC-12, EOC-13, EOC-13B, EOC-15, EOC-15B, EOC-15D, EOC-17, EOC-17B, EOC-17D, EOC-18, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-24B, COC-3, COC-5, or COC-7 then the Cushion Unit Type (B563) must be 1 or 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-8F or EOC-10F then the Cushion Unit Type (B563) must be 2 or 3
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-5, EOC-5B, EOC-5D, EOC-6, EOC-6B, EOC-6D EOC-11B, EOC-11D, EOC-12B, EOC-12D,
- or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3
  -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-16D, or COC-1 then the Cushion Unit Type (B563) must be 1, 2, or 4
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D, EOC-3, EOC-3B, EOC-4, EOC-4B, or COC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, or 4
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1, EOC-1B, EOC-1D, or EOC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, 4,
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-8 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or 5
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1D, EOC-2,EOC-2D, EOC-2B, EOC-3, EOC-3B, EOC-5, EOC-5D, EOC-5B, EOC-6D, EOC-7, EOC-7B, EOC-9, EOC-9B, EOC-9D, EOC-11D, EOC-11B, EOC-11B, EOC-9D, EOC-11B, EOC-

- 11D, EOC-12D, EOC-14,EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16D, EOC-17D, EOC-23, EOC-23B, or EOC-27D then the Inches of Travel (B061) must be 10
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-19, EOC-19B, EOC-22, EOC-22B, or EOC-25E then the inches of travel must be 12
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-20 or EOC-20B then the Inches of Travel (B061) must be 14
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1B, EOC-4, EOC-4B, EOC-6, EOC-6B, EOC-8, EOC-8B, EOC-8F, EOC-10, EOC-10B, EOC-10F, EOC-12, EOC-12B, EOC-13, EOC-13B, EOC-17, EOC-17B, EOC-18, EOC-18D, EOC-18B, EOC-21, EOC-21B, EOC-24, or EOC-24B then the Inches of Travel (B061) must be 15
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-2, COC-3, COC-4, COC-5, COC-6, or COC-8 then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 1 or 2, then the Inches of Travel (B061) must be 20
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 4, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 2, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 1, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1 then the Inches of Travel (B061) must be 10, 12, or 15
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-26, then the Inches of Travel (B061) must be 18

Reference AAR Field Manual Interchange Rule(s) 21 and 59.

**Cushion Unit Type** 

B563

Cushion Unit Type value as listed in AAR Field Manual Interchange Rule 21 and

Carry forward for Single Clone / Multi-Clone / Restencil / Add-Back / Equipment Group Change

#### Permissible Values for B563

- 1 Type 1
- 2 Type 2
- 3 Type 3
- 4 Type 4 5 - Type 5
- S Type S

#### Validation Rule(s) for B563

- -Cushion Unit Type (B563) is mandatory for equipment built on or after June
- -If Draft Gear Group/Cushion Unit Pocket (B562) is not equal to A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z, then Cushion Unit Type (B563) must be populated.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-6, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-9, EOC-9B, EOC-9D, EOC-10, EOC-10B, EOC-10D, EOC-14, EOC-14B, EOC-18D, EOC-23, EOC-23B, EOC-24, EOC-25E, or EOC-26B then the Cushion Unit Type (B563) must be 1.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-9E, EOC-26F, or EOC-27E, then the Cushion Unit Type (B563) must be 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-11, EOC-12, EOC-13, EOC-13B, EOC-15, EOC-15B, EOC-15D, EOC-17, EOC-17B, EOC-17D, EOC-18, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-24B, COC-3, COC-5, or COC-7 then the Cushion Unit Type (B563) must be 1 or 2.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-8F or EOC-10F then the Cushion Unit Type (B563) must be 2 or 3.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-5, EOC-5B, EOC-5D, EOC-6, EOC-6B, EOC-6D EOC-11B, EOC-11D, EOC-12B, EOC-12D, or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-16D, or COC-1 then the Cushion Unit Type (B563) must be 1, 2, or 4.

#### -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D, EOC-3, EOC-3B, EOC-4, EOC-4B, or COC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, or 4.

- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1, EOC-1B, EOC-1D, or EOC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, 4,
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-8 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or 5.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 1 or 2, then the Inches of Travel (B061) must
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 4, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 2, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 1, then the Inches of Travel (B061) must be

### **Unit Segment Components**

ľ	Unit Equipment Group	A307
	Describes the equipment type of the platform	

#### Affects Rating

#### Permissible Values for A307

BOXC Box Car FLAT Flat Car HOPP GOND Gondola Hopper **IFLT** Intermodal Flat TANK Tank Car **VFLT** Vehicular Flat

#### Validation Rule for A307

- -Unit Equipment Group cannot be reported if the Connected Unit Count (A020) is not reported
- -Unit Equipment Group must be reported if Connected Unit Count (A020) is reported

Unit Tare Weight	A299
The unit segment weight on rail when empty, sometimes referred	d to as Light
Weight reported in pounds	

#### Range of Values for A299 Minimum Maximum 10000 500000

#### Validation Rule for A299

- -Unit Tare Weight must not be reported if the Connected Unit Count (A020) is not reported
- -Unit Tare Weight must be reported if Connected Unit Count (A020) is
- -Unit Tare Weight for Boxcars must be less than or equal 160,000 lbs.
- -Unit Tare Weight for Refrigerators must be less than or equal 140,000 lbs.
- -Unit Tare Weight for Gondolas must be greater than or equal 30,000 lbs.
- -Unit Tare Weight for Gondolas must be less than or equal 110,000 lbs.
- -Unit Tare Weight for Hoppers must be greater than or equal 23,000 lbs.

- -Unit Tare Weight for Hoppers must be less than 120,000 lbs.
- -Unit Tare Weight for Tanks must be greater than 31,000 lbs.
- -Unit Tare Weight for Tanks must be less than 200,000 lbs.
- -Unit Tare Weight for Vflats must be greater than 55,000 lbs.
- -Unit Tare Weight for VFlats must be less than 136,000 lbs.
- -Unit Tare Weight for IFLTs must be greater than 10,000 lbs.
- -Unit Tare Weight for IFLTs must be less than 72,000 lbs.
- -Unit Tare Weight for all flats other than VFlats with ETC Q greater than 23,000 lbs.
- -Unit Tare Weight for all flats other than VFlats with ETC Q\_\_\_ must be less than 500,000 lbs.
- -Unit Segment Tare Weights must add up to the Total Tare Weight (A259)
- -Unit Tare Weight (A299) value must be reported to the nearest 100

#### **Unit Load Limit** A300

The maximum permissible weight of the commodity that can be loaded into the unit segment, reported in pounds

#### Range of Values for A300 Minimum Maximum 20000 500000

#### Validation Rule for A300

- -Unit Load Limit must not be reported if the Connected Unit Count (A020) is not reported
- -Unit Load Limit must be reported if Connected Unit Count (A020) is reported
- -Unit Segment Load Limits must add up to the Load Limit (LDLT)

#### A301 **Unit Inside Length**

#### The inside length of each unit segment

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A301

Minimum	Maximum		
20 ft 0 inches	99 ft 3 inches		

#### Validation Rule for A301

- -Unit Inside Length can only be reported if Connected Unit Count (A020) is reported
- -Unit Inside Length must be reported if Connected Unit Count (A020) is reported
- -Unit Inside Length for Flats other than Vflats must be greater than or equal to 20 feet.
- -Unit Inside Length for Flats and IFlats must be less than or equal to 99 feet 4 inches.

### Miscellaneous

### **Umler Effective Date**

FFDT

The date the rating activity (pre-registration, modification, etc.) is expected to occur

This element is not eligible for Query. Does not Carry Forward.

#### Validation Rule for EFDT

-Effective Date cannot be set to more than 13 months in the future.

#### NOTES:

 Effective Date will default to the 1st of the following month that equipment is registered

### Inspection

### **ABT Due Date (Repair Track)**

**DU13** 

### The due date of the air brake test per AAR Field Manual Rule 3

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### ABT 5-8 Year Due Date

DU58

The 5-8 year due date for the air brake test (ABT) after the ABT Due Date

#### (Renair Track)

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### **Inspection Date Done**

DTDN

The date the inspection was completed; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Validation Rule for DTDN

-The inspection date must not be 60 days before the Build Date

#### Inspection Due Date

INDD

The due date of the next inspection; used for all inspection types reported on equipment

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### **Inspection Performer**

**PERF** 

The SCAC that completed the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Inspection Reporter

RFPT

The SCAC that reported the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Location/SPLC

The SPLC of the inspecting location; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Air Brake Test Device

B523

### Indicates the type of test device used to perform the Air Brake Test

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### **Permissible Values for B523**

A Automatic (Non 4-Pressure)

M Manual

P Automatic (4-Pressure)

#### Validation Rule for B523

 -Air Brake Test Device (B523) must be reported for Air Brake Test inspection reported on or after December 10, 2020

#### **Insp Service Valve COTS Date**

B570

#### Brake valve service portion recondition date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

- Reports of 9999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYY

### Insp Service Valve OEM Warranty Date

B571

Brake valve service portion Original Equipment Manufacturer warranty date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### NOTES:

 Reports of 999999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.

Valid date format: MMYYYY

Insp Service Valve Part Number

B572

Brake valve service portion part number

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

# Insp Emergency Valve COTS Date B573 Brake valve emergency portion recondition date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### NOTES:

- Reports of 9999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYY

Insp Emergency Valve Part Number	B575
Brake valve emergency portion part number	

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Insp Service Valve Location Mandatory								B576		
Brake	valve	service	portion	locati	on					•
			•					/		

. Value does not carry forward for Single Clone / Multi-Clone.

Insp Emergency Valve OEM Warranty Date

B574

Brake valve emergency portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES

- Reports of 999999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYYYY

Insp Emergency Valve Location Mandatory

B577

Brake valve emergency portion location reported on an emergency brake valve inspection

Value does not carry forward for Single Clone / Multi-Clone.

### General **USCD** Status Code Mandatory Identifies the current operational state

Does not Carry Forward.

#### **Permissible Values for USCD**

ACTIVE INACTIVE 1

Ρ PRE-REGISTERED

#### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-Registered.
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID	0001
The equipment stenciled number	

#### Validation Rule for 0001

-Equipment Number must not be larger than 6 digits (i.e., 999999)

#### NOTES:

- Equipment ID includes the mark and number stenciled on the equipment. Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD999999).
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

Mechanical Designation Mandatory	UMMD
Equipment description without physical dimensions	•
Used for Transportation Codes.	

### Permissible Values for UMMD

Flat-Intermodal (Standard, Low Profile, Stack) FC

FCA Flat-Intermodal Articulated (Standard, Low Profile, Stack)

MWIF

#### Equipment Descriptor Mandatory **B341** Additional information about the type of equipment used in conjunction with

the Mechanical Designation to generate the Equipment Type Code (ETC) for Intermodal Flat, Locomotive, Chassis, Container, and Trailer equipment groups

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B341

FCC Standard Intermodal Low Profile Intermodal FCL

**FCLA** Low Profile Intermodal (Articulated) **FCM** Standard Intermodal Multi-Segment

**FCW** Well/Stack Intermodal

**FCWA** Well/Stack Intermodal (Articulated)

#### Validation Rule for B341

- If Mechanical Designation is FC, then Equipment Descriptor must be FCC, FCL, or FCW. (These are all of the single-segment cars.)
- If Mechanical Designation is FCA, the Equipment Descriptor must be FCM, FCLA, or FCWA. (These are all of the multi-segment cars.)
- If Mechanical Designation is MWIF, there is no restriction on the Equipment Descriptor

## **Equipment Type Code**

An alpha numeric code that describes the physical attributes of equipment

System Generated Field. This element is not eligible for Input.

### NOTES:

• Please Refer to Appendix I for More information Regarding ETC Generation

#### B403 **Maint of Way Service Type**

Identifies equipment Maintenance Of Way function

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B403

Crane / Boom Support Car C2

Flat-Wheel Sets F4

T4 Training Car

Т8 Track Geometry Car

#### Validation Rule for B403

- Maint of Way Service Type can only be listed on records where the Equipment Group (0002) or Pseudo Equipment Group (B547) is listed as MISC

Built Date Mandatory	BLDT
The date the construction of the equipment is complete	•

Data is Confidential. Used for Transportation Codes. Affects Rating. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for BLDT

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for BLDT

- -Built Date must be within the last 99 years
- -Built Date must not be in the future for equipment in Active Status
- -Prior and target equipment's Built Date (BLDT) must match for restenciling
- -Built Date cannot be updated within 30 days of the End of Service Date (B078)

- Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

Rebuilt / ILS Date	RBDT
The date the re-construction of the equipment is complete	

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

### Range of Values for RBDT

Minimum	Maximum
1/1/1900	12/31/9999

#### **Validation Rule for RBDT**

- -Rebuilt/Increased Life Service Date must be after the Built Date (BLDT)
- -Rebuilt Date must not be more than 70 years after the Built Date (BLDT)
- -Rebuilt Date is required for Extended Service Code (A096) 1, 2, or 3 for Increased Life Service
- -Rebuilt Date is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years of service
- -If Rebuilt Date is reported then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life Service

#### NOTES:

- Railroad cars -- applicable only to cars meeting status as provided in both STB Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office Manual.
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt Date unless car has been approved by the AAR.

**Rebuilt Flag RBFL** Identifies the equipment is nearing its end of life cycle

Data is Confidential. System Generated Field. This element is not eligible for Input.

#### **Permissible Values for RBFL**

No

=Mandatory ▲=Used in ETC Generation

**Owner Mandatory** 

UMOW

Primary reporting mark of the railroad or private company owning the car

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### NOTES:

Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.

0002

#### Identifies the various major car types

Used for Transportation Codes. Affects Rating.

LESE The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### Validation Rule for LESE

- -Umler Owner (UMOW) and Lessee are not allowed to be equal
- -Lessee cannot be a child reporting mark

#### NOTES:

 In order to assign privately marked cars to a pool, a railroad reporting mark must be reported.

#### **Maintenance Party**

MNPT

The parent reporting mark of the company responsible for the maintenance and repairs of the equipment

Does not Carry Forward.

#### **Mark Owner Category**

**B201** 

#### The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

#### Permissible Values for B201

- **US Private**
- С Canadian Private
- F Foreign Private
- Н Canadian Class II
- Canadian Class I
- Mexican Class I 1
- Κ Canadian Class III
- Mexican Private M
- Ν US Private Steamship
- 0 Canadian Private Steamship
- Ρ Mexican Private Steamship
- Q Foreign Private Steamship
- R US Class II Railroad
- U US Class I Railroad
- ٧ US Class III Railroad
- Mexican Class II Railroad W
- Υ Mexican Class III Railroad

#### NOTES:

• This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry.

#### **Prior Equipment ID**

**PRID** 

The previous reporting mark and number of the equipment

Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for PRID

-Prior and target equipment's Built Date (BLDT) must match

-The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

#### NOTES:

• Prior ID enables equipment records to share the same historical lineage. Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

**Last Update Date** R122

#### Date of the last Umler element change

System Generated Field. This element is not eligible for Input.

**Equipment Add Date** B082 Date the reporting mark and number was added to the Umler system

System Generated Field. This element is not eligible for Input.

**Status Change Reason USCR** 

Identifies the reason for the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

#### **Permissible Values for USCR**

- Initial Load
- М Movement
- 0 Status Changed Manually
- R Restencil

- If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

**Status Change Date** USCT

Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

**Extended Service Mandatory** 

A096

#### A code indicating the eligibility of an increase to the life cycle

Used for Transportation Codes. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A096

- 1st ILS Inspection, additional 5 years of Service 1
- 2 2nd ILS Inspection, additional 5 years of service (10 years total)
- 3 3rd ILS Inspection, additional 5 years of service (15 years total)
- С Built New between January 1, 1964 - June 30, 1974, Certified for 50 Years of Service, Built New Before July 1, 1974 & Received AAR Waiver
- Ε Built new from July 1,1974, Qualified for 50 Years Service
- Ν Built Before January 1, 1964, Qualified for 40 Years Service
- R Rule 88. Rebuilt cars
- Built between January 1, 1964 June 30, 1974, Qualified for 40 Years & U eligible for certification for 50 Years Service
- Car is certified (FRA Waiver & AAR) for 65 years of service from date built new from January 1, 1964

#### Validation Rule for A096

- -If Rebuilt Date (RBDT) is reported, then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life
- -Extended Service Code of C cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974
- -Extended Service Code of E cannot be reported if the car was built before July 1, 1974
- -Extended Service Code of N cannot be reported if the car was built on/after January 1, 1964
- -Extended Service Code of U cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974

=Mandatory

## **Umler**<sup>®</sup>

#### **Data Specification Manual**

#### NOTES:

- · Value is used to calculate End of Service Date (B078).
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years service.
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) 1, 2, 3, and V for Increased Life Service.

#### **End of Service Date**

B078

#### Indicates the date of the end of equipment life

Data is Confidential. System Generated Field. This element is not eligible for Input.

#### NOTES:

• Data becomes non-confidential two years prior to End of Service Date.

Do Not Load After

B590

#### Equipment should not be loaded after date shown in the element

Data is Confidential.

#### Validation Rules for B590

- -Do Not Load After (B590) cannot be updated thirty days prior to the date shown in the element.
- -Do Not Load After (B590) cannot be updated within thirty days of the End of Service Date (B078).
- -Do Not Load After (B590) date cannot be on or after the End of Service (B078) date

#### NOTES:

- The element will be initially populated by End of Service (B078) minus 30 days.
- Data becomes non-confidential thirty days prior to the Do Not Load After (B590) date.

#### **Equipment Identification**

EINN

#### Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

#### NOTES:

 Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections.

#### Info Conflict Status

B355

#### Indicates that an Informational Conflict exists on the Equipment record

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

### **Conflict Status**

B050

### Identifies the escalation level of equipment in active conflict

System Generated Field. Affects Rating. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B050

- Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

#### **Date of Original Conflict**

B063

#### The date the equipment was originally placed in the current conflict

System Generated Field. This element is not eligible for Input.

### Next Conflict Status

B135

Identifies the next escalation level of an equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B135

- 1 Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Notice Indicator** 

B137

#### Identifies equipment in error in Umler Notice Management

System Generated Field. This element is not eligible for Input.

#### **Conflict Status Next Date**

B062

#### The date the conflict status will be escalated

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

Rate Indicator

A070

#### Indicates the rate type applicable to the unit

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for A070

- 0 Zero-Rated Due to Conflict Errors
- 2 Private Mileage Rate
- 4 Private Car Owner Designated Rate
- 6 Zero-Rated Scrap (S\_,SX), AAR Overage (XA), FRA Overage (YA), Umler Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].
- M Railroad Market Rate
- Q Zero-Rated Railroad Market Rate Due to Conflict Errors

#### NOTES:

 If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.

#### **Private Zero Rate**

B150

Indicates a private car is subject to contractual agreement, nullifying mileage

Affects Rating.

#### Permissible Values for B150

Y Yes

### NOTES:

Reporting "Y" generates Rate Indicator (A070) value 6 and a zero rate.

### TTX Hourly Rate

B212

#### Time Charge-The TTX hourly rate for the equipment

Data is Confidential. This element is not eligible for Query.

### Range of Values for B212

Minimum	Maximum
0	9

#### Validation Rule for B212

-TTX Hourly rate can only be set on TTX owned Equipment.

**TTX Mileage Rate** 

B213

### Mileage Charge-The TTX mileage rate for the equipment

Data is Confidential. This element is not eligible for Query.

#### Range of Values for B213

Minimum	Maximum
0	1

Validation Rule for B213

B083

-TTX Mileage rate can only be set on TTX owned Equipment.

First Movement Date USAT The first movement date under the stenciled mark of the equipment

This element is not eligible for Input. Does not Carry Forward.

**Equipment Add Company** 

The reporting mark of the company that added the equipment

System Generated Field. This element is not eligible for Input.

**Registration Reason B174** 

The code indicating the reason this equipment is added

Does not Carry Forward.

Permissible Values for B174

Add-Back Ν New Pending Restencil Restencil

**Restencil Program Ind B177** Identifies the equipment is under a restencil program

Permissible Values for B177

Yes

**Delete Reason Code** B064 A code that designates the reason the equipment has been deleted

Value does not carry forward for Add Back.

#### Permissible Values for B064

- Restenciled
- D Destroyed or wrecked
- Lease terminated, removed from fleet L
- Retired unserviceable beyond economic repair
- R Rebuilt
- Sold Serviceable S
- Over age retired for dismantling W
- Υ Error, reporting did not exist
- Z Other

Non-Compliant Wheelsets	B544
Equipment record is incomplete and has a missing wheelset component ID	
association. Refer to AAR Field Manual Rule 44 for industry requirem	ients 🌞

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for B544

- -A Wheelset Component ID is required for each applicable location on equipment built on or after January 1, 2016
- -A Wheelset Component ID is required for each applicable location on equipment rebuilt on or after January 1, 2016 and Gross Rail Load (A266) is greater than 268,000 lbs

- A "Y" will be system generated if the equipment is active and the number of Wheelset CID's required is not equal to the Axle Count (A024) on the equipment
- Validation rule applies to equipment that has been in Active status for 60 days

**Pseudo Equipment Group** 

Equipment needs to be identified as a miscellaneous record while maintaining all elements linked to the original equipment group

System Generated Field.

#### Permissible Values for B547

MISC Miscellaneous

### Weight

Gross Rail Load/Weight Mandatory

A266

The maximum permissible weight on rail of the equipment and the load, reported in pounds

Affects Rating.

Range of Values for A266

Minimum	Maximum
113000	2835000

#### Validation Rule for A266

-Gross Rail Load must be equal to the Load Limit (LDLT) plus the Tare Weight (A259)

#### NOTES:

• For current single-unit IFLTs, lowest GRL is 113,000 lbs. Maximum GRL for 36 axles with 7" bearings is 2,835,000 lbs.

Use Table 1 below to determine Gross Rail Load, if Qualification for Increased Gross Rail Load (B344) does not exist.

ΒI		

Journal Size	Load per Axle	Gross Rail Load for 4- axle Equipment
B - 4 1/2" x 8"	25,750 lbs.	103,000 lbs.
C - 5" x 9"	35,500 lbs.	142,000 lbs.
D - 5 1/2" x 10"	44,250 lbs.	177,000 lbs.
E - 6" x 11" (w/28"	48,750 lbs.	195,000 lbs.
1W wheels)		
E - 6" x 11" (w/all	55,000 lbs.	220,000 lbs.
other wheels		
F - 6 1/2" x 12"	65,750 lbs.	263,000 lbs.
G - 7" x 12"	78,750 lbs.	315,000 lbs.
K - 6 1/2" x 9"	71,500 lbs.	263,000 lbs.
M - 7" x 9"	78,750 lbs.	315,000 lbs.

Use Table 2 below to determine Gross Rail Load for 4-axle equipment if Qualification for Increased Gross Rail Load (B344) exists.

#### TABLE 2 -

Qualification for Increased Gross Rail Load (B344)	Journal Size	Gross Rail Load
1	K - 6 1/2" x 9"	286,000 lbs.
1	G - 7" x 12"	286,000 lbs.
1	M - 7" x 9"	286,000 lbs.
2	F - 6 1/2" x 12"	286,000 lbs.
2	K - 6 1/2" x 9"	286,000 lbs.
3	F - 6 1/2" x 12"	268,000 lbs.
3	K - 6 1/2" x 9"	268,000 lbs.

- For multi-unit equipment, report the total gross rail load for the entire set.
- Refer to Field Manual Rule 70 if additional information is required.

A Gross Rail Load less than the listed or calculated values may be entered;

- Star Code (A247) must be R or S, and
- Load Limit (LDLT) must also be reduced, ensuring Tare Weight (A259) plus Load Limit (LDLT) equals the reported Gross Rail Load.

For equipment having two or more different journal sizes, see following examples:

Example for Drawbar Connected:

- A 3-unit drawbar connected car has 12 axles.
- The end units (Locations A and B) each have 4 axles with E 6" x 11" iournals.
- The intermediate unit (Locations C) has 4 axles with F 6 1/2" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

8 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 440,000 lbs. + 4 ea. F-6 1/2" x 12" journal axles X 65,750 lbs. per axle = 263,000 lbs. Gross Rail Load = 703,000 lbs.

Example for Articulated Connected:

A 5-unit articulated car has 6 trucks (12 axles).

The end trucks (Locations A and B) each have 2 axles with E -  $6" \times 11"$  journals.

The intermediate trucks (Locations C, D, E, and F) each have 2 axles with G - 7" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

- 4 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 220,000 lbs.
- + 8 ea. G-7" x 12" journal axles X 78,750 lbs. per axle = 630,000 lbs.
- Gross Rail Load = 850,000 lbs.

Tare Weight Mandatory	Tare	Weig	ht M	and	ator	v
-----------------------	------	------	------	-----	------	---

A259

The equipment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

Affects Rating.

#### Range of Values for A259

Minimum	Maximum
43000	918000

#### **Validation Rule for A259**

- -Tare Weight (A259) of IFLT with a blank Connected Unit Count (A020) must contain values between 43000 lbs. and 102000 lbs.
- -Tare Weight (A259) of IFLT where Connected Unit Count (A020) is 2, must contain values between 86000 lbs. and 204000 lbs.
- -Tare Weight (A259) of IFLT where Connected Unit Count (A020) is 3, must contain values between 96000 lbs. and 306000 lbs.
- -Tare Weight (A259) of IFLT where Connected Unit Count (A020) is 4, must contain values between 141000 lbs. and 408000 lbs.
- -Tare Weight (A259) of IFLT where Connected Unit Count (A020) is 5, must contain values between 152000 lbs. and 510000 lbs.
- -Tare Weight (A259) of IFLT where Connected Unit Count (A020) is 6, must contain values between 258000 lbs. and 612000 lbs.
- -Tare Weight (A259) of IFLT where Connected Unit Count (A020) is 7, must contain values between 301000 lbs. and 714000 lbs.
- -Tare Weight (A259) of IFLT where Connected Unit Count (A020) is 8, must contain values between 344000 lbs. and 816000 lbs.
- -Tare Weight (A259) of IFLT where Connected Unit Count (A020) is 9, must contain values between 387000 lbs. and 918000 lbs
- -IFlat Cars of ETC Q\_1\_ can only have a maximum Tare Weight of 70,000 lbs.
- -IFlat Cars of ETC Q\_2\_ to Q\_0\_ and S\_3\_ to S\_8\_ can only have a maximum Tare Weight of 360.000 lbs.
- Tare Weight (A259) value must be reported to the nearest 100 pounds

#### NOTES:

- Do not report an average Tare Weight for car series, except for Pre-Registered cars
- · When cars are made active, the actual Tare Weight must be recorded

Load Limit Mandatory

The maximum permissible weight of the commodity that can be loaded into the equipment, reported in pounds

Affects Rating.

#### Range of Values for LDLT

ange or values for EBET		
Minimum	Maximum	
69000	2061000	

#### Validation Rule for LDLT

- -Load Limit (LDLT) of IFLT with a blank Connected Unit Count (A020) must contain values between 69000 lbs. and 229000 lbs.
- -Load Limit (LDLT) of IFLT where Connected Unit Count (A020) is 2, must contain values between 138000 lbs. and 458000 lbs.

- -Load Limit (LDLT) of IFLT where Connected Unit Count (A020) is 3, must contain values between 207000 lbs. and 687000 lbs.
- -Load Limit (LDLT) of IFLT where Connected Unit Count (A020) is 4, must contain values between 276000 lbs. and 916000 lbs.
- -Load Limit (LDLT) of IFLT where Connected Unit Count (A020) is 5, must contain values between 336000 lbs. and 1145000 lbs.
- -Load Limit (LDLT) of IFLT where Connected Unit Count (A020) is 6, must contain values between 414000 lbs. and 1374000 lbs.
- -Load Limit (LDLT) of IFLT where Connected Unit Count (A020) is 7, must contain values between 483000 lbs. and 1603000 lbs.
- -Load Limit (LDLT) of IFLT where Connected Unit Count (A020) is 8, must contain values between 552000 lbs. and 1832000 lbs.
- -Load Limit (LDLT) of IFLT where Connected Unit Count (A020) is 9, must contain values between 621000 lbs. and 2061000 lbs.
- -Iflat Cars of Equipment Type codes Q-2- to Q-9- and S-3- to S-8- can only have a max Load Limit of 200000 lbs.

#### NOTES:

- For connected unit cars report the sum of the load limits for all units in the set.
- For current single-unit IFLTs, lowest load limit is 69,200 lbs. (rounded down to 69000). Largest load limit is 228,900 lbs. (rounded up to 229,000).
   Maximum permissible value shown above is 229,000 lbs. X 9 = 2,061,000 lbs.]

#### Weighing Status Mandatory

A289

Indicates the weight information is an estimate or an actual measurement

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A289

- A Actual
- E Estimated
- V Verified correct Tare Weight
- X Tare Weight subject to verification (System Generated)

#### Validation Rule for A289

- -Equipment cannot be within a series of 10 with identical Tare Weights (A259), refer to Appendix P for further information on resolving tare weight conflicts
- -When Status Code changes to Active or Inactive Weighing Status must be reported as Actual (A) or Verified (V) within 60 days of Status Code change

### Weighing Date

A288

The date the equipment was actually weighed

Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A288

Minimum	Maximum	
1/1/1900	12/31/9999	

#### **Validation Rule for A288**

- -If Weighing Date is reported the Tare Weight (A259) must be reported
- -When Weighing Date is reported then Weighing Status (A289) must be A (Actual) or V (Verified)
- -If Weighing Status (A289) is A (Actual) or V (Verified correct Tare Weight) then Weighing Date must be reported
- -Weighing Date must be on or before the current date
- -Weighing Date cannot be before Built / Rebuilt date

Star Code

LDLT

A247

Indicates a reduction of the Load Limit (LDLT) of the equipment per AAR Rule 70

Affects Rating.

#### Permissible Values for A247

- R Body Capacity less than Truck Capacity
- S Reduced Load Limit

#### NOTES:

Star Code must be reported if Gross Rail Load (A266) is less than the
maximum gross rail load allowed for the reported combination of Axle Count
(A024) and Journal Size (A147).

**B344** 

### **Data Specification Manual**

### Qual for Inc GRL

Code designating AAR approval for operating 4-axle equipment at a gross rail load greater than 263,000 lbs per AAR Rule 88

#### Permissible Values for B344

- 1 Rule 88 IGRL Code 1 (> 263,000 lbs. and <= 286,000 lbs. GRL per AAR Specification S-286)
- 2 Rule 88 IGRL Code 2 (> 263,000 lbs. and <= 286,000 lbs. GRL)
- 3 Rule 88 IGRL Code 3 (> 263,000 lbs. and <= 268,000 lbs. GRL)

#### Validation Rule for B344

- Equipment having Qualification for Increased Gross Rail Load of 1 or 2 must have a Gross Rail Load (A266) that does not exceed 286,000 lbs.
- Equipment having Qualification for Increased Gross Rail Load of 3 must have a Gross Rail Load (A266) that does not exceed 268,000 lbs.
- Equipment having Qualification for Increased Gross Rail Load of 1 must have a Journal Size (A147) of K, G, or M
- Equipment having Qualification for Increased Gross Rail Load of 2 or 3 must have a Journal Size (A147) of F or K
- Equipment having Qualification for Increased Gross Rail Load of 1, 2, or 3 must have a Wheel Diameter (A294) of 36 or 38
- Equipment having Qualification for Increased Gross Rail Load (B344) of 3, and a Gross Rail Load (A266) less than 268,000 lbs., must have Star Code of S
- Equipment having Qualification for Increased Gross Rail Load of 1 or 2 must have a Gross Rail Load (A266) that does not exceed 286,000 lbs.

#### NOTES:

 Qualification for Increased Gross Rail Load must be granted by the AAR, and applies only to 4-axle equipment approved for gross rail loads greater than 263,000 lbs. and less than or equal to 286,000 lbs. It does NOT apply to 4-axle, 315,000 lbs. gross rail load equipment operating with a Star Code.

### **Dimension**

Plate Code *Mandatory*A046

Indicates the extreme height and width clearance of the equipment

Affects Rating.

#### Permissible Values for A046

- B Plate Code B
- C Plate Code C
- E Plate Code E
- F Plate Code F
- G Clearance Code G
- H Plate Code H
- N Plate Code N

#### NOTES:

- For a description of Plate Codes, please see Appendix J at the back of this manual.
- o Report B: If clearance does not exceed Plate B
- Report C: If clearance is greater than Plate B. but does not exceed Plate C
- Report E: If clearance is greater than Plates B and C, but does not exceed Plate E.
- Report F: If clearance is greater than Plates B, C and E, but does not exceed Plate F
- o Report G: If clearance exceeds Plates B, C, E, F, H, and N.
- Report H: If clearance is greater than Plates B, C, E, and F, but does not exceed Plate H
- Report N: If clearance is greater than Plates B, C, E, and F, but does not exceed Plate N.
- There is no AAR Plate G. Clearance Code G is included in Umler to represent equipment that does not fit any existing AAR clearance plates.
- For ARTICULATED/MULTI-UNIT SET report the most restrictive clearance plate of UNIT in the set. (For ARTICULATION see Section VII).

#### **Outside Length** *Mandatory*

**OSLG** 

The outside length over pulling faces of couplers in normal position

position

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

## Range of Values for OSLG

iviinimum	iviaximum	
24 ft 0 inches	720 ft 0 inches	

#### Validation Rule for OSLG

- -Non-Articulated I-Flats cannot have an Outside Length greater than 124 feet
- -Outside Length (OSLG) on freight cars (except refrigerators) must not exceed Inside Length (A135) by more than 16 feet
- Outside Length (OSLG) on refrigerator cars (Mechanical Designation RB, RBL, RP, RPL, or RC) must not exceed Inside Length (A135) by more than 26 feet

#### NOTES:

- For connected unit cars report the maximum coupled length of the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

### Outside Extreme Width Mandatory

Δ186

### The outside extreme width of the equipment

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A186

Minimum	Maximum	
7 ft 0 inches	12 ft 7 inches	

#### Validation Rule for A186

- -Outside Extreme Width must not exceed 10 feet 8 inches for Plate Codes B, C, E, F, or N
- -Outside Extreme Width (A186) for Plate Code A must not be less than 10 feet 8 inches.
- Outside Extreme Width (A186) for Plate Code A must not exceed 10 feet 10 inches.

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

#### Outside Extreme Height Mandatory

A185

Height from top of rail to extreme projecting height

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A185

Minimum	Maximum	
2 ft 0 inches	22 ft 6 inches	

#### Validation Rule for A185

- -Outside Extreme Height for Plate Code B must be less than or equal to 15 feet 1 inch
- -Outside Extreme Height for Plate Codes C or I must be less than or equal to 15 feet 6 inches
- Outside Extreme Height for Plate Code E must be less than or equal to 15 feet 9 inches
- -Outside Extreme Height for Plate Code F must be less than or equal to 17 feet 0 inch
- Outside Extreme Height for Plate Code H must be less than or equal to 20 feet 3 inches
- -Outside Extreme Height for Plate Code N must be less than or equal to 17 feet 1 inch

#### NOTES:

• For connected unit cars report the dimension of the largest unit in the set.

The highest point at which the extreme width of the equipment occurs

• Round fraction to the higher inch, e.g., 05 1/4" = 06"

Outside Height Extr Width Mandatory

A187

Displayed in feet and inches on the Web. Stored in inches.

Range of Values for A187

MinimumMaximum1 ft 0 inches20 ft 0 inches

●=Mandatory ▲=Used in ETC Generation

#### Validation Rule for A187

- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 8 inches if Outside Height Extreme Width is 13 feet 10 inches or less
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 7 inches if Outside Height Extreme Width is 13 feet 11 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 0 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 4 inches if Outside Height Extreme Width is 14 feet 1 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 2 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 3 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 4 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 9 inches if Outside Height Extreme Width is 14 feet 5 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 5 inches if Outside Height Extreme Width is 14 feet 6 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 2 inches if Outside Height Extreme Width is 14 feet 7 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 10 inches if Outside Height Extreme Width is 14 feet 8 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 6 inches if Outside Height Extreme Width is 14 feet 9 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 3 inches if Outside Height Extreme Width is 14 feet 10 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 11 inches if Outside Height Extreme Width is 14 feet 11 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 6 inches if Outside Height Extreme Width is 15 feet 0 inches
- Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 4 inches if Outside Height Extreme Width is 15 feet 1 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 8 inches if Outside Height Extreme Width is 14 feet 3 inches or less
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 7 inches if Outside Height Extreme Width is 14 feet 4 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 5 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 4 inches if Outside Height Extreme Width is 14 feet 6 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 7 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 8 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 9 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 9 feet 9 inches if Outside Height Extreme Width is 14 feet 10 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 9 feet 5 inches if Outside Height Extreme Width is 14 feet 11 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 9 feet 2 inches if Outside Height Extreme Width is 15 feet 0 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 8 feet 10 inches if Outside Height Extreme Width is 15 feet 1 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 8 feet 6 inches if Outside Height Extreme Width is 15 feet 2 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 8 feet 3 inches if Outside Height Extreme Width is 15 feet 3 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 11 inches if Outside Height Extreme Width is 15 feet 4 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 8 inches if Outside Height Extreme Width is 15 feet 5 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 4 inches if Outside Height Extreme Width is 15 feet 6 inches
- Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 8 inches if Outside Height Extreme Width is 15 feet 2 inches or less

- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 6 inches if Outside Height Extreme Width is 15 feet 3 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 3 inches if Outside Height Extreme Width is 15 feet 4 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 9 feet 6 inches if Outside Height Extreme Width is 15 feet 5 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 8 feet 8 inches if Outside Height Extreme Width is 15 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 7 feet 11 inches if Outside Height Extreme Width is 15 feet 7 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 7 feet 1 inches if Outside Height Extreme Width is 15 feet 8 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 6 feet 3 inches if Outside Height Extreme Width is 15 feet 9 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 8 inches if Outside Height Extreme Width is 16 feet 3 inches or less
- Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 7 inches if Outside Height Extreme Width is between 16 feet 4 inches and 16 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 6 inches if Outside Height Extreme Width is 16 feet 7 inches
- Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 3 inches if Outside Height Extreme Width is 16 feet 8 inches
- Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 0 inches if Outside Height Extreme Width is 16 feet 9 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 8 inches if Outside Height Extreme Width is 16 feet 10 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 5 inches if Outside Height Extreme Width is 16 feet 11inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 2 inches if Outside Height Extreme Width is 17 feet 0 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 8 inches if Outside Height Extreme Width (A187) is 16 feet 9 inches or less
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 6 inches if Outside Height Extreme Width (A187) is 16 feet 10 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 4 inches if Outside Height Extreme Width (A187) is 16 feet 11 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 2 inches if Outside Height Extreme Width (A187) is 17 feet 0 inches
- -Outside Extreme Width (A186) for Plate Code N must not exceed 9 feet 11 inches if Outside Height Extreme Width (A187) is 17 feet 1 inch

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

Inside Length A135
The inside length of the equipment from end to end inside walls, linings, and

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A135

permanent bulkheads

MinimumMaximum20 ft 0 inches99 ft 3 inches

#### Validation Rule for A135

 -Inside Length/Inside Platform Length must be less than or equal to Outside Length (OSLG)

#### NOTES:

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the shortest dimension of a unit in the set.

Inside Width A138

The inside width of the equipment from side walls and linings

Displayed in feet and inches on the Web. Stored in inches.

Range of Values for A138

Minimum Maximum

●=Mandatory ▲=Used in ETC Generation

= Affects Rating

– **165** –

4 ft 0 inches 10 ft 6 inches

#### **Validation Rule for A138**

- -IFlat Cars of ETC S and Q can only have a minimum Inside Platform Width of 8 feet 0 inches
- -IFlat Cars of ETC S and Q can only have a maximum Inside Platform Width of 10 feet 6 inches
- -Inside Width/Inside Platform Width must not exceed Outside Extreme Width

#### NOTES:

• For connected unit cars report the shortest dimension of a unit in the set.

Inside Height	A133
The inside height of the equipment from the floor to the top of the si	de, or to
the lowest point of the interior ceiling	

Range of Values for A133		
Minimum	Maximum	
12	169	

#### NOTES:

For connected unit cars report the shortest dimension of a unit in the set.

### **DimensionUnit Segment Components**

Side Wall Height	B195
Measurement from top face of loading pad to top of inside wall of Component of Unit Segment (ICPSC)	on well cars.

#### Range of Values for B195

Minimum	Maximum	
0.100000000000000001	99.900000000000006	

#### NOTES:

For connected unit cars report the dimension of the smallest side door height of a unit in the set.

Truck Center Length	A276
The length between the centers of the two truck systems	

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A276

Minimum	Maximum	
15 ft 0 inches	64 ft 0 inches	

#### Validation Rule for A276

- Truck Center Length is required for cars with an Outside Length (OSLG) of greater than 62 feet 6 inches

#### NOTES:

• For connected unit cars report the dimension of the largest unit in the set.

Platform Hght Above Rail Mandatory	A192
Describes the platform height above the rail in inches	• 🔺

Used in ETC Generation. Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A192

Minimum	Maximum
0 ft 10 inches	6 ft 0 inches

#### Validation Rule for A192

- -IFlat Cars of ETC Q and S can only have a maximum Platform Height Above Rail/Deck Height Above Ground of 4 feet 0 inches
- -IFlat Cars of ETC Q\_1\_ can only have a minimum Platform Height Above Rail/Deck Height Above Ground of 2 feet 0 inches
- -IFlat Cars of ETC Q\_1\_can only have a maximum Platform Height Above Rail/Deck Height Above Ground of 2 feet 8 inches
- -IFlat Cars of Equipment Type codes Q1, Q2, Q3, Q4, Q5, Q6, Q7, Q9 and S, can only have a minimum Platform Height Above Rail/Deck Height Above Ground of 10 feet
- -IFlat Cars with Equipment Type codes P1\_\_, P2\_\_, P5\_\_, or P6\_\_ can only have a minimum Platform Height Above Rail/Deck Height Above Ground of 2 feet

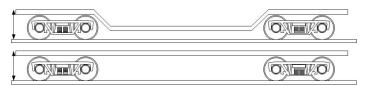

- -IFlat Cars with Equipment Type codes P1 , P2 , P5 , or P6 can only have a maximum Platform Height Above Rail/Deck Height Above Ground of 3 feet 3 inches
- -IFlat Cars with Equipment Type codes P3 , P4 , P7 , or P8 can only have a minimum Platform Height Above Rail/Deck Height Above Ground of 3 feet 4 inches
- -IFlat Cars of Equipment Type codes P3\_\_, P4\_\_, P7\_\_, P8\_\_, can only have a Max Platform Height Above Rail/Deck Height Above Ground of 05 feet 11 inches
- -IFlat Cars of Equipment Type codes P9\_\_can only have Platform Height Above Rail/Deck Height Above Ground of 03 feet 02 inches
- -Platform Height cannot be greater than Outside Height

#### NOTES:

• EXCEPTIONS: For bi-level and tri-level flat cars, measurement is from top of rail to top of floor of lower deck. Feet in Pos. 45-46, inches in Pos. 47-48. Round fraction to the higher inch, e.g., 05 1/4" = 06". This field must agree relationally for V\_\_\_ Equipment Type Codes and P\_\_\_.

P	MINIMUM—1ft 1in MAXIMUM—4ft 9in

## Specification

Specification	
Truck Count	B256
The total number of trucks on the equipment	

System Generated Field. This element is not eligible for Input.

### Range of Values for B256

Minimum	Maximum
2	18

Axle Count Mandatory	A024
The total number of axles on the equipment	•=

Affects Rating.

#### Range of Values for A024 Minimum Maximum 4 36

#### Validation Rule for A024

- -Axle Count must be greater than or equal to 4
- -Axle Count for an articulated car must be greater than or equal to ((Connected Unit Count (A020)  $\times$  2) + 2)
- -Axle Count for a draw bar connected car must be greater than or equal to (Connected Unit Count (A020) x 4)
- -Total Axle Count must match sum of truck axle counts

Wheel Bearing Type Mandatory	B191
Indicates the wheel bearing journal design for the equipment	•

Affects Rating.

#### Permissible Values for B191

Plain R Roller

#### Validation Rule for B191

- -Cars with Plain Bearings will have a Transportation Code (TCOD) and Transportation Condition Code (TCCD) of either YA, S\_, SX, or XJ
- -Equipment cannot have Plain Bearings if Built Date (BLDT) is on or after January 1, 1993

**Connector Manufacturer** The connector manufacturer, based on the Intermediate Connector Style (B115)

of the intermodal flatcar

### Permissible Values for B545

AS ASF

Columbus Castings (AKA Buckeye) CC

NA National

Cardwell Westinghouse

#### Validation Rule for B545

- -Connector Manufacturer is mandatory for equipment with a Built Date (BLDT) or Rebuilt Date (RBDT) on or after April 1, 2016
- -Connector Manufacturer must not be reported if the Intermediate Connector Style (B115) is not reported
- -The Connector Manufacturer must be AS, NA, or SA when the Intermediate Connector Style (B115) is Articulated
- -The Connector Manufacturer must be AS, NA, or CC when the Intermediate Connector Style (B115) is Drawbar
- -The Connector Manufacturer NA can only be reported on cars built or rebuilt prior to January 1, 2003

#### **Deck Container Securement**

**B546** 

The type of deck container securement of the intermodal flatcar

#### Permissible Values for B546

- Not Equipped NE
- PA Pedestal Lock Adjustable
- PB Pedestal Lock Adjustable and Retractable
- PF Pedestal Lock Fixed
- PR Pedestal Lock Retractable
- TI Twist Lock

#### Validation Rule for B546

- -Light Weight and Conventional Intermodal Cars, with Equipment Type Codes (UMET) of Q\_\_\_ and P\_\_\_, that have a Built Date (BLDT) or Rebuilt Date (RBDT) on or after April 1, 2016 must report the type of Deck **Container Securement**
- -Deck Container Securement cannot be reported for Stack Cars with an Equipment Type Code (UMET) of S\_\_\_\_

#### **Bearing Shielded From HBD**

B021

Indicates the wheel bearings are shielded from wayside hot box detectors

#### Permissible Values for B021

Yes

### **Brake Shoe Type Mandatory**

B026

Indicates the type of brake shoe on the equipment

### Permissible Values for B026

- **Tread Conditioning**
- Н **High Friction Composite**
- Low Friction Composite/Cast Iron L

### CC Side Bearing Type

Δ146

Indicates the travel range of the constant contact side bearings installed on the equipment

#### Permissible Values for A146

- LC Long Travel Constant Contact
- **Short Travel Constant Contact** SC

#### Validation Rule for A146

-Equipment having Qualification for Increased Gross Rail Load (B344) of 1 must have Constant Contact Side Bearing Type of LC

#### **Empty/Load Device Eqpd**

B075

Indicates that the air brake system includes a device to determine if the equipment is empty or loaded, and then varies the braking forces accordingly

#### Permissible Values for B075

Yes

### **Center of Gravity Empty**

When empty, indicates the height from Top of Rail to the Center of Gravity

Range of Values for A045

Minimum Maximum

#### 98 22

#### **Validation Rule for A045**

- All cars that exceed Plate Code (A046) C must report Center of Gravity Empty except for cars with Equipment Type Code (UMET) of J

### **Remote Monitoring Device**

B176

Indicates the equipment has a device that transmits a signal or records data

#### Permissible Values for B176

Yes

#### Ν No

NOTES:

Per AAR S-2045, This may be data related to ride quality, geographic location, temperature/condition of the load, load/empty status, etc.

### **Unit Segment Components**

**Intermodal Loading Method** 

Intermodal Flat Loading Method LOLO (ICPSC) Used in ETC Generation.

#### Permissible Values for B286

 $\mathsf{CL}$ Circus and Lift On-Lift Off

LO Lift On-Lift Off

No

Υ Yes Ν

TOFC/COFC Load Wdth Cde

B283

**B286** 

#### TOFC/COFC Loading Width Code Used in ETC Generation.

#### Permissible Values for B283

- 8 feet 1
- 2 8 feet 6 inches
- 3 8 feet and 8 feet 6 inches

#### **Intermodal Transport Serv**

**B287** 

### Intermodal Flat Transport Service

Used in ETC Generation.

#### Permissible Values for B287

- CO Container Only
- TC Trailer or Container
- TO **Trailer Only**

**Single Lngth Load Config** 

**B288** 

**Umler Intermodal ETC Loading Configuration** 

Used in ETC Generation.

#### Permissible Values for B288

DB0 DBL BOTH Cars not otherwise classified--contact car owner

- DB1 DBL BOTH Trailers and/or containers as follows -- 1-40 ft trailer without and 1-45ft trailer with nose mounted reefer, or 2-40 ft trailers with nose mounted reefer, or various combinations of 20ft and 40ft containers and/or trailers, or 1-45ft container with one other container up to 35 ft long
- DB2 DBL BOTH Trailers and/or containers as follows -- 2-45ft trailers without nose mounted reefers or various combinations of 20ft and 40ft containers and/or trailers, or 1-45ft container with one other container up to 35ft long
- DB3 DBL BOTH Trailers or Containers as follows -- 2-40 ft. trailers or 2-45 ft. trailers or 3-28 ft. trailers, all without front mounted refrigeration units. Cars equipped with container pedestals for carrying various length containers ranging from 20 ft. to 45 ft
- DC0DBL CNTR Cars not otherwise classified--contact car owner
- DC1 DBI\_CNTR 2-40ft containers only
- DC2 DBL CNTR 2-40ft or 4-20ft containers and various combinations
- DC3 DBL CNTR 2-40ft or 4-20ft containers and various combinations or 1-45ft container with one other container up to 35ft long

- DTO DBL TRLR Cars not otherwise classified, contact owner
- DT1 DBL TRLR 2-40ft trailers with or without nose mounted reefers (If 1st Numeric equals 9, car will not handle nose mounted reefers)
- DT2 DBL TRLR 1-40ft trailer without and 1-45ft trailer with nose mounted reefer, or 2-40ft trailers with nose mounted reefer
- DT3 DBL TRLR 2-45ft trailers
- DT4 DBL TRLR Any two trailers with aggregate length up to 90ft
- DT5 DBL TRLR 1-40ft trailer without and 1-45ft trailer with nose mounted reefer, or 3-28ft Pups or 2-40ft trailers with nose mounted
- DT6 DBL TRLR Any two trailers with aggregate length up to 90ft or 3-28ft Pups
- PB<sub>0</sub> SGL BOTH All cars
- PC0 SGL CNTR Cars not otherwise classified, contact owner
- SGL CNTR 1-40ft and 1-20ft container or 3-20ft containers PC1
- PC2 SGL CNTR 1-40ft or 1-40ft 03in container
- PT0 SGL TRLR Cars not otherwise classified, contact owner
- PT1 SGL TRLR Trailer up to 40ft long
- PT2 SGL TRLR Trailer up to 45ft long
- PT3 SGL TRLR Trailer up to 48ft long
- PT4 SGL TRLR Trailer up to 50ft long
- PT5 SGL TRLR Trailer up to 53ft long
- PT6 SGL TRLR Trailer up to 57ft long
- QB0 Q BOTH Cars not otherwise classified--contact car owner
- OB1 Q BOTH One 28ft through 48ft trailer on all platforms or one 40ft through 48ft by 96in or 102in container on all platforms, or two 20ft by 96in or 102in containers on A and B platforms Only
- OB<sub>2</sub> Q BOTH One 28ft through 53ft trailer on all platforms or one 40ft through 53ft by 96in or 102in container on all platforms, or two 20ft by 96in or 102in containers on A and B platforms Only
- QB3 Q BOTH 1-28ft, 1-40ft, 1-45ft, 1-48ft, 1-53ft Trailer on each segment or 1-40ft, 1-45ft, 1-48ft, 1-53ft Container on each segment
- QB4 Q BOTH 2-28ft trailer, or 1-40ft or 1-45ft or 1-48ft or 1-53ft or 1-57ft trailer on all platforms, or 1-40ft or 1-45ft or 1-48ft or 1-53ft by 96in or 102in container on all platforms
- QB5 Q BOTH 1-20ft, 1-40ft, 1-53ft trailer; 2-20-ft, 2-40ft, 2-53ft containers
- 000Q CNTR Cars not otherwise classified--contact car owner
- QC1 Q CNTR Two 20ft or one 40ft, 45ft or 48ft by 96in by 96in or 102in container(s) on A, B, and D platforms and one 40ft, 45ft or 48ft by 96in or 102in container on C and E platforms
- QC2 Q CNTR Two 20ft or one 40ft, 45ft or 48ft by 96in or 102in container(s) on all platforms
- QT0 Q TRLR Cars not otherwise classified--contact car owner
- Q TRLR One 40ft-45ft trailer per platform QT1
- QT2 Q TRLR One 40ft-48ft trailer per platform
- OT3 Q TRLR One 40ft-53ft trailer per platform
- QT4 Q TRLR One 40ft-57ft trailer per platform
- QT5 Q TRLR One 40ft-45ft trailer per platform with nose mounted reefer units on trailers on A and B platforms Only
- OT6 Q TRLR One 28ft-48ft trailer per platform
- QT7 Q TRLR Four trailers up to 45ft long, without nose-mounted reefer units per car, or three trailers, up to 56ft long per car, where the center trailer must be 48ft long or longer and Only the center trailer may be equipped with nose-mounted reefer unit and/or 42in king pin settings (deck height is 3ft6in ATR)
- QT8 Q TRLR Three trailers up to 56ft long per car, with up to 42in king pin settings and/or nose-mounted reefer units per car. The center trailer must be 48ft long or longer (deck height is 3ft6in ATR)
- SA0 IBC Cars not otherwise classified--contact car owner
- SA1 IBC 1-40ft, 45ft or 48ft container in well and 1-40, 45ft, 48ft or 53ft container stacked on top of well
- SA2 IBC 2-20ft, 1-40ft, 45ft or 48ft container in well and 1-40ft, 45ft, 48ft or 53ft container stacked on top of well
- SA3 IBC 2-20ft, 1-40ft, 45ft or 48ft container in well and 1-40ft, 48ft or 53ft container stacked on top of well or 2-28ft trailers or 1-40ft through 53ft trailer in well. Trailers can be either 96in or 102in wide and can be equipped with nose-mounted refrigerator units

# Umler®

#### **Data Specification Manual**

- SA4 IBC 2-20ft or 28ft containers or 1-40ft, 45ft, 48ft or 53ft container in well and 2-28ft containers, 1-40ft, 45ft, 48ft or 53ft container stacked on top of well
- SA5 IBC 2-20ft, 1-40ft, 45ft, 48ft or 53ft container in well and 1-40ft, 45ft, 48ft or 53ft container stacked on top of well
- SA6 IBC Container only, Bottom: 2-20ft or 1-40ft; Top: 1 40ft, 45ft, 48ft or 53ft container
- SA7 IBC Container only, Bottom: 2-20ft or 1-40ft; Top: 1 40ft, 45ft, or 48ft container; 53ft container can be loaded in the A and B units if the C unit has a 40ft or 45ft container loaded in it
- SA8 IBC Container and Trailer capability, Bottom: 2-20ft or 1-40ft container or 1-28ft trailer; Top: 1 40ft, 45ft, or 48ft container; 53ft container can be loaded in the A and B units if the C unit has a 40ft container
- SA9 IBC Container and trailer capability, Bottom: 2-20ft, 1-40ft, 45ft, 48ft or 53ft container; Top: 1 40ft, 45ft, 48ft , or 53ft container. Trailer: 2-28ft, 1-40ft, 1-45ft, 1-48ft, 1-53ft or 1-57ft
- SBO 5Well IBC Cars not otherwise classified--contact car owner
- SB1 5Well IBC 2-20ft or 1-40ft container(s) in end wells and 1-40ft container only in intermediate wells with 1-40ft, 45ft or 48ft container stacked on top of all wells
- SB2 5Well IBC 2-20ft or 1-40ft container(s) in all wells and 1-40ft, 45ft or 48ft container stacked on top of all wells
- SB3 5Well IBC 1-40ft or 45ft container in all wells and 1-40ft, 45ft, 48ft or 53ft container stacked on top of all wells
- SB4 5Well IBC 1-40ft, 45ft or 48ft container in all wells and 1-40ft, 45ft, 48ft or 53ft container stacked on top of all wells
- SB5 5 Well IBC 2-20ft or 1-40ft container(s) in end wells and 1-40ft or 45ft container in intermediate wells with 1-40ft, 45ft or 48ft container stacked on top of all wells and 53ft on A, B, D units if 40ft on C & E units
- SB6 5Well IBC 2-20ft or 1-40ft container(s) in end wells and 1-40ft, 45ft or 48ft container in intermediate wells with 1-40ft, 45ft or 48ft container stacked on top of all wells and 53ft containers stacked only on top of intermediate wells
- SB7 5Well IBC 2-20ft or 2-24ft or 1-40ft or 1-45ft or 1-48ft container(s) in all wells with 1-40ft or 1-45ft or 1-48ft or 1-53ft container stacked on top of all wells
- SB8 5Well IBC 2-20ft or 24ft or 1-40ft or 1-45ft or 1-48ft container(s) in the end wells and 1-40ft or 1-45ft or 1-48ft container in the intermediate wells with 1-40ft or 1-45ft or 1-48ft or 1-53ft stacked on top of all wells
- SB9 Swell IBC Container only, Bottom: 2-20ft or 1-40ft container; Top: 1
   40ft, 45ft, or 48ft container; a 53ft container could be loaded in
  the A, B, and D units if the C and E unit has a 40ft container
- SCO 5Well BLK Cars not otherwise classified--contact car owner

- SC3 5Well BLK 2-20ft or 1-40ft container(s) in end wells and 40ft containers only in intermediate wells with 40ft containers stacked on end wells and 40ft or 45ft containers stacked on intermediate wells
- SC4 5Well BLK 2-20ft or 1-40ft container(s) in all wells with 40ft or 48ft containers stacked on top of all wells
- SC5 5Well BLK 2-20ft or 1-40ft container(s) in all wells with 40ft, 45ft or 48ft containers stacked on top of all wells
- SC6 5Well BLK 1-40ft container only in end wells and 2-20ft or 1-40ft container(s) in intermediate wells with 40ft or 48ft containers stacked on top of all wells
- SC7 5Well BLK 1-40ft container only in end wells and 2-20ft or 1-40ft container(s) in intermediate wells with 40ft, 45ft or 48ft containers stacked on top of all wells
- SC8 5Well BLK 1-40ft container in all wells with 1-40ft or 1-45ft container stacked on top of all wells

- SC9 5Well BLK 2-20ft or 1-40ft container(s) in all wells with 1-40ft or 1-45ft container stacked on top of all wells
- SD1 5Well, IBC Container, Bottom: 1-40ft container; Top: 1 40ft, 45ft, or 48ft container; 53ft container can be loaded on A, B, D units when 40ft containers are in C & E units. No 20ft containers, no Trailers
- SD2 5Well, IBC Container, Bottom: End Units: 2-20ft, 1-40ft, 45ft container in well; Intermediate Units: 1-40ft or 45ft; Top: 1 40ft, 45ft, or 48ft container; 53ft container can be loaded on A, B, D units when 40ft containers are in C & E units
- SD3 IBC Container, Bottom: 1-40ft, 45ft, 48ft or 53ft container; Top: 1-40ft, 45ft, 48ft, or 53ft container. No 20ft containers, no Trailers
- SD4 5Well IBC 2-20ft or 1-40ft container(s) in end wells and 1-40ft container only in intermediate wells with 1-40ft, 45ft, or 48ft container stacked on top of all wells. 53ft on A, B, D units if 40ft on C & E units
- SD5 5Well IBC 2-20ft or 1-40ft container(s) in A Unit; 1-40ft container(s) in B Unit, 1-40ft or 1-45ft container in intermediate wells with 1-40ft, 45ft or 48ft container stacked on top of all wells. 53ft on A. B, D units if 40ft on C & E units
- SD6 5 Well BLK 2-20ft or 1-40ft container(s) in end wells and 40ft containers only in intermediate wells, with 40ft containers stacked on top of intermediate wells and 40ft or 45ft containers stacked on top of end wells
- SD7 5Well IBC 2-20ft or 1-40ft or 1-45ft or 1-48ft container(s) in the end wells and 1-40ft or 1-45ft or 1-48ft container in the intermediate wells with 1-40ft or 1-45ft or 1-48ft or 1-53ft stacked on top of all wells, with SGL TRLR trailer up to 53 ft long, hitched

#### Validation Rule for B288

- -Equipment with Mechanical Designation of FCC can only have Single Length Load Configurations of PT#, PB#, PC#, DT#, DB#, or DC#
- -Equipment with Equipment Descriptors of FCW or FCWA can only have Single Length Load Configurations of SA#, SB#, SC# or SD#
- -Equipment with Equipment Descriptors of FCL or FLCA can only have Single Length Load Configuration of QT#, QB#, or QC#

Stack Design Not Defined	B299
Stack Connection/Design Not Classified	<b>A</b>

Used in ETC Generation.

#### Permissible Values for B299

' Yes

# Truck Tonnage Capacity B300 Truck Capacity For Stack Cars Only

Used in ETC Generation.

#### Permissible Values for B300

70 70 Ton 100 100 Ton 125 125 Ton

### Validation Rule for B300

- Intermodal Truck Tonnage Capacity must equal 70 when the Connected Unit Count (A020) is blank and the Wheel Diameter (A294) equals 33 or less
- Intermodal Truck Tonnage Capacity must equal 100 when the Connected Unit Count (A020) is blank and the Wheel Diameter (A294) equals 36
- Intermodal Truck Tonnage Capacity must equal 125 when the Connected Unit Count (A020) is blank and the Wheel Diameter (A294) equals 38

Securement Type ETC Gen B302
Securement Type For ETC Gen

Used in ETC Generation.

Permissible Values for B302

BLK Bulkhead IBC

AEI High Temperature Tag B006
Indicates the equipment is equipped with a high temperature AEI tag

Permissible Values for B006

Y High Temperature Tag

Connected Unit Count A020

Indicates the number of units within an articulated or multi-unit equipment

Used in ETC Generation. Affects Rating.

#### Range of Values for A020

Minimum	Maximum
1	q

#### Validation Rule for A020

- -Connected Unit Count must equal the number of Unit Segments
- -Connected Unit Count must be reported for equipment with equipment descriptors of FCLA or FCWA
- -Unit Segment Component elements must not be reported if the Connected Unit Count is not reported
- -Connected Unit Count cannot be reported for equipment with equipment descriptors of FCL, FCW, or FCC
- -Unit Segment Component elements must be reported if Connected Unit Count is reported
- -Equipment Type Codes P---, Q-1-, and S-1- cannot have a Connected Unit Count

#### Intermediate Conn Style

R115

Indicates the method by which two or more pieces of equipment are connected

#### Permissible Values for B115

- **Articulated Connector**
- D Drawbar Connector

#### Validation Rule for B115

- -Intermediate Connector Style is required for multi-unit equipment
- -Intermediate Connector Style must not be reported for single unit equipment

#### Operating Brakes Mandatory

A182

The number of air brake control valves on the equipment (excludes hand brakes). One control valve consists of a service portion, emergency portion, and pipe bracket. Example: DB-60 control valve

#### Permissible Values for A182

1	2	3	4	5
6	7	8	9	

#### Validation Rule for A182

- -Operating Brakes must be reported for all equipment
- -Operating Brakes (A182) must be 1 for non-articulated equipment with an Axle Count (A024) equal to 4

#### NOTES:

• Excludes empty/load device, number 8 vent valve, and proportion valve.

#### **ECP Brake Type B327**

Indicates the type of electronic controlled pneumatic brake used on the equipment

#### Permissible Values for B327

- N Not Equipped
- Overlay Both ECP & Air Brake Ω
- Stand Alone ECP Only

#### Validation Rule for B327

-Equipment must have a value entered for ECP Brake Type if built or rebuilt after June 28, 2012

#### **ECP Brake Builder** B328

The manufacturer of the electronic controlled pneumatic brake used on the equipment

#### Permissible Values for B328

NYAB New York Air Brake

WABTEC WABT

#### Validation Rule for B328

-If ECP Brake Type (B327) is Stand Alone or Overlay then a value must be entered for ECP Brake Builder

-If ECP Brake Type (B327) is Not Equipped then ECP Brake Builder is not reportable

### Slack Adjuster Group **B538**

The slack adjuster group on the equipment per AAR Field Manual Rule #8 Value does not carry forward for Single Clone / Multi-Clone.

#### **Permissible Values for B538**

Α	Group A	В	Group B	С	Group C	D	Group D
Ε	Group E	F	Group F	G	Group G	Н	Group H
J	Group J	L	Group L	M	Group M	Ν	Group N
0	Group O	Р	Group P	Q	Group Q	R	Group R
1	Internal	2	Unequipped				

#### Validation Rule for B538

- Slack Adjuster Group is mandatory for all equipment built or rebuilt on or after January 1, 2016
- If Slack Adjuster Group is reported as "1" then Brake Cylinder Mount Type (B540) must be reported as "T"
- If Slack Adjuster Group is "1" or "2", then Slack Adjuster CID (B359) must not be reported.

#### NOTES:

• Permissible value of "1 - Internal" identifies special truck mounted internal slack adjuster within brake cylinder.

### **Brake Cylinder Mount Type**

Identifies the location of the brake cylinder

### Permissible Values for B540

**Body Mounted** 

**Truck Mounted** 

#### Validation Rule for B540

- Brake Cylinder Mount Type is mandatory for all equipment built or rebuilt on or after January 1, 2016

**Equipment Builder** 

A035

B540

Identifies the original manufacturer of the equipment

### Permissible Values for A035

#### **Data Specification Manual**

#### WARN Wabash National

#### **Validation Rule for A035**

- -Equipment Builder must be populated if the Built Date (BLDT) is July 1, 2010 or newer
- -Equipment built or rebuilt on or after July 1, 2010 cannot have a **Equipment Builder of Unknown**
- -Equipment with a Built Date (BLDT) on or after July 1, 2010 cannot have an Equipment Builder of OWNER RAILROAD.
- -Equipment Builder can have a value of MULT only if the equipment has multiple units.

#### **Builder Lot Code**

A unique identifier for a group of equipment built by one manufacturer under the same builder specification

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Validation Rule for B030

-Equipment built or rebuilt on or after June 28, 2012 must have a value for **Builder Lot Code** 

**Built Country** 

B031

B170

The country where the equipment was constructed

Data is Confidential.

#### Permissible Values for B031

CA Canada Mexico

US **United States** 

**Rebuilt Country** 

#### The country where the equipment was re-constructed

#### Permissible Values for B170

CA Canada MX Mexico

US **United States** 

**FRA Reflectorization** B096

Indicates the equipment owner assumes responsibility for applying reflectorization tape

### Permissible Values for B096

- Р Reflectorization Plan
- W Reflectorization Waiver

#### Validation Rule for B096

-Reflectorization is mandatory for all equipment after November 28, 2015.

Air Hose Arrangement	B524
The type of trainline air hose arrangement	

#### Permissible Values for B524

- S-424 Angle Cock Location
- В S-425 Angle Cock Location on Cars Equipped with AAR Type F Coupler
- С S-426 Angle Cock Location on Cars with Floating Sills
- D S-427 Angle Cock and Air Brake Hose Location on Cars with Excessive Overhang Preventing Compliance with AAR Standards
- Ε S-428 Angle Cock Location on Cars Equipped with AAR Type F Coupler and Cushioned Underframe
- F S-4003 (Former Standard)
- G S-4003x (Former Standard Retrofitted to Meet All Dimensions Except Height)
- Н S-4003-05 (Current Standard Train Line Arrangement for Cars with F-Shank Couplers)
- S-4021 Angle Cock and Brake Hose Location on Cars with EOCC (E and
- S-4021 Coupler Mounted Bracket End Arrangement 1
- S-4028 Train Line Arrangement with Displaceable Union on Cars with Κ EOCC and Couplers Not Exceeding 45 in. in Length
- L S-4029 Train Line Arrangement with Displaceable Union on Cars with EOCC and Couplers Exceeding 45 in. in Length
- Μ S-4030 Trolley Arrangement on Cars with EOCC and E-Shank Couplers

#### Validation Rule for B524

-Air Hose Arrangement must be reported for this equipment if it is Built or Rebuilt on or after April 22, 2014.

#### NOTES:

- If any of the following conditions apply, Air Hose Arrangement (B524) must be reported for cars Built or Rebuilt on or after April 22, 2014:
  - ° Draft Gear Type (B073) at any location is C or E.
  - ° Connected Unit Count (A020) is reported.
  - ° Outside Length (OSLG) is greater than or equal to 70 feet (840 inches).
  - The overhang is greater than 5 feet 6 inches (66 inches). Overhang is calculated as follows:
  - 0.5 \* (Outside Length, in inches, minus Truck Center Length, in inches, minus 31 inches)
  - $^{\circ}\;$  For all other equipment, reporting Air Hose Arrangement is optional.

#### 4-Pressure ABT Receiver Eqpd

Identifies if the equipment is equipped with a 4-pressure air brake test receiver

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B539

Ε Equipped

Ν Not Equipped

• An "E" will be system generated if a 4-Pressure ABT is reported on the equipment.

### **Feature**

Floor Material A104

Describes the type of construction material used for the equipment floor

#### Permissible Values for A104

- Composite Nailable (considered same as wood 05
- Composite Nailable, Reinforced (considered same as wood) 06
- 14
- 15 Other, Reinforced
- 19 Standard Steel
- 21 Steel Floor, (straight deck) without risers (F-8-)
- 23 Steel Nailable (includes alternate wood and steel floor
- Steel Nailable, Reinforced (includes alternate wood and steel floor 24
- 25 Standard Steel, Reinforced
- 27 Unknown
- 30 Wood
- 33 Wood, Double, Reinforced
- 34 Wood Floor with Steel Protective Plates (includes perforated steel)
- 35 Wood Floor, Reinforced, with Steel Protective Plates (includes perforated steel)
- Wood Floor, Reinforced 36

**Bridge Plate Type** Component (ICPSC)

Used in ETC Generation. Permissible Values for B029

#### Both Stub Bridge Plate & Portable Bridge Plate

Ρ Portable

Portable Brdge Plate Cap.

Portable Bridge Plate Capable Used in FTC Generation

Permissible Values for B284

**Bulkhead Type** B034

Identifies the type of bulkhead attached to the equipment

Value does not carry forward for Equipment Group Change.

=Mandatory

B029

**B284** 

#### Permissible Values for B034

Fixed with Flipper Fixed L

#### Validation Rule for B034

- -If Bulkhead Height Above Platform is set then Bulkhead Type must be set
- -If Bulkhead Top Width is set then Bulkhead Type must be set

#### Cost

**Original Cost** A184 The original manufacturer selling price

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A184

Minimum	Maximum	
0	9999999	

## Validation Rule for A184

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported.
- -Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost
- -Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

#### NOTES:

- Original Cost is never altered. It is the cost of the equipment to the original owner.
- For railroad-marked cars, report in US dollars the original ledger value of the original owner For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24
- The original cost is used in the settlement of AAR Interchange Rule 107 Office
- For connected unit cars report the total original cost for all units in the set. Numeric, applicable to all railroad-marked cars Also, applicable to privately marked covered hopper (LO) cars.
- Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

A150 **Ledger Value** 

#### The sum of original cost and additions & betterments

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

#### Range of Values for A150

Minimum	Maximum
Λ	9999999

#### Validation Rule for A150

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

Total A&B A003

System generated sum of all reported amounts in A&B Amount (A317), in US

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A003

Minimum	Maximum
0	99999999

#### NOTES:

- For railroad-marked cars, report the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not be used to report Ledger Value.
- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.

- o Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
- Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.
- For connected unit cars report the total Truck Location A for all units in the

Ind for Pos/Neg Total A&B

A128

A code indicating the positive or negative adjustment to the original cost of the

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A128

Negative Positive

A&B Pos/Neg Ind

A316

A code indicating the positive or negative adjustment to the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A316

Negative Positive

#### Validation Rule for A316

- -When entering an individual Addition & Betterment, you must enter a value
- -The A&B Indicator is required when Additions & Betterments are reported.
- -The A&B Indicator must not be reported if Additions & Betterments are not reported.

**A&B Amount** A317

The amount of the individual addition and betterment added to or subtracted from the original cost of the equipment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A317

Minimum	Maximum
1	999999

### Validation Rule for A317

-When entering an individual addition & betterment; A&B Date Done (A319), A&B Type (A318), A&B Pos/Neg Ind (A316), and A&B Amount (A317) must be reported

**A&B Date Done** Δ319

#### The date of the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

### Range of Values for A319

Minimum	Maximum
1/1/1900	12/31/9999

### Validation Rule for A319

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -Addition and Betterment Date Done cannot be earlier than Built Date
- -Additions & Betterments Date Done cannot be later than today's date.

**A&B Type** A318 The type of individual addition and betterment as defined by Rule 107

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

### Permissible Values for A318

**FLLD** Other permanently installed loading equipment used on flat cars

**GNRL** General - Capitalized Additions and Betterments

INIT Initial load of historical A&B amount as of Umler 4.6 implementation date

#### Validation Rule for A318

- -For each equipment, only one Individual A&B Type can have a value of INIT.
- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.

### Car Management

Pool Number P001

Unique number used to indicate the grouping of equipment for a particular purpose

Used for Transportation Codes. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add Back.

Pool Control TCPC

#### **Pool Control**

System Generated Field. Used for Transportation Codes. This element is not eligible for Input, Output or Query.

#### NOTES:

• For further explanation reference Appendices C and E.

User Routing Instructions TCUR

The routing instruction reported by the user

Used for Transportation Codes.

#### **Permissible Values for TCUR**

- 2 Trailer Service Rule 2
- G Contaminated commodity service
- M Mark canceled
- O Owner requested return
- U Unassigned equipment

#### NOTES:

For further explanation reference Appendix E.

Umler Transportation Code TCOD
The type of assigned service, empty routing or restriction of the equipment

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

Transportation Cond Code TCCD

The AAR or FRA interchange restriction code

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

Mechanical Restriction TCME

User reported or system generated type of mechanical restriction

Used for Transportation Codes.

#### **Permissible Values for TCME**

- S Scrap
- X AAR Interchange Restriction
- Y FRA Interchange Prohibited

#### NOTES:

• For further explanation reference Appendix D.1

Mech Restriction Reason TCMR
The explanation of the Mechanical Restriction (TCME)

Used for Transportation Codes.

#### Permissible Values for TCMR

A Restricted Due to Age (Over 40-AAR, Over 50-FRA)

- B Restricted Due to Air Brakes
- C Restricted Due to Axles
- D Restricted Due to Couplers and Couplers Parts
- F Restricted Due to Couplers Yokes
- G Restricted Due to Draft Gears
- J Restricted Due to Journal Bearing and Journal Lubrication
- N Restricted Due to Trucks
- P Restricted Due to Truck Side Frames
- T Restricted Due to Trucks Bolsters
- U Restricted by AAR or Owner
- W Restricted Due to Wheels
- X Restricted Due to Scrap or Early Warning
- Z Restricted Due to Umler Conflict (Not Valid for User Input)

#### NOTES:

- For further explanation reference Appendix D.2.
- The assignment of the Transportation Codes S\_ SX, XA, XZ and YA generate
  the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and
  mileage rate.

Sys Gen Routing Inst

TCGR

The routing instruction generated by the system

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.5.

Loading Authority Fleet Status B597

Identifies when a car is listed on a fleet in the Loading Authority application

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### **Permissible Values for B597**

- Y Yes
- S Suspended

#### NOTES:

- When equipment is on a fleet the Loading Authority (LA) application will update the flag to 'Y – Yes'. When equipment is removed from a fleet the LA application will remove the 'Y – Yes'.
- When equipment is on a LA fleet that is suspended the LA application will
  update the flag to 'S Suspended'. When the equipment is on a LA fleet that
  is no longer suspended the LA application will update the flag to 'Y Yes'.

### **Train Service**

Restricted Speed Empty

B180

Describes the maximum restricted speed the equipment can travel when empty

Range of Values for B180

Minimum	Maximum
5	95

**Restricted Speed Loaded** 

B181

Describes the maximum restricted speed the equipment can travel when loaded

Range of Values for B181

Minimum	Maximum
5	95

Shove Car to Rest B189
Identifies the car must be moved to rest by locomotive

Permissible Values for B189

Y Yes

Shove Adj. Car to Rest

B188

Identifies the adjacent car must be shoved to rest by locomotive

#### Permissible Values for B188

Yes

Train Position Sensitive	B211
to discuss the control of the form of the first of the control of	

#### Indicates there is a physical reason, limiting its position on a train

#### Permissible Values for B211

Yes

B277 **End of Train Only** 

Indicates the equipment must be placed at the end of the train (including per

#### Permissible Values for B277

Yes

Check Trailing Tonnage	B044
Indicates the equipment has restrictions on trailing tonnage	e

#### Permissible Values for B044

Yes

Curve Negotiate Exception	B178
Describes the requirement for negotiating a curve	

#### Permissible Values for B178

- Restrictive Curve Negotiability, Section 2.1.4 of M-1001
- В Does not meet all Chapter XI Curving Requirements

Cooper Rating Exception	B273
Describes the cooper rating (weight distribution model of the equ	ipment), for
use in movement across bridges	

#### Permissible Values for B273

- **Excessive Cooper Rating**
- В Cooper Rating in Excess of E66

Clearance Exception	B275
Describes equipment containing nonstandard dimension	

#### Permissible Values for B275

- Excessive Outside Extreme Height (A185)
- Excessive Outside Extreme Width (A186)
- C Lower Guides for Loading High Cube Containers
- D All other unique clearance issues

Loaded Net Braking Ratio	B551
Indicates calculated minimum loaded net braking ratio per AAR Spe	cifications in
1 1 11 11 11 11 11	

place on built or rebuilt date (in percent). System Generated Field. This element is not eligible for input.

#### Permissible Values for B551

- -11.0
- -8.5

#### NOTES:

- Loaded Net Braking Ratio is determined as follows:
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Loaded Net Braking Ratio will be set to blank.
  - o If Built Date (BLDT) is greater than or equal to 1/1/1972 and less than 1/1/2004, than loaded Net Braking Ratio is 8.5%.
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is greater than or equal to 1/1/2004, then Loaded Net Braking Ratio is 11.0%.

Owner-Provided Loaded Net Braking Ratio	B552
Indicates an alternate minimum loaded net braking ratio provided by owner (in	
nercent)	

Range of Values for B552		
Minimum	Maximum	
8.5	14.0	
NOTES:		

=Mandatory

▲=Used in ETC Generation

**Empty Braking Ratio** 

Braking Ratio (B551).

o Rebuilt Date (RBDT) o Gross Rail Load/Weight (A266)

in PTC stopping distance calculations.

o Equipment Type Code (UMET)

Empty/Load Device Eqpd (B075)

Loaded Net Braking Ratio to reset to blank:

**B**553

Indicates calculated empty braking ratio per AAR Specifications in place on built or rebuilt date (in percent).

· Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net

When reported, the Owner-Provided Loaded Net Braking Ratio will be used

A change in value for the following elements will cause the Owner-Provided

System Generated Field. This element is not eligible for input.

#### Range of Values for B553 Minimum Maximum 15.0 38.0 NOTES:

- Empty Braking Ratio is determined as follows:
- o If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Empty Braking Ratio will be set to blank.

Owner-Provided Empty Braking Ratio	B554
Indicates an owner supplied alternate empty braking ratio (in percent).	

Range of Values for B554	
Minimum	Maximum
15.0	38.0

#### NOTES:

- Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net Braking Ratio (B551).
- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - Rebuilt Date (RBDT)
  - o Gross Rail Load/Weight (A266)
  - o Equipment Type Code (UMET)
  - o Empty/Load Device Eqpd (B075)

### Truck Components

Axle Spacing Distance Mandatory	B020
The distance between axle centers on the same truck	• _

#### Affects Rating.

- 99 Axle Space Unknown

Truck Axle Count	B252
The number of axles per truck	
Pango of Values for B2E2	

### Range of Values for B252

Minimum	Maximum
1	4

#### Validation Rule for B252

- Sum of Truck Axle Counts must equal Axle Count (A024)

Journal Size Mandatory	A147
The size of the journal bearing	•
Affects Rating	

#### Permissible Values for A147

Α	3-3/4 X 7	В	4-1/4 X 8	C	5 X 9
D	5-1/2 X 10	Ε	6X11	F	6-1/2 X 12
G	7 X 12	Н	7 X 14	K	6-1/2X9
M	7 X 9				

#### Validation Rule for A147

- -4-axle equipment with Journal Size B and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 103,000 lbs.
- -4-axle equipment with Journal Size C and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 142,000 lbs.
- -4-axle equipment with Journal Size D and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 177,000 lbs.
- -4-axle equipment with Journal Size E and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 220,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 263,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 2, must have Gross Rail Load (A266) of 286,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 3, must have Gross Rail Load (A266) of 286,000 lbs.
- -4-axle equipment with Journal Size G, K, or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1, must have Gross Rail Load (A266) of 286,000 lbs.
- -4-axle equipment with Journal Size G, K, or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 315,000 lbs.
- -4-axle equipment with Journal Size G, K, or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1, must have Gross Rail Load (A266) of 286,000 lbs.
- -4-axle equipment with Journal Size B and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 103,000 lbs.
- -4-axle equipment with Journal Size C and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 142,000 lbs.
- -4-axle equipment with Journal Size D and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 177,000 lbs.
- -4-axle equipment with Journal Size E and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 220,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 263,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 2, must have Gross Rail Load (A266) of 286,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 3, must have Gross Rail Load (A266) of 286,000 lbs.

- -4-axle equipment with Journal Size G, K, or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1, must have Gross Rail Load (A266) of 286,000 lbs.
- -4-axle equipment with Journal Size G, K, or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 315,000 lbs.

#### NOTES:

- A, B and C Journal Classes are prohibited in Interchange per Rule 90.B.4
- A, B, and C Journal Sizes are restricted from interchange and will receive the Mechanical Restriction  $\ensuremath{\mathsf{XJ}}$

#### Wheel Diameter Mandatory A294 The diameter of the wheels

#### Permissible Values for A294

33 Inches 36 36 Inches 38 Inches

#### Validation Rule for A294

- -Equipment with a Qualification for Increased Gross Rail Load of 1 and Journal Size (A147) of G or M must have a Wheel Diameter of 38
- Equipment with Qualification for Increased Gross Rail Load (B344) of 1, and Journal Size (A147) of K, must have Wheel Diameter of 36
- -If Connected Unit Count (A020) is not reported, different Wheel Diameters cannot be reported

Stability Device Equipped	B199
Indicates a stability device is present on the truck	_

#### Affects Rating.

#### Permissible Values for B199

Yes

Bolster Component ID	B351
Bolster Component ID from Component Registry	

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Sideframe Component ID	B352
Side Frame Component ID from Component Registry	

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Wheelset Component ID B350 Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for A057

- -If Rotary Coupler Style is reported, then Coupler Code must be a rotary coupler.
- -If Coupler Code is a rotary coupler, then Coupler Style must be R (Rotary).
- -Coupler Code of Type E Obsolete (Rule 16) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type E/F Obsolete (Rule 17) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type F Obsolete (Rule 18) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of FROTARY or EFROTARY cannot be reported for cars Built or Rebuilt on or after August 12, 2014.

#### NOTES:

- Obsolete: All Type D couplers are obsolete and should report code DOBS; cars with this coupler code will be restricted in interchange as discussed below
- Unknown: If the coupler code is unknown or if the code stamped on the coupler is illegible, the code BUNK FUNK, EFUNK, or LOCOUNK should be reported.
- Special: Codes ESPEC, FSPEC, and EFSPEC have been created to decline coupler bodies that have been manufactured specifically for the equipment owner and are not listed in the attached table.
- The codes FROTARY and EFROTARY cannot be reported for equipment Built or Rebuilt since August 12, 2014.

Coupler Style Mandatory	B058
Describes the basic coupler design of the equipment	•

### Affects Rating.

#### Permissible Values for B058

B Bottom Shelf D Double Shelf P Plain R Rotary

#### Validation Rule for B058

- -If Draft System Type (B073) is H (Hydraulic) then Coupler Style (B058) cannot be reported as M (Solid Drawbar) or L (Rotary Drawbar)
- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- -If Draft System Type (B073) of Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported
- -If Draft System Type (B073) is E then Coupler Style (B058) cannot be reported as L or R

Inches of Travel	B061
The number of inches a draft system will travel	<u>-</u>

#### Affects Rating.

# Range of Values for B061 Minimum Maximum 1 30

### Validation Rule for B061

- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- -If Draft System Type (B073) of Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported
- -Inches of Travel cannot be greater than 20 for equipment with a Built Date (BLDT) on or after January 1, 1974

Draft System Type Mandatory	B073
Describes the draft gear/underframe cushion type	•

#### Affects Rating.

#### Permissible Values for B073

C Cushioning at Center of Car (COC)

- Cushioning at End of Car (EOC)
- S Standard Draft Gear
- X Devices with less than 6 inches buff travel approved under AAR Standard S-060
- Y Devices with 6 to 10 inches of buff travel approved under AAR Standard \$-060

#### **Validation Rule for B073**

- If Draft System Type (B073) is Standard Draft Gear (S), Inches of Travel (B061) cannot be reported
- If Draft System Type (B073) is reported as C, E, X, or Y then Inches of Travel (B061) must also be reported
- If Draft System Type (B073) of X, or Y is reported then Draft Gear Group/Cushion Unit Pocket (B562) cannot be reported
- If Draft System Type (B073) X is reported, the Inches of Travel (B061) value must be greater than or equal to 1 and less than 6
- If Draft System Type (B073) Y is reported, the Inches of Travel (B061) value must be greater than or equal to 6 and less than or equal to 10
- -If Draft System Type (B073) is S then Draft Gear Group/Cushion Unit Pocket (B562) may only be A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z (AAR Rule 21)
- -If Draft System Type (B073) is E then Draft Gear Group/Cushion Unit Pocket (B562) may only be EOC-1,EOC-1D, EOC-1B, EOC-2, EOC-2D, EOC-2B, EOC-3, EOC-3B,EOC-4, EOC-4B, EOC-5, EOC-5D, EOC-5B, EOC-6, EOC-6D, EOC-6B, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-8F, EOC-9, EOC-9B, EOC-9D, EOC-9E, EOC-10, EOC-10D, EOC-10B, EOC-10F, EOC-11, EOC-11D, EOC-11B,EOC-12, EOC-12D, EOC-12B, EOC-13, EOC-13B, EOC-14, EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16, EOC-16D, EOC-16B, EOC-17, EOC-17D, EOC-17B, EOC-18, EOC-18D, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-23, EOC-23B, EOC-24, EOC-24B, EOC-25E, EOC-26B, EOC-26F, or EOC-27D, or EOC-27E (AAR Rule 59)

#### **Draft Gear Group/Cushion Unit Pocket**

B562

Draft Gear Group/Cushion Unit Pocket value as listed in AAR Field Manual Interchange Rule 21 and 59

Carry forward for Single Clone / Multi-Clone / Restencil / Add-Back / Equipment Group Change.

Permissible Values for B562EOC-1,EOC-1D, EOC-1B, EOC-2, EOC-2D, EOC-2B, EOC-3, EOC-3B,EOC-4, EOC-4B, EOC-5, EOC-5D, EOC-5B, EOC-6, EOC-6D, EOC-6B, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-8F, EOC-9, EOC-9B, EOC-9D, EOC-9E, EOC-10, EOC-10D, EOC-10B, EOC-10F, EOC-11D, EOC-11D, EOC-11D, EOC-12B, EOC-13, EOC-13B, EOC-14, EOC-11D, EOC-15D, EOC-15D, EOC-15B, EOC-16, EOC-16D, EOC-16B, EOC-17, EOC-17D, EOC-17B, EOC-18B, EOC-19, EOC-19B, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-23, EOC-23B, EOC-24, EOC-24B, EOC-25E, EOC-26B, EOC-26F, EOC-27D, EOC-27F, COC-17, COC-3, COC-4, COC-5, COC-6, COC-7, COC-8 (AAR Rule 59).

#### A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, Z (AAR Rule 21).

### Validation Rule(s) for B562

- -Draft Gear Group/Cushion Unit Pocket (B562) is mandatory for equipment built on or after June 13, 2019, unless Draft System Type (B073) is reported as X or Y
- -If Draft Gear Group/Cushion Unit Pocket (B562) is not equal to A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z, then Cushion Unit Type (B563) must be populated
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-6, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-9, EOC-9B, EOC-9D, EOC-10, EOC-10B, EOC-10D, EOC-14, EOC-14B, EOC-18D, EOC-23, EOC-23B, EOC-24, EOC-25E, EOC-26B, or EOC-27D then the Cushion Unit Type (B563) must be 1
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-9E, EOC-26F, or EOC-27E, then the Cushion Unit Type (B563) must be 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-11, EOC-12, EOC-13, EOC-13B, EOC-15, EOC-15B, EOC-15D, EOC-17, EOC-17B, EOC-17D, EOC-18, EOC-18B, EOC-19, EOC-19B, EOC-20B, EOC-21, EOC-21B, EOC-22B, EOC-22B, EOC-24B, COC-3, COC-5, or COC-7 then the Cushion Unit Type (B563) must be 1 or 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-8F or EOC-10F then the Cushion Unit Type (B563) must be 2 or 3
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-5, EOC-5B, EOC-5D, EOC-6B, EOC-6B, EOC-6D EOC-11B, EOC-11D, EOC-12B, EOC-12D, or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-16D, or COC-1 then the Cushion Unit Type (B563) must be 1, 2, or 4

# **Umler**<sup>®</sup>

#### **Data Specification Manual**

- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D, EOC-3, EOC-3B, EOC-4, EOC-4B, or COC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, or 4
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1, EOC-1B, EOC-1D, or EOC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or S
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-8 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or 5
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1D, EOC-2,EOC-2D, EOC-2B, EOC-3, EOC-3B, EOC-5, EOC-5D, EOC-5B, EOC-6D, EOC-7, EOC-7B, EOC-9, EOC-9B, EOC-9D, EOC-9E, EOC-10D, EOC-11, EOC-11B, EOC-11D, EOC-12D, EOC-14,EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16D, EOC-17D, EOC-23, EOC-23B, EOC-27D, or EOC-27E then the Inches of Travel (B061) must be 10
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-19, EOC-19B, EOC-22, EOC-22B, or EOC-25E then the inches of travel must be 12
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-20 or EOC-20B then the Inches of Travel (B061) must be 14
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1B, EOC-4, EOC-4B, EOC-6, EOC-6B, EOC-8, EOC-8B, EOC-8F, EOC-10, EOC-10B, EOC-10F, EOC-12, EOC-12B, EOC-13, EOC-13B, EOC-17, EOC-17B, EOC-18D, EOC-18B, EOC-21, EOC-21B, EOC-24, or EOC-24B then the Inches of Travel (B061) must be 15
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-2, COC-3, COC-4, COC-5, COC-6, or COC-8 then the Inches of Travel (B061) must be 20
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 1 or 2, then the Inches of Travel (B061) must be 20
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 4, then the Inches of Travel (B061) must be 18
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 2, then the Inches of Travel (B061) must be 20
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 1, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1 then the Inches of Travel (B061) must be 10, 12, or 15
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-26, then the Inches of Travel (B061) must be 18

#### Note:

#### **Cushion Unit Type**

B563

Cushion Unit Type value as listed in AAR Field Manual Interchange Rule 21 and 59

Carry forward for Single Clone / Multi-Clone / Restencil / Add-Back / Equipment Group Change.

#### Permissible Values for B563

- 1 Type 1
- 2 Type 2
- 3 Type 3
- 4 Type 4
- 5 Type 5
- S Type S

#### Validation Rule(s) for B563

- Cushion Unit Type (B563) is mandatory for equipment built on or after June 13, 2019.
- -If Draft Gear Group/Cushion Unit Pocket (B562) is not equal to A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z, then Cushion Unit Type (B563) must be populated.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-6, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-9, EOC-9B, EOC-9D, EOC-10, EOC-10B, EOC-10D, EOC-14, EOC-14B, EOC-18D, EOC-23B, EOC-24B, EOC-25E, or EOC-26B then the Cushion Unit Type (B563) must be 1.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-9E, EOC-26F, or EOC-27E, then the Cushion Unit Type (B563) must be 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-11, EOC-12, EOC-13, EOC-13B, EOC-15, EOC-15B, EOC-15D, EOC-17, EOC-17B, EOC-17D, EOC-18, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-24B, COC-3, COC-5, or COC-7 then the Cushion Unit Type (B563) must be 1 or 2.

- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-8F or EOC-10F then the Cushion Unit Type (B563) must be 2 or 3.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-5, EOC-5B, EOC-5D, EOC-6, EOC-6B, EOC-6D EOC-11B, EOC-11D, EOC-12B, EOC-12D, or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-16D, or COC-1 then the Cushion Unit Type (B563) must be 1, 2, or 4.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D, EOC-3, EOC-3B, EOC-4, EOC-4B, or COC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, or 4.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1, EOC-1B, EOC-1D, or EOC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or S.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-8 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or 5.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 1 or 2, then the Inches of Travel (B061) must be 20.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 4, then the Inches of Travel (B061) must be 18
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 2, then the Inches of Travel (B061) must be 20.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 1, then the Inches of Travel (B061) must be 30.

Reference AAR Field Manual Interchange Rule(s) 21 and 59.

#### **Coupler Component ID**

B353

### Coupler Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

### **Cushioning Unit Component ID**

Component ID from Component Registry

B361

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

### **Unit Segment Components**

### Unit Equipment Group

A307

### Describes the equipment type of the platform

#### Permissible Values for A307

BOXC Box Car FLAT Flat Car GOND Gondola HOPP Hopper IFLT Intermodal Flat TANK Tank Car

VFLT Vehicular Flat

### Validation Rule for A307

- -Unit Equipment Group cannot be reported if the Connected Unit Count (A020) is not reported
- -Unit Equipment Group can only be reported if Connected Unit Count (A020) is reported

#### **Unit Tare Weight**

A299

The unit segment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

### Range of Values for A299

Minimum	Maximum
23000	120000

**Validation Rule for A299** 

- -Unit Tare Weight must not be reported if the Connected Unit Count (A020) is not reported
- -Unit Tare Weight must be reported if Connected Unit Count (A020) is reported
- -Unit Segment Tare Weights must add up to the Total Tare Weight (A259)
- -Unit Tare Weight (A299) value must be reported to the nearest 100

#### **Unit Load Limit** A300

The maximum permissible weight of the commodity that can be loaded into the unit segment, reported in pounds

#### Range of Values for A300

Minimum	Maximum
70000	300000

#### Validation Rule for A300

- -Unit Load Limit can not be reported if the Connected Unit Count (A020) is not reported
- -Unit Load Limit must be reported if Connected Unit Count (A020) is reported
- -Unit Segment Load Limits must add up to the Load Limit (LDLT)

Lower Load Width	B506
Allowable Lower Load Widths (ICPSC-II)	

#### Permissible Values for B506

8 Ft (96 in) Container Only 80 86 8 Ft 6 in (102 in) Container Only Both 8 ft and 8 ft 6 in Containers BB

Unit Inside Length	A301
The inside length of each unit segment	<b>A</b>

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A301

Minimum	Maximum
20 ft 0 inches	99 ft 3 inches

#### Validation Rule for A301

- -Unit Inside Length can only be reported if Connected Unit Count (A020) is
- -Unit Inside Length must be reported if Connected Unit Count (A020) is reported
- -Unit Inside Length for Flats other than Vflats must be greater than or equal to 20 feet.
- -Unit Inside Length for Flats and IFlats must be less than or equal to 99 feet 4 inches.

Cont Load Restrictions	B509
Container Load Limit Restrictions (ICPSC-II)	

Flat Rack Capable	B510

#### Flat Rack Capable (ICPSC-II) Permissible Values for B510

- 1 Flat Rack can be Stacked on this Platform
- 2 2 Flat Racks can be Stacked on this Platform
- 3 Flat Racks can be Stacked on this Platform 3
- 4 Flat Racks can be Stacked on this Platform
- 5 5 Flat Racks can be Stacked on this Platform
- 6 Flat Racks can be Stacked on this Platform 6
- 7 Flat Racks can be Stacked on this Platform
- 8 8 Flat Racks can be Stacked on this Platform
- 9 9 Flat Racks can be Stacked on this Platform
- No Flat Racks can be Stacked on this Platform

**B128** Lower Clearance Outline Three measurements that describe the lower position of the platform that are free of restrictions: 1) from cone point to bottom of restriction, 2) length of restriction, 3) width of restriction; Component of Unit Segment (ICPSC)

#### Permissible Values for B128

- Well does not meet Standard Clearance
- MSRP standard not developed Χ
- Well meets or exceeds Standard Clearance

#### Hitches per unit B140 Number of Trailer Hitches per car?; Component of Unit Segment (ICPSC)

#### Permissible Values for B140

- No Hitches on this Platform n
- 1 1 Hitch on this Platform
- 2 2 Hitches on this Platform
- 3 3 Hitches on this Platform
- 4 Hitches on this Platform
- 5 Hitches on this Platform
- 6 6 Hitches on this Platform
- 7 7 Hitches on this Platform 8 8 Hitches on this Platform
- 9 Hitches on this Platform 9

#### **CONT Loading Cap** A054

#### Container Loading Capacity C1

#### Permissible Values for A054

- One 40 ft Container 1
- 2 One 40 ft Container or Two 20 ft Containers
- 3 Two 40 ft Containers Stacked
- Two 40 ft Containers Stacked or Two 20 ft Containers and One 40 ft 4 **Container Stacked**
- 5 One 35 FT Container
- 6 One 45 ft Container
- One 40 ft and One 45 ft Container Stacked 7
- 8 One 40 ft and One 48 ft Container Stacked
- 9 Two 48 ft Containers Stacked
- Α Two 45 ft Containers Stacked
- В One 45 ft and One 48 ft Container Stacked
- С Two 35 ft Containers Stacked
- D Two 20 ft Containers-Stacked and One 40, 45 or 48 ft Container Stacked
- Ε Two 20 ft Containers Stacked and One 40 or 48 ft Container Stacked
- F Two 20 ft or One 40 ft and One 40, 45 or 48 Container Stacked
- G One 40 ft Container and One 40, 45 or 48 Container Stacked
- One 40 ft Container or 45 ft
- One 40 ft or 45 or 48 ft Container and One 40, 45 or 48 ft Container Stacked
- ı One 48 ft Container and One 40, 45, 48 or 53 Container Stacked
- Κ Two 20 ft Containers or One 40 or 45 ft and One 40, 45 or 48 ft Container Stacked
- One 45 ft Container and One 40, 45, 48 or 53 ft Container Stacked L
- Two 20 ft Containers or One 40 ft and One 40 or 48 ft Container Stacked

- Q Two 20 ft or 28 ft Containers or One 40, 45, 48 or 53 ft and TWO 20 ft or 28 ft Containers or One 40, 45, 48 or 53 ft Container Stacked
- One 40 ft or 45 or 48 ft Container and One 40, 45, 48, or 53 ft **Container Stacked**

#### Validation Rule for A054

- -Unit Container Loading Capacity is only applicable to FCA Equipment -Unit Container Loading Capacity is only applicable to Articulated cars
- **Trailer Loading Capacity** A272

### Trailer Loading Capacity C1

#### Permissible Values for A272

- 1 One 40 Ft Trailer
- 2 One 40 to 45 Ft Trailer
- 3 One 40 to 48 ft Trailer
- 4 One 40 to 50 ft Trailer
- 5 One 26 to 40 ft Trailer
- 6 26 to 45 ft Trailer
- 7 26 to 48 ft Trailer
- 8 26 to 50 ft Trailer
- 9 40 to 53 ft Trailer
- A 28 to 31 ft Trailer
- B 48 ft Well, Two 28 ft Trailers, up to 53 ft Single with Nose Extended Over Hitches, Intermediate - 53 Ft and Kingpin-Axle Length not Greater than 45 ft

#### Validation Rule for A272

- -Unit Trailer Loading Capacity is only applicable to FCA Equipment
- -Unit Trailer Loading Capacity is only applicable to Articulated cars

Number of Handbrakes B138

#### Number of Handbrakes (ICPSC)

#### Tambér et manazranes (rer s

- Permissible Values for B138

  1 Car has One Hand Bra
- Car has One Hand BrakeCar has Two Hand Brakes
- 3 Car has Three Hand Brakes
- 4 Car has Four Hand Brakes
- 5 Car has Five Hand Brakes
- 6 Car has Six Hand Brakes
- 7 Car has Seven Hand Brakes
- 8 Car has Eight Hand Brakes
- 9 Car has Nine Hand Brakes

Circus Loading Method B517

### Intermodal Flat Loading Method Circus (ICPSC-II)

Permissible Values for B517 N No Y Yes

Side Loading Method B518

### Intermodal Flat Loading Method Side (ICPSC-II)

Permissible Values for B518 N No Y Yes

Inter-Box Securement B113

Type of securement device used to connect the upper container to the lower container

#### Permissible Values for B113

IA IBC Automatic

IM IBC Manual

IS IBC Semi-Automatic

#### Validation Rule for B113

- -Stack Cars, with an Equipment Type Code (UMET) of S\_ \_ \_, that have a Built Date (BLDT) or Rebuilt Date (RBDT) on or after April 1, 2016 must report Inter-Box Securement
- -Inter-Box Securement cannot not be reported for Light Weight and Conventional Intermodal Cars with Equipment Type Codes (UMET) of Q\_\_\_ and P\_\_\_

### IFLT 20ft Container Lmt

B548

Indicates the maximum weight 20 foot container that a unit can carry, when all 20 foot container positions on the car are simultaneously loaded with 20 foot containers at their maximum weights

#### Permissible Values for B548

0 Not Equipped 37500 37,500 lbs.

ion ivian	uui
44800	44,800 lbs.

52900 52,900 lbs.

57500 57,500 lbs.

61500 61,500 lbs.

64000 64,000 lbs.

67200 67,200 lbs.

71650 71,650 lbs.

75000 75,000 lbs. 79370 79,370 lbs.

#### Validation Rule for B548

- -IFLT 20 ft Container Lmt must not exceed half the Unit Load Limit (A300) reported.
- -IFLT 20 ft Container Lmt should be populated when Single Length Loading Configuration (B288) is listed as DB1, DB2, DB3, DC1, DC2, DC3, DT1, DT2, DT3, DT4, DT5, DT6, PC1, PC2, PT1, PT2, PT3, PT4, PT5, PT6, QB1, QB2, QB3, QC1, QC2, QT1, QT2, QT3, QT4, QT5, QT6, QT7, QT8, SA1, SA2, SA3, SA4, SA5, SA6, SA7, SA8, SA9, SB1, SB2, SB3, SB4, SB5, SB6, SB7, SB8, SB9, SC1, SC2, SC3, SC4, SC5, SC6, SC7, SC8, SC9, SD1, SD2, SD3, SD4, or SD5 and Built/Rebuilt on/after September 20, 2018.

#### NOTES:

- If the desired 20 foot Container Limit is not an available choice, select the closest value that does not exceed your 20 foot Container Limit.
- Listing zero is a permissible value is applicable dependent on the loading configuration
- If your Single Length Load Configuration (B288) states the IFLT is designed to carry 20 foot containers, this element (B548) must be reported using the correct weight value based on equipment owners' specification.

#### **IFLT 20 Ft Cont Capable**

B549

Identifies if the unit segment is capable of loading 20 foot containers based on the Single Length Loading Configuration (B288)

System Generated Field.

#### Permissible Values for B549

Y Yes

N No

#### **Data Specification Manual**

## General **USCD** Status Code Mandatory Identifies the current operational state

Does not Carry Forward.

#### **Permissible Values for USCD**

ACTIVE INACTIVE 1

Ρ PRE-REGISTERED

#### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-Registered.
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID	0001
The equipment stenciled number	

#### Validation Rule for 0001

- -Equipment Number must not be larger than 6 digits (i.e., 999999)
- NOTES:
- Equipment ID includes the mark and number stenciled on the equipment. Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD999999)
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record ensure, that Prior Equipment ID (PRID) is reported, unless the equipment is new.

Mechanical Designation Mandatory	UMMD
Equipment description without physical dimensions	•

Used for Transportation Codes.

#### **Permissible Values for UMMD**

FΑ Flat-Vehicular MWVF MoW - VFlat

Equipment Type Code	UMET
An alpha numeric code that describes the physical attributes of equip	ment

System Generated Field. This element is not eligible for Input.

#### NOTES:

• Please Refer to Appendix I for More information Regarding ETC Generation

Maint of Way Service Type	B403
Identifies equipment Maintenance Of Way function	

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B403

C2 Crane / Boom Support Car

Flat-Wheel Sets F4

T4 Training Car

T8 Track Geometry Car

#### Validation Rule for B403

- Maint of Way Service Type can only be listed on records where the Equipment Group (0002) or Pseudo Equipment Group (B547) is listed as MISC

Built Date Mandatory	BLDT
The date the construction of the equipment is complete	•

Data is Confidential. Used for Transportation Codes. Affects Rating. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for BLDT

Minimum	Maximum
1/1/1900	12/31/9999

Validation Rule for BLDT

- -Built Date must be within the last 99 years
- -Built Date must not be in the future for equipment in Active Status
- -Prior and target equipment's Built Date (BLDT) must match for restenciling
- -Built Date cannot be updated within 30 days of the End of Service Date (B078)

#### NOTES:

- · Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

Rebuilt / ILS Date RRDT

The date the re-construction of the equipment is complete

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

#### Range of Values for RBDT

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for RBDT

- -Rebuilt/Increased Life Service Date must be after the Built Date (BLDT)
- -Rebuilt Date must not be more than 70 years after the Built Date (BLDT)
- -Rebuilt Date is required for Extended Service Code (A096) 1, 2, or 3 for Increased Life Service
- -Rebuilt Date is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years of service
- -If Rebuilt Date is reported then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life Service

- Railroad cars -- applicable only to cars meeting status as provided in both STB Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office Manual.
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt Date unless car has been approved by the AAR.

**Rebuilt Flag** RRFI Identifies the equipment is nearing its end of life cycle

Data is Confidential. System Generated Field. This element is not eligible for Input

#### **Permissible Values for RBFL**

Ν No Υ

#### UMOW **Owner Mandatory** Primary reporting mark of the railroad or private company owning the car

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### NOTES:

Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.

**Equipment Group Mandatory** 0002 Identifies the various major car types Used for Transportation Codes. Affects Rating.

**LESE** The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### Validation Rule for LESE

- -Umler Owner (UMOW) and Lessee are not allowed to be equal
- -Lessee cannot be a reporting child mark

#### NOTES:

- If reported, the reporting mark cannot be equal to the owner or be a family reporting mark.
- In order to assign privately marked cars to a pool, a railroad reporting mark must be reported.

#### **Maintenance Party**

**MNPT** 

The parent reporting mark of the company responsible for the maintenance and repairs of the equipment

Does not Carry Forward.

#### **Mark Owner Category**

B201

#### The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

#### Permissible Values for B201

- US Private В
- Canadian Private C
- Foreign Private
- Н Canadian Class II
- Canadian Class I
- Mexican Class I J
- Κ Canadian Class III
- М Mexican Private
- Ν **US Private Steamship**
- 0 Canadian Private Steamship
- Р Mexican Private Steamship
- Q Foreign Private Steamship
- R US Class II Railroad
- U US Class I Railroad
- ٧ US Class III Railroad
- W Mexican Class II Railroad
- Υ Mexican Class III Railroad

#### NOTES:

• This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry.

#### **Prior Equipment ID**

PRID

#### The previous reporting mark and number of the equipment

Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for PRID

- -Prior and target equipment's Built Date (BLDT) must match
- -The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

#### NOTES:

Prior ID enables equipment records to share the same historical lineage. Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

**Last Update Date** 

**B122** 

#### Date of the last Umler element change

System Generated Field. This element is not eligible for Input.

**Equipment Add Date** 

B082

#### Date the reporting mark and number was added to the Umler system

System Generated Field. This element is not eligible for Input.

**Status Change Reason** 

**USCR** 

#### Identifies the reason for the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

#### **Permissible Values for USCR**

- **Initial Load**
- М Movement
- Status Changed Manually 0
- R

#### NOTES:

- If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

**Status Change Date** 

**USCT** 

#### Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry

**Extended Service Mandatory** 

A096

A code indicating the eligibility of an increase to the life cycle

Used for Transportation Codes. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A096

- 1st ILS Inspection, additional 5 years of Service 1
- 2 2nd ILS Inspection, additional 5 years of service (10 years total)
- 3 3rd ILS Inspection, additional 5 years of service (15 years total)
- С Built New between January 1, 1964 - June 30, 1974, Certified for 50 Years of Service, Built New Before July 1, 1974 & Received AAR Waiver
- Ε Built new from July 1,1974, Qualified for 50 Years Service
- Ν Built Before January 1, 1964, Qualified for 40 Years Service
- R Rule 88. Rebuilt cars
- U Built between January 1, 1964 - June 30, 1974, Qualified for 40 Years & eligible for certification for 50 Years Service
- Car is certified (FRA Waiver & AAR) for 65 years of service from date built new from January 1, 1964

#### Validation Rule for A096

- -If Rebuilt Date (RBDT) is reported, then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life
- -Extended Service Code of C cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974
- -Extended Service Code of E cannot be reported if the car was built before July 1, 1974
- -Extended Service Code of N cannot be reported if the car was built on/after January 1, 1964
- -Extended Service Code of U cannot be reported if the car was built before January 1, 1964 or on/after July 1, 1974

- Value is used to calculate End of Service Date (B078).
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years service.
- Rebuilt Date (RBDT) is required for Extended Service Code (A096) 1, 2, 3, and V for Increased Life Service.

**End of Service Date** 

**B078** 

#### Indicates the date of the end of equipment life

Data is Confidential. System Generated Field. This element is not eligible for

#### NOTES:

Data becomes non-confidential two years prior to End of Service Date.

Do Not Load After

B590

Equipment should not be loaded after date shown in the element

Data is Confidential

#### Validation Rules for B590

-Do Not Load After (B590) cannot be updated thirty days prior to the date shown in the element.

=Mandatory ▲=Used in ETC Generation

- -Do Not Load After (B590) cannot be updated within thirty days of the End of Service Date (B078).
- -Do Not Load After (B590) date cannot be on or after the End of Service (B078) date.

#### NOTES:

- The element will be initially populated by End of Service (B078) minus 30 days.
- Data becomes non-confidential thirty days prior to the Do Not Load After (B590) date.

#### **Equipment Identification**

**EINN** 

#### Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

#### NOTES:

 Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections.

#### Info Conflict Status

B355

#### Indicates that an Informational Conflict exists on the Equipment record

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### **Conflict Status**

B050

#### Identifies the escalation level of equipment in active conflict

System Generated Field. Affects Rating. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B050

- 1 Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

#### Date of Original Conflict

B063

#### The date the equipment was originally placed in the current conflict

System Generated Field. This element is not eligible for Input.

#### **Next Conflict Status**

B135

#### Identifies the next escalation level of an equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B135

- 1 Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Notice Indicator** 

=Mandatory

B137

#### Identifies equipment in error in Umler Notice Management

System Generated Field. This element is not eligible for Input.

#### **Conflict Status Next Date**

B062

#### The date the conflict status will be escalated

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Rate Indicator

A070

#### Indicates the rate type applicable to the unit

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for A070

- 0 Zero-Rated Due to Conflict Errors
- 2 Private Mileage Rate
- 4 Private Car Owner Designated Rate
- 6 Zero-Rated Scrap (S\_,SX), AAR Overage (XA), FRA Overage (YA), Umler Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].
- M Railroad Market Rate
- Q Zero-Rated Railroad Market Rate Due to Conflict Errors

#### NOTES:

• If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.

#### **Private Zero Rate**

B150

Indicates a private car is subject to contractual agreement, nullifying mileage rates

#### Affects Rating.

#### Permissible Values for B150

Y Yes

#### NOTES:

• Reporting "Y" generates Rate Indicator (A070) value 6 and a zero rate.

#### **TTX Hourly Rate**

B212

#### Time Charge-The TTX hourly rate for the equipment

Data is Confidential. This element is not eligible for Query.

#### Range of Values for B212

Minimum	Maximum
0	9

#### Validation Rule for B212

-TTX Hourly rate can only be set on TTX owned Equipment.

#### TTX Mileage Rate

B213

#### Mileage Charge-The TTX mileage rate for the equipment

Data is Confidential. This element is not eligible for Query.

#### Range of Values for B213

Minimum	Maximum
0	1

#### Validation Rule for B213

-TTX Mileage rate can only be set on TTX owned Equipment.

#### **First Movement Date**

USAT

#### The first movement date under the stenciled mark of the equipment

This element is not eligible for Input. Does not Carry Forward.

#### **Equipment Add Company**

B083

## The reporting mark of the company that added the equipment

System Generated Field. This element is not eligible for Input.

Ν

New

# Registration Reason The code indicating the reason this equipment is added

B174

#### Does not Carry Forward.

#### Permissible Values for B174

A Add-Back
P Pending Restence

**Restencil Program Ind** 

Pending Restencil R Restencil

R177

#### Identifies the equipment is under a restencil program

Permissible Values for B177

Y Yes

▲=Used in ETC Generation = Affects Rating

I	Delete Reason Code	B064
	A code that designates the reason the equipment has been deleted	

Value does not carry forward for Add Back.

#### Permissible Values for B064

- Restenciled
- D Destroyed or wrecked
- Lease terminated, removed from fleet L
- Retired unserviceable beyond economic repair

carry forward for Single Clone / Multi-Clone.

- R Rebuilt
- Sold Serviceable S
- W Over age retired for dismantling
- Υ Error, reporting did not exist
- Z Other

Non-Compliant Wheelsets	B5
Equipment record is incomplete and has a missing wheelset component	t ID

association. Refer to AAR Field Manual Rule 44 for industry requirements System Generated Field. This element is not eligible for Input. Value does not

#### Validation Rule for B544

- -A Wheelset Component ID is required for each applicable location on equipment built on or after January 1, 2016
- -A Wheelset Component ID is required for each applicable location on equipment rebuilt on or after January 1, 2016 and Gross Rail Load (A266) is greater than 268,000 lbs

#### NOTES:

- A "Y" will be system generated if the equipment is active and the number of Wheelset CID's required is not equal to the Axle Count (A024) on the
- Validation rule applies to equipment that has been in Active status for 60 days

#### **Pseudo Equipment Group**

B544

Equipment needs to be identified as a miscellaneous record while maintaining all elements linked to the original equipment group

System Generated Field.

#### Permissible Values for B547

Miscellaneous MISC

## Weight

#### Gross Rail Load/Weight Mandatory

A266

The maximum permissible weight on rail of the equipment and the load, reported in pounds

Affects Rating.

#### Range of Values for A266

Minimum	Maximum
157000	2835000

#### Validation Rule for A266

-Gross Rail Load must be equal to the Load Limit (LDLT) plus the Tare Weight (A259)

#### NOTES:

Use Table 1 below to determine Gross Rail Load, if Qualification for Increased Gross Rail Load (B344) does not exist.

#### TABLE 1 -

Journal Size	Load per Axle	Gross Rail Load for 4-axle Equipment
B - 4 1/2" x 8"	25,750 lbs.	103,000 lbs.
C - 5" x 9"	35,500 lbs.	142,000 lbs.
D - 5 1/2" x 10"	44,250 lbs.	177,000 lbs.
E - 6" x 11" (w/28"	48,750 lbs.	195,000 lbs.
1W wheels)		
E - 6" x 11" (w/all	55,000 lbs.	220,000 lbs.

other wheels)

F - 6 1/2" x 12"	65,750 lbs.	263,000 lbs.
G - 7" x 12"	78,750 lbs.	315,000 lbs.
K - 6 1/2" x 9"	71,500 lbs.	263,000 lbs.
M - 7" x 9"	78,750 lbs.	315,000 lbs.

Use Table 2 below to determine Gross Rail Load for 4-axle equipment if Qualification for Increased Gross Rail Load (B344) exists.

#### TABLE 2 -

Qualification for Increased Gross Rail Load (B344)		Gross Rail Load
1	K - 6 1/2" x 9"	286,000 lbs.
1	G - 7" x 12"	286,000 lbs.
1	M - 7" x 9"	286,000 lbs.
2	F - 6 1/2" x 12"	286,000 lbs.
2	K - 6 1/2" x 9"	286,000 lbs.
3	F - 6 1/2" x 12"	268,000 lbs.
3	K - 6 1/2" x 9"	268.000 lbs.

- For multi-unit equipment, report the total gross rail load for the entire set.
- Refer to Field Manual Rule 70 if additional information is required.

A Gross Rail Load less than the listed or calculated values may be entered; however:

- Star Code (A247) must be R or S, and
- Load Limit (LDLT) must also be reduced, ensuring Tare Weight (A259) plus Load Limit (LDLT) equals the reported Gross Rail Load.

For equipment having two or more different journal sizes, see following examples:

Example for Drawbar Connected:

- A 3-unit drawbar connected car has 12 axles.
- The end units (Locations A and B) each have 4 axles with E 6" x 11"
- The intermediate unit (Locations C) has 4 axles with F 6 1/2" x 12" iournals

Using TABLE 1, the Gross Rail Load would be:

8 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = + 4 ea. F-6 1/2" x 12" journal axles X 65,750 lbs. per axle = 263,000 lbs. Gross Rail Load = 703,000 lbs.

Example for Articulated Connected:

- A 5-unit articulated intermodal car has 6 trucks (12 axles).
- The end trucks (Locations A and B) each have 2 axles with E 6" x 11"
- The intermediate trucks (Locations C, D, E, and F) each have 2 axles with G - 7" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

4 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 220,000 lbs. + 8 ea. G-7" x 12" journal axles X 78,750 lbs. per axle = 630,000 lbs. Gross Rail Load = 850.000 lbs.

#### Tare Weight Mandatory

A259

The equipment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

#### Affects Rating.

#### Range of Values for A259 Minimum Maximum 70000 1224000

Validation Rule for A259

- -Tare Weight (A259) of VFLT with a blank Connected Unit Count (A020) must contain values between 70000 lbs. and 136000 lbs.
- -Tare Weight (A259) of VFLT where Connected Unit Count (A020) is 2 must contain values between 130000 lbs. and 272000 lbs.
- -Tare Weight (A259) of VFLT where Connected Unit Count (A020) is 3 must contain values between 210000 lbs. and 408000 lbs.
- -Tare Weight (A259) of VFLT where Connected Unit Count (A020) is 4 must contain values between 280000 lbs. and 544000 lbs.
- -Tare Weight (A259) of VFLT where Connected Unit Count (A020) is 5 must contain values between 350000 lbs. and 680000 lbs.
- -Tare Weight (A259) of VFLT where Connected Unit Count (A020) is 6 must contain values between 420000 lbs. and 816000 lbs.
- -Tare Weight (A259) of VFLT where Connected Unit Count (A020) is 7 must contain values between 490000 lbs. and 952000 lbs.
- -Tare Weight (A259) of VFLT where Connected Unit Count (A020) is 8 must contain values between 560000 lbs. and 1088000 lbs.
- -Tare Weight (A259) of VFLT where Connected Unit Count (A020) is 9 must contain values between 630000 lbs. and 1224000 lbs.
- Tare Weight (A259) value must be reported to the nearest 100 pounds if Weighing Date (A288).

#### NOTES:

- Do not report an average Tare Weight for car series, except for Pre-Registered cars
- When cars are made active, the actual Tare Weight must be recorded
- For current single-unit VFLTs, lowest tare weight is 70,000 lbs. Largest tare weight is 136,000lbs. Maximum permissible value shown above is 136,000 lbs. X 9 = 1,224,000 lbs.

#### **Load Limit Mandatory**

LDLT

The maximum permissible weight of the commodity that can be loaded into the equipment, reported in pounds

Affects Rating.

#### Range of Values for LDLT

Minimum	Maximum
50000	650000

#### Validation Rules for LDLT

- -Load Limit (LDLT) of VFLT with a blank Connected Unit Count (A020) must contain values between 50000 lbs. and 150000 lbs.
- Load Limit (LDLT) of VFLT where Connected Unit Count (A020) is 2 must contain values between 80000 lbs. and 300000 lbs.
- Load Limit (LDLT) of VFLT where Connected Unit Count (A020) is 3 must contain values between 150000 lbs. and 450000 lbs.
- Load Limit (LDLT) of VFLT where Connected Unit Count (A020) is 4 must contain values between 200000 lbs. and 600000 lbs.
- Load Limit (LDLT) of VFLT where Connected Unit Count (A020) is 5 must contain values between 250000 lbs. and 750000 lbs.
- Load Limit (LDLT) of VFLT where Connected Unit Count (A020) is 6 must contain values between 300000 lbs. and 900000 lbs.
- Load Limit (LDLT) of VFLT where Connected Unit Count (A020) is 7 must contain values between 350000 lbs. and 1050000 lbs.
- Load Limit (LDLT) of VFLT where Connected Unit Count (A020) is 8 must contain values between 400000 lbs. and 1200000 lbs.
- Load Limit (LDLT) of VFLT where Connected Unit Count (A020) is 9 must contain values between 450000 lbs. and 1350000 lbs.

#### NOTES:

- For connected unit cars report the sum of the load limits for all units in the set.
- For current single-unit VFLTs, lowest load limit is 50,500 lbs. (rounded down to 50,000). Largest load limit is 150,000 lbs. Maximum permissible value shown above is 150,000 lbs. X 9 = 1,350,000 lbs.

#### Weighing Status Mandatory

A289

Indicates the weight information is an estimate or an actual measurement

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A289

- A Actual
- E Estimated
- V Verified correct Tare Weight
- X Tare Weight subject to verification (System Generated)

#### Validation Rule for A289

- -Equipment cannot be within a series of 10 with identical Tare Weights (A259), refer to Appendix P for further information on resolving tare weight conflicts
- -When Status Code changes to Active or Inactive Weighing Status must be reported as Actual (A) or Verified (V) within 60 days of Status Code change

Weighing Date A288
The date the equipment was actually weighed

Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A288

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for A288

- -If Weighing Date is reported the Tare Weight (A259) must be reported
- -When Weighing Date is reported then Weighing Status (A289) must be A (Actual) or V (Verified)
- -If Weighing Status (A289) is A (Actual) or V (Verified correct Tare Weight) then Weighing Date must be reported
- -Weighing Date must be on or before the current date
- -Weighing Date cannot be before Built / Rebuilt date

Star Code A247

Indicates a reduction of the Load Limit (LDLT) of the equipment per AAR Rule 70

Affects Rating.

#### Permissible Values for A247

- R Body Capacity less than Truck Capacity
- S Reduced Load Limit

#### NOTES:

- Equipment having Qualification for Increased Rail Load of 1 or 2, and a Gross Rail Load (A266) less than 286,000 lbs., must have Star Code (A247) of S
- Equipment having Qualification for Increased Gross Rail Load (B344) of 3, and a Gross Rail Load (A266) less than 268,000 lbs., must have Star code of S.
- Star Code must be reported if Gross Rail Load (A266) is less than the maximum gross rail load allowed for the reported combination of Axle Count (A024) and Journal Size (A147).

Qual for Inc GRL B344

Code designating AAR approval for operating 4-axle equipment at a gross rail load greater than 263,000 lbs per AAR Rule 88

#### Permissible Values for B344

- 1 Rule 88 IGRL Code 1 (> 263,000 lbs. and <= 286,000 lbs. GRL per AAR Specification S-286)
- 2 Rule 88 IGRL Code 2 (> 263,000 lbs. and <= 286,000 lbs. GRL)
- 3 Rule 88 IGRL Code 3 (> 263,000 lbs. and <= 268,000 lbs. GRL)

#### Validation Rules for B344

- -Equipment having Qualification for Increased Gross Rail Load of 1 or 2 must have a Gross Rail Load (A266) that does not exceed 286,000 lbs.
- -Equipment having Qualification for Increased Gross Rail Load of 3 must have a Gross Rail Load (A266) that does not exceed 268,000 lbs.
- -Equipment having Qualification for Increased Gross Rail Load of 1 must have a Journal Size (A147) of K, G, or M
- -Equipment having Qualification for Increased Rail Load of 2 or 3 must have a Journal Size (A147) of F or K

**- 189 -**

- -Equipment having Qualification for Increased Gross Rail Load of 1, 2, or 3 must have a Wheel Diameter (A294) of 36 or 38
- Equipment having Qualification for Increased Gross Rail Load (B344) of 3 and a Gross Rail Load (A266) less than 268,000 lbs., must have Star Code of S

#### Dimension

Plate Code Mandatory

A046

Indicates the extreme height and width clearance of the equipment

Affects Rating.

#### Permissible Values for A046

J Plate Code J K Plate Code K

G Clearance Code G

#### NOTES:

 For ARTICULATED/MULTI-UNIT SET report the most restrictive clearance plate of UNIT in the set.

#### **Outside Length Mandatory**

**OSLG** 

The outside length over pulling faces of couplers in normal position

Affects Rating. Displayed in feet and inches on the Web. Stored in inches. Range of Values for OSLG

Minimum	Maximum
86 ft 2 inches	854 ft 3 inches

#### **Validation Rule for OSLG**

- -Outside Length (OSLG) on freight cars must exceed the Inside Length (A135) by 2 feet or more
- -Outside Length (OSLG) on freight cars (except refrigerators) must not exceed Inside Length (A135) by more than 16 feet
- Outside Length (OSLG) of VFLT with a blank Connected Unit Count (A020) must contain values between 86 feet 2 inches and 94 feet 11 inches
- Outside Length (OSLG) of VFLT where Connected Unit Count (A020) is 2 must contain values between 172 feet 4 inches and 189 feet 4 inches
- Outside Length (OSLG) of VFLT where Connected Unit Count (A020) is 3
- must contain values between 258 feet 6 inches and 284 feet 9 inches
   Outside Length (OSLG) of VFLT where Connected Unit Count (A020) is 4
  must contain values between 344 feet 8 inches and 379 feet 8 inches
- Outside Length (OSLG) of VFLT where Connected Unit Count (A020) is 5 must contain values between 430 feet 10 inches and 474 feet 7 inches
- Outside Length (OSLG) of VFLT where Connected Unit Count (A020) is 6 must contain values between 517 feet 0 inches and 569 feet 6 inches
- Outside Length (OSLG) of VFLT where Connected Unit Count (A020) is 7 must contain values between 603 feet 2 inches and 664 feet 5 inches
- Outside Length (OSLG) of VFLT where Connected Unit Count (A020) is 8
- must contain values between 689 feet 4 inches and 759 ft 4 inches
   Outside Length (OSLG) of VFLT where Connected Unit Count (A020) is 9
  must contain values between 775 feet 6 inches and 854 feet 3 inches

#### NOTES:

- For connected unit cars report the maximum coupled length of the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

Outside Extreme Width Mandatory

A186

The outside extreme width of the equipment

Affects Rating. Displayed in feet and inches on the Web. Stored in inches. Range of Values for A186

Minimum	Maximum
9 ft 6 inches	10 ft 8 inches

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

#### **Outside Extreme Height Mandatory**

A185

Height from top of rail to extreme projecting height

Used in ETC Generation. Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A185

Minimum	Maximum
2 ft 0 inches	22 ft 6 inches

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

#### Outside Height Extr Width Mandatory

A187

The highest point at which the extreme width of the equipment occurs

Displayed in feet and inches on the Web. Stored in inches

#### Range of Values for A187

Minimum	Maximum	
1 ft 0 inches	20 ft 0 inches	

#### Validation Rule for A187

- -Outside Extreme Width (A186) for Plate Code J must not exceed 10 feet 8 inches if Outside Height Extreme Width is 16 feet 4 inches or less
- -Outside Extreme Width (A186) for Plate Code K must not exceed 10 feet 8 inches if Outside Height Extreme Width is 18 feet 5 inches or less

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

#### Inside Length A135

The inside length of the equipment from end to end inside walls, linings, and permanent bulkheads

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A135

Minimum	Maximum	
69 ft 0 inches	145 ft 0 inches	

#### Validation Rule for A135

- -Inside Length must be at least 42 inches less than Outside Length (OSLG)
- -If Connected Unit Count (A020) is not reported, Inside Length of Vehicular Flat must be less than or equal to 99 feet 3 inches
- -If Connected Unit Count (A020) is reported, and Intermediate Conn Style (B115) is "A Articulated", the Inside Length of Vehicular Flat must be greater than or equal to 139 feet 0 inches

#### NOTES:

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the shortest dimension of a unit in the set.

## Inside Width A138

The inside width of the equipment from side walls and linings Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A138

Minimum	Maximum	
4 ft 0 inches	12 ft 6 inches	

#### Validation Rule for A138

-Inside Width/Inside Platform Width must not exceed Outside Extreme Width

• For connected unit cars report the shortest dimension of a unit in the set.

#### **Inside Height**

A133

The inside height of the equipment from the floor to the top of the side, or to the lowest point of the interior ceiling

Value does not carry forward for Equipment Group Change.

#### Range of Values for A133

Minimum	Maximum
12	169

●=Mandatory ▲=Used in ETC Generation

2

#### NOTES:

• For connected unit cars report the shortest dimension of a unit in the set.

Truck Center Length A276

The length between the centers of the two truck systems

Affects Rating. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A276

Minimum	Maximum	
15 ft 0 inches	76 ft 11 inches	

#### Validation Rule for A276

- -Truck Center Length is required for cars with an Outside Length of greater than 62 feet 6 inches
- -Truck Center Length must be a minimum of 15 feet for cars with an Outside Length greater than 62 feet 6 inches

#### NOTES:

• For connected unit cars report the dimension of the largest unit in the set.

Platform Hght Above Rail Mandatory	A192
Describes the platform height above the rail in inches	• 🛦

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A192

Minimum	Maximum
1 ft 3 inches	6 ft 0 inches

#### Validation Rule for A192

-Platform Height cannot be greater than Outside Height

#### NOTES:

 EXCEPTIONS: For bi-level and tri-level flat cars, measurement is from top of rail to top of floor of lower deck. Feet in Pos. 45-46, inches in Pos. 47-48.
 Round fraction to the higher inch, e.g., 05 1/4" = 06. This field must agree relationally for V\_\_\_ Equipment Type Codes and P\_\_\_\_.

P	MINIMUM—1ft 1in MAXIMUM—4ft
	9in
Q	MINIMUM—10in MAXIMUM—4ft
S	MINIMUM—10in MAXIMUM—4ft
All F except F_3_ and F_6_	MINIMUM—2ft MAXIMUM—5ft 11in
All F_3_, F_6_ and F_9_	MINIMUM—2ft MAXIMUM—8ft 11in
Q8	MINIMUM—2ft 6in MAXIMUM—5ft
P1, P2, P5, P6	MINIMUM—2ft MAXIMUM—3ft 3in
P3, P4, P7, P8	MINIMUM—3ft 4in MAXIMUM—5ft
	11in
P9	MINIMUM—3ft 2in MAXIMUM—3ft
	2in
Q_1_	MINIMUM—2ft MAXIMUM—2ft 8in

See diagram below for place of measurement on depressed cars (Equipment Type Code  $F_3$ ,  $F_9$ ) and well cars (Equipment Type Code  $F_6$ ).

Door	
Anti-Pilferage Locking	B016
Indicates that the doors are equipped with an anti-pilferage locking device	

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B016

Y Yes

Truck Count
The total number of

Specification	
	B256
of trucks on the equipment	

System Generated Field. This element is not eligible for Input.

Range of Values for B256
Minimum | Maximum

18

Axle Count *Mandatory*The total number of axles on the equipment

Affects Rating.

Range of Values for A024		
Minimum	Maximum	
4	36	

#### **Validation Rule for A024**

- -Axle Count must be greater than or equal to 4
- -Axle Count for an articulated car must be greater than or equal to ((Connected Unit Count (A020) x 2) + 2)
- -Axle Count for a draw bar connected car must be greater than or equal to (Connected Unit Count (A020) x 4)
- -Total Axle Count must match sum of truck axle counts

# Wheel Bearing Type *Mandatory*Indicates the wheel bearing journal design for the equipment

Affects Rating.

#### Permissible Values for B191

P Plain R Roller

#### Validation Rule for B191

- -Cars with Plain Bearings will have a Transportation Code (TCOD) and Transportation Condition Code (TCCD) of either YA, S\_, SX, or XJ
- -Equipment cannot have Plain Bearings if Built Date (BLDT) is on or after January 1, 1993

# Bearing Shielded From HBD B021 Indicates the wheel bearings are shielded from wayside hot box detectors

#### Permissible Values for B021

/ Yes

Brake Shoe Type Mandatory	B026
Indicates the type of brake shoe on the equipment	•

## Permissible Values for B026

- C Tread Conditioning
- H High Friction Composite
- L Low Friction Composite/Cast Iron

# CC Side Bearing Type A146 Indicates the travel range of the constant contact side bearings installed on the equipment

#### Permissible Values for A146

- LC Long Travel Constant Contact
- SC Short Travel Constant Contact

#### Validation Rule for A146

-Equipment having Qualification for Increased Gross Rail Load (B344) of 1 must have Constant Contact Side Bearing Type of LC

# Empty/Load Device Eqpd B075

Indicates that the air brake system includes a device to determine if the equipment is empty or loaded, and then varies the braking forces accordingly

#### Permissible Values for B075

Y Yes

## Center of Gravity Empty A045

When empty, indicates the height from Top of Rail to the Center of Gravity

Range of Values for A045	
Minimum	Maximum
22	98
Validation Pulo for AD/IE	

Validation Rule for A045

-All cars that exceed Plate Code (A046) C must report Center of Gravity Empty except for cars with Equipment Type Code (UMET) of J\_\_\_

#### **Remote Monitoring Device**

B176

Indicates the equipment has a device that transmits a signal or records data

#### Permissible Values for B176

Y Yes

#### N No

#### NOTES:

 Per AAR S-2045, This may be data related to ride quality, geographic location, temperature/condition of the load, load/empty status, etc.

#### **AEI High Temperature Tag**

B006

Indicates the equipment is equipped with a high temperature AEI tag

#### Permissible Values for B006

Y High Temperature Tag

#### **Connected Unit Count**

Δ020

Indicates the number of units within an articulated or multi-unit equipment

Used in ETC Generation. Affects Rating.

#### Range of Values for A020

Minimum	Maximum
2	45

#### Validation Rule for A020

- -Connected Unit Count must equal the number of Unit Segments
- -Unit Segment Component elements must not be reported if the Connected Unit Count is not reported
- -Unit Segment Component elements must be reported if Connected Unit Count is reported

#### **Intermediate Conn Style**

B115

Indicates the method by which two or more pieces of equipment are connected

#### Permissible Values for B115

- A Articulated Connector
- D Drawbar Connector

#### Validation Rule for B115

- -Intermediate Connector Style is required for multi-unit equipment
- -Intermediate Connector Style must not be reported for single unit equipment

#### **Operating Brakes Mandatory**

A182

The number of air brake control valves on the equipment (excludes hand brakes). One control valve consists of a service portion, emergency portion, and pipe bracket. Example: DB-60 control valve

#### Permissible Values for A182

1	2	3	4	5
6	7	8	9	

#### Validation Rule for A182

- -Operating Brakes can only be reported for articulated equipment
- -Operating Brakes are required for articulated equipment
- -Operating Brakes (A182) must be 1 for non-articulated equipment with an Axle Count (A024) equal to 4

#### NOTES:

• Excludes empty/load device, number 8 vent valve, and proportion valve.

ECP Brake Type	B327
Indicates the type of electronic controlled pneumatic brake used on the	9

#### Permissible Values for B327

N Not Equipped

equipment

- O Overlay Both ECP & Air Brake
- S Stand Alone ECP Only

#### Validation Rule for B327

 Equipment must have a value entered for ECP Brake Type if built or rebuilt after June 28, 2012

#### **ECP Brake Builder**

**B328** 

The manufacturer of the electronic controlled pneumatic brake used on the equipment

#### Permissible Values for B328

NYAB New York Air Brake

WABT WABTEC

#### Validation Rule for B328

- -If ECP Brake Type (B327) is Stand Alone or Overlay then a value must be entered for ECP Brake Builder
- -If ECP Brake Type (B327) is Not Equipped then ECP Brake Builder is not reportable

#### Slack Adjuster Group

B538

The slack adjuster group on the equipment per AAR Field Manual Rule #8

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B538

Α	Group A	В	Group B	С	Group C	D	Group D
Ε	Group E	F	Group F	G	Group G	Н	Group H
J	Group J	L	Group L	M	Group M	Ν	Group N
0	Group O	Р	Group P	Q	Group Q	R	Group R
1	Internal	2	Unequipped				

#### Validation Rule for B538

- Slack Adjuster Group is mandatory for all equipment built or rebuilt on or after January 1, 2016
- If Slack Adjuster Group is reported as "1" then Brake Cylinder Mount Type (B540) must be reported as "T"
- If Slack Adjuster Group is "1" or "2", then Slack Adjuster CID (B359) must not be reported.

#### NOTES:

 Permissible value of "1 – Internal" identifies special truck mounted internal slack adjuster within brake cylinder.

# Brake Cylinder Mount Type Identifies the location of the brake cylinder

B540

Permissible Values for B540

#### Permissible values for Bo

B Body Mounted
T Truck Mounted

#### Validation Rule for B540

 Brake Cylinder Mount Type is mandatory for all equipment built or rebuilt on or after January 1, 2016

#### **Equipment Builder**

A035

Identifies the original manufacturer of the equipment

#### Permissible Values for A035

ACF American Car & Foundry
ACFX ACF Industries

ARI ARI Industries
BETH Bethlehem Car Works

CONC Concarrill
DIFC Difco

EDSP ESTRATEGIAS DUL S. DE R.L.

FMC FMC Corporation

GMB Greenbrier

JAC Johnstown America Corporation

KASG Kasgro Railcar MULT Multiple

NACA National Alabama Corporation

NSC National Steel Car

PS Pullman-Standard

PSP Pullman-Standard, Division of Trinity Industries

THRI TRIN Trinity UNKN Unknown

Validation Rule for A035-Equipment Builder must be populated if the Built Date (BLDT) is July 1, 2010 or newer

- -Equipment built or rebuilt on or after July 1, 2010 cannot have a Equipment Builder of Unknown
- -Equipment with a Built Date (BLDT) on or after July 1, 2010 cannot have an Equipment Builder Code of OWNER RAILROAD.
- -Equipment Builder can have a value of MULT only if the equipment has multiple units.

**Builder Lot Code B030** 

A unique identifier for a group of equipment built by one manufacturer under the same contract

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Validation Rule for B030

-Equipment built or rebuilt on or after June 28, 2012 must have a value for **Builder Lot Code** 

**Built Country** B031

The country where the equipment was constructed

Data is Confidential.

#### Permissible Values for B031

CA Canada Mexico MX

US **United States** 

**Rebuilt Country B170** 

The country where the equipment was re-constructed

#### Permissible Values for B170

CA Canada MX Mexico

US **United States** 

**FRA Reflectorization** B096

Indicates the equipment owner assumes responsibility for applying reflectorization tape

#### Permissible Values for B096

- Р Reflectorization Plan
- W Reflectorization Waiver

#### Validation Rule for B096

-Reflectorization is mandatory for all equipment after November 28, 2015.

Air Hose Arrangement **B524** The type of trainline air hose arrangement

#### Permissible Values for B524

- S-424 Angle Cock Location
- В S-425 Angle Cock Location on Cars Equipped with AAR Type F Coupler
- S-426 Angle Cock Location on Cars with Floating Sills C
- D S-427 Angle Cock and Air Brake Hose Location on Cars with Excessive Overhang Preventing Compliance with AAR Standards
- Ε S-428 Angle Cock Location on Cars Equipped with AAR Type F Coupler and Cushioned Underframe
- F S-4003 (Former Standard)
- G S-4003x (Former Standard Retrofitted to Meet All Dimensions Except
- Н S-4003-05 (Current Standard Train Line Arrangement for Cars with F-Shank Couplers)
- S-4021 Angle Cock and Brake Hose Location on Cars with EOCC (E and
- J S-4021 Coupler Mounted Bracket End Arrangement
- S-4028 Train Line Arrangement with Displaceable Union on Cars with Κ EOCC and Couplers Not Exceeding 45 in. in Length

- S-4029 Train Line Arrangement with Displaceable Union on Cars with EOCC and Couplers Exceeding 45 in. in Length
- S-4030 Trolley Arrangement on Cars with EOCC and E-Shank Couplers

#### Validation Rule for B524

-Air Hose Arrangement must be reported for this equipment if it is Built or Rebuilt on or after April 22, 2014.

#### NOTES:

- If any of the following conditions apply, Air Hose Arrangement (B524) must be reported for cars Built or Rebuilt on or after April 22, 2014:
  - Draft Gear Type (B073) at any location is C or E.
  - Connected Unit Count (A020) is reported.
  - Outside Length (OSLG) is greater than or equal to 70 feet (840 inches).
  - The overhang is greater than 5 feet 6 inches (66 inches). Overhang is calculated as follows:
  - 0.5 \* (Outside Length, in inches, minus Truck Center Length, in inches, minus 31 inches)
  - For all other equipment, reporting Air Hose Arrangement is optional.

#### 4-Pressure ABT Receiver Eqpd

Identifies if the equipment is equipped with a 4-pressure air brake test receiver

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B539

Equipped

Ν Not Equipped

#### NOTES:

 An "E" will be system generated if a 4-Pressure ABT is reported on the equipment.

#### **Feature**

Floor Material

Describes the type of construction material used for the equipment floor

#### Permissible Values for A104

- 01 Aluminum
- 19 Standard Steel
- 25 Standard Steel, Reinforced

#### **Tie-Down Strap Type**

**B400** 

Indicates the type of tie-down strap used with the chocks

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B400

Harness S

#### **Supplemental Restraint**

B401

#### Supplemental Restraint

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B401

Holden В ZefTek AVR

#### **Chain Equipped**

R402

Indicates the vehicular flat is equipped with chains to tie down the vehicles. This is in addition to Chock Type

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B402

Yes

**Original Cost** 

#### Cost

The original manufacturer selling price

A184

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

Range of Values for A184

**- 193 -**

\*=Conditionally Mandatory

Minimum	Maximum
0	9999999

Validation Rule for A184-Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.

- -Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported.
- -Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost
- -Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

#### NOTES:

- Original Cost is never altered. It is the cost of the equipment to the original
- For railroad-marked cars, report in US dollars the original ledger value of original owner For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24
- The original cost is used in the settlement of AAR Interchange Rule 107 Office Manual.
- For connected unit cars report the total original cost for all units in the set.
- Numeric, applicable to all railroad-marked cars Also, applicable to privately marked covered hopper (LO) cars.
- NOTE: Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

Ledger Value	A150
The sum of original cost and additions & betterments	

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A150

Minimum	Maximum
0	9999999

Validation Rule for A150-Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.

-Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

Total A&B **Δ003** System generated sum of all reported amounts in A&B Amount (A317), in US

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A003

Minimum	Maximum
0	99999999

#### NOTES:

dollars

- For railroad-marked cars, report the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not be used to report Ledger Value.
- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.
  - Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
  - Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.
- For connected unit cars report the total Truck Location A for all units in the set

#### Ind for Pos/Neg Total A&B

**- 194 -**

A code indicating the positive or negative adjustment to the original cost of the

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A128

Negative Positive

#### A&B Pos/Neg Ind

A316

A code indicating the positive or negative adjustment to the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A316

Ρ Negative

#### Validation Rule for A316

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -The A&B Indicator is required when Additions & Betterments are reported.
- -The A&B Indicator must not be reported if Additions & Betterments are not

#### **A&B Amount** A317

The amount of the individual addition and betterment added to or subtracted from the original cost of the equipment

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Range of Values for A317

Minimum	Maximum
1	999999

#### Validation Rule for A317

-When entering an individual addition & betterment; A&B Date Done (A319), A&B Type (A318), A&B Pos/Neg Ind (A316), and A&B Amount (A317) must be reported

A&B Date Done	A319
The date of the individual addition and betterment	

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Range of Values for A319

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for A319

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -Addition and Betterment Date Done cannot be earlier than Built Date (BLDT).
- -Additions & Betterments Date Done cannot be later than today's date.

#### A&B Type A318 The type of individual addition and betterment as defined by Rule 107

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

#### Permissible Values for A318

Other permanently installed loading equipment used on flat cars FIID

GNRI General - Capitalized Additions and Betterments

INIT Initial load of historical A&B amount as of Umler 4.6 implementation

RACK Multi-deck racks used on flat cars for automobiles

#### Validation Rule for A318

- -For each equipment, only one Individual A&B Type can have a value of
- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.

#### Superstructure

SS Identification **B156** 

The Superstructure (rack) identification stenciled number

Value does not carry forward for Equipment Group Change.

Validation Rule for B156

\*=Conditionally Mandatory

-SS Identification (B156) is mandatory for all superstructures not integrated with the flat car built on or after September 14, 2023

#### Superstructure Built Date

SBDT

#### The date the construction of the Superstructure is complete

Value does not carry forward for Equipment Group Change.

#### Range of Values for SBDT

Minimum	Maximum
1/1/1970	12/31/9999

#### **Validation Rule for SBDT**

- Superstructure Built Date cannot be set if Superstructure is integrated with car
- Superstructure Built Date must be set if SS integrated with car (B342) is blank

#### SS Rebuilt Date

SRDT

#### The date the reconstruction of the Superstructure is complete

Value does not carry forward for Equipment Group Change.

#### Range of Values for SRDT

	Minimum	Maximum
Ī	1/1/1900	12/31/9999

#### Validation Rule for SRDT

- -Superstructure Built Date on VFlat must be prior to Superstructure Rebuilt Date
- Superstructure Rebuilt Date cannot be set if Superstructure is integrated with car

#### **Superstructure Owner**

B159

#### Rack Owner; Changed Name from Rack to Superstructure-New

Value does not carry forward for Equipment Group Change.

#### Validation Rule for B159

-Vehicular Flat cars without Integrated Superstructures must report a Superstructure Owner

#### NOTES:

• Report the primary reporting mark of the railroad or private company owning the superstructure.

#### Superstructure Lessee

B158

#### Rack Lessee; Changed Name from Rack to Superstructure-New

Value does not carry forward for Equipment Group Change.

#### Validation Rule for B158

-VFlat Superstructure Lessee should not be set if Superstructure is integrated with car

#### NOTES:

· Report the primary reporting mark of the railroad or private company leasing the superstructure.

#### SS Integrated With Car

B342

#### Superstructure Integrated with Car

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B342

Yes

#### **SS Original Cost Status**

**B**598

## The status of the SS Original Cost from the Original Cost Self Service system

Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B598

- Estimated
- Verified

#### Validation Rule for B598

- SS Orig Cost Status (B598) can only be updated by the Original Cost Self Service (OCSS) application if Verified (V)

- When the Original Cost Self Service (OCSS) application has verified the SS Original Cost and/or the SS Addition & Betterment, the SS Original Cost Status will be updated to 'V-Verified'.
- When superstructure has a new SS Rebuilt Date reported, the SS Original Cost Status (B598) will be set to 'E - Estimated'.
- New superstructures added to Umler will have the SS Orig Cost Status (B598) set to 'E'.

**SS Original Cost** A252

#### RR Superstructure Cost (\$)

Data is Confidential. Value does not carry forward for Equipment Group Change.

#### Range of Values for A252

Minimum	Maximum
4000	175000

#### Validation Rule for A252

- -If Superstructure Integrated with Car (B342) is not reported, Superstructure Original Cost (A252) must have a value.
- -Superstructure Original Cost on VFlat requires a Superstructure Owner other than privately owned
- -VFlat Superstructure Original Cost should not be set if Superstructure is integrated with car.
- SS Original Cost (A252) can only be updated by the Original Cost Self Service (OCSS) application when SS Orig Cost Status (B598) is Verified

SS Indicator A&B Δ296

#### Rack Indicator For Positive/Negative A&B

Data is Confidential. Value does not carry forward for Equipment Group Change.

#### Permissible Values for A296

Negative Р Positive

#### Validation Rule for A296

- -Superstructure Indicator for Positive/Negative A and B on VFlat must be reported if Superstructure Additions & Betterments is reported
- -Superstructure Indicator for Positive/Negative A and B on VFlat must not be reported if Superstructure Additions & Betterments is not reported
- -VFlat Superstructure Indicator for Positive/Negative A and B must not be reported if Superstructure Integrated with car is reported as Y
- -VFlat Superstructure Indicator A and B should not be set if Superstructure is integrated with car.
- SS A&B Indicator (A296) can only be updated by the Original Cost Self Service (OCSS) application when SS Orig Cost Status (B598) is Verified

SS Addition &Betterment

A004

#### Rack Addition & Betterment

Data is Confidential. Value does not carry forward for Equipment Group Change.

#### Range of Values for A004

Minimum	Maximum
0	35000

#### Validation Rule for A004

- -VFlat Superstructure Additions & Betterments must not be reported if the Superstructure Integrated with car is reported as Y
- -VFlat Superstructure Additions & Betterments should not be set if Superstructure is integrated with car.
- SS Addition & Betterment (A004) can only be updated by the Original Cost Self Service (OCSS) application when SS Orig Cost Status (B598) is Verified (V)

SS A&B Date Done

**R599** 

The date of the superstructure addition and betterment

Confidential; Do not carry forward on single/multiple clone.

Range of Values for B599

Minimum	Maximum
1/1/1900	12/31/9999

#### **Validation Rule for B599**

-SS A&B Date Done (B599) can only be updated by the Original Cost Self Service (OCSS) application if Verified (V)

#### Superstructure Deck Level Mandatory B406 Superstructure Deck Levels

Used in ETC Generation. Value does not carry forward for Equipment Group Change.

#### Permissible Values for B406

BCC Bi-Level, Convertible, Collapsible **BCR** Bi-Level, Convertible, Removable

BHI Bi-Level, High A Deck ΒI Bi-Level, Standard

TCC Tri-Level, Convertible, Collapsible **TCR** Tri-Level, Convertible, Removable

TRI Tri-Level, Standard UNI Uni-Level

#### Validation Rule for B406

- -When Superstructure Deck Levels (B406) is UNI, Superstructure Top Deck Setting Enclosed (A215) must be reported.
- -When Superstructure Deck Levels (B406) is BI, BCC, BCR, or BHI Superstructure Deck A/B Setting (A210) must be reported. Additionally, either Superstructure Top Deck Setting Enclosed (A215) or Top Deck Height No Roof (A263) must be reported.
- -When Superstructure Deck Levels (B406) is TRI, TCC, or TCR, Superstructure Deck A/B Setting (A210) and Superstructure Deck B/C Setting (A211) must be reported. Additionally, either Superstructure Top Deck Setting Enclosed (A215) or Top Deck Height No Roof (A263) must be reported.
- -When Superstructure Deck Levels (B406) is TRI, TCC, or TCR, Superstructure Deck A/B Setting (A210) and Superstructure Deck B/C Setting (A211) must be reported. Additionally, either Superstructure Top Deck Setting Enclosed (A215) or Top Deck Height No Roof (A263) must be reported.

**Autorack Category ARCG** 

#### Autorack Category is based from the Autorack Score

System Generated Field. This element is not eligible for Input. Value does not carry forward for Equipment Group Change.

#### NOTES:

- For an explanation of how the Autorack Category value is derived, please reference Manual of Standards and Recommended Practices Specification M-
- When the SS Built Date (SBDT) or the SS Rebuilt Date (SRDT) is changed, and an Autorack Inspection has been reported; the value for Autorack Category (ARCG) will be reset to 1.
- When the SS Integrated with Car (B342) equals Y, and a change in the Built Date (BLDT) should not reset the Autorack Category – only a change in the Rebuilt Date (RBDT) of the VFLT is changed, and an Autorack Inspection has been reported, the value of Autorack Category (ARCG) will be reset to 1.
- If SS Integrated with Car (B342) is blank, and a newer SS Rebuilt Date (SRDT) or Autorack Certification Inspection (ARC) date is entered, a new Autorack Inspection (ARI) is generated, and the Autorack Category is reset to "1"
- If SS Integrated with Car (B342) is "Y", and a newer Rebuilt Date (RBDT) or Autorack Certification Inspection (ARC) date is entered, a new Autorack Inspection (ARI) is generated, and the Autorack Category is reset to "1".

A212 **Superstructure Builder** Rack Manufacturer

Value does not carry forward for Equipment Group Change.

#### Permissible Values for A212

- **AMERICAN CAR & FOUNDRY**
- В JOHNSTOWN AMERICA
- THRALL TRINITY FREIGHT CAR, INC.

- **GREENVILLE STEEL CAR**
- G **GREENBRIER**
- Н PACIFIC CAR & FOUNDRY

SS Rate Indicator A019

Appurtenance Change Indicator, element utilized for Car Hire purposes

Value does not carry forward for Equipment Group Change.

#### Permissible Values for A019

- **7ero Rated** 0
- Ε **Estimated Hourly Charge**
- **Actual Hourly Charge**

#### Validation Rule for A019

- Superstructure Rate Indicator must not be reported if Superstructure Integrated with Car (B342) is Y
- Superstructure Rate Indicator must be reported if Superstructure Integrated with Car (B342) is blank

SS Deck A/B Setting A210

#### Rack Deck Setting (A/B Deck), lower deck closest to rail

Value does not carry forward for Equipment Group Change.

#### Range of Values for A210 Minimum Maximum 54 130

#### Validation Rule for A210

- -Superstructure Deck A/B Setting on VFlat for ETC V6, V7, V8 and V9 must be greater than or equal to 75 inches
- -VFlat Superstructure Deck A/B Setting for ETC V1, V2, V3, and V4 must be higher than 54 inches
- -Superstructure Deck A/B Setting on VFlat for ETC V1, V3 & V4 must be less than or equal to 74 inches
- -Superstructure Deck A/B Setting on VFlat for ETC V2 must be less than or equal to 80 inches
- -Superstructure Deck A/B Setting on VFlat for ETC V6 and V9 must be less than or equal to 92 inches, and V9 is not reported with Superstructure Deck Level (B406) as BHI
- -Superstructure Deck A/B Setting on VFlat for ETC V9 must greater than or equal to 100 inches and be less than or equal to 130 inches when Superstructure Deck Level (B406) is reported as BHI
- -Superstructure Deck A/B Setting on VFlat for ETC V7 must be less than or equal to 118 inches
- -Superstructure Deck A/B Setting (A210) cannot be reported when Superstructure Deck Levels (B406) is UNI. Superstructure Deck A/B Setting must be reported when Superstructure Deck Levels is any other value.
- -Superstructure Deck A/B Setting (A210) plus Superstructure Top Deck Setting (A215) cannot exceed Outside Extreme Height (A185) minus Platform Height Above Rail (A192) for a Bi-Level Superstructure Deck
- -Superstructure Deck A/B Setting (A210) plus Top Deck Height No Roof (A263) cannot exceed Outside Extreme Height (A185) minus Platform Height Above Rail (A192) for a Bi-Level Superstructure Deck
- -Superstructure Deck A/B Setting (A210) plus Superstructure Deck B/C Setting (A211) plus Superstructure Top Deck Setting (A215) cannot exceed Outside Extreme Height (A185) minus Platform Height Above Rail (A192) for a Tri-Level Superstructure Deck

SS Deck B/C Setting

Rack Deck Setting (B/C Deck), this only applies to the middle deck of a Tri-Level

Value does not carry forward for Equipment Group Change.

=Mandatory ▲=Used in ETC Generation A211

#### Range of Values for A211

Minimum	Maximum
54 inches	115 inches

#### Validation Rule for A211

- -Superstructure Deck B/C Setting on VFlats having ETC V0, V6, V8 or V9 is not permitted
- -Superstructure Deck B/C Setting on VFlat for ETC V1, V3 and V4 must be less than 74 inches
- -VFlat Superstructure Deck B/C Setting for ETC V1, V2, V3, V4, and V7 cannot be more than 54 inches.
- -Superstructure Deck B/C Setting (A211) must be reported when Superstructure Deck Levels (B406) is TRI, TCC, or TCR. Superstructure Deck B/C Setting cannot be reported when Superstructure Deck Levels is any other value.
- -Superstructure Deck B/C Setting (A211) must be reported when Superstructure Deck Levels (B406) is TRI, TCC, or TCR. Superstructure Deck B/C Setting cannot be reported when Superstructure Deck Levels is any other value.

#### SS Top Deck Setting A215 Rack Top Deck Setting Enclosed

Used in ETC Generation. Value does not carry forward for Equipment Group Change.

#### Range of Values for A215

Mange of Values for AZIS	
Minimum	Maximum
54 inches	180 inches

#### Validation Rule for A215

- -When Superstructure Deck Levels (B406) is any value other than UNI, either Superstructure Top Deck Setting Enclosed (A215) or Top Deck Height No Roof (A263) must be reported, but not both.
- -Superstructure Top Deck Setting (Enclosed) on VFlat must be greater than or equal to 65 inches for V6, V8, and V9, when Superstructure Deck Level (B406) as BHI
- -VFlat Superstructure Top Deck Setting (Enclosed) must be greater than 54 inches for V1, V2, V3 and V4
- -Superstructure Top Deck Setting (Enclosed) on VFlat must be greater than or equal to 60 inches for V7.
- -Superstructure Top Deck Setting (A215) cannot exceed Outside Extreme Height (A185) minus Platform Height Above Rail (A192) for a Uni-Level Superstructure Deck

Top Deck Height No Roof	A263
Top Deck Height No Roof	-

Affects Rating. Value does not carry forward for Equipment Group Change.

#### Range of Values for A263

Minimum	Maximum
108 inches	174 inches

#### Validation Rule for A263

- -VFlat with Top Deck Height No Roof can only be reported on Vflats with ETC codes of V3\_\_ or V8\_
- -VFlat with Top Deck Height No Roof for ETC V3\_ must be greater than or equal 12 feet 6 inches
- -VFlat Top Deck Height No Roof for ETC V3-- cannot be greater than 14 feet 06 inches
- -VFlat with Top Deck Height No Roof for ETC V8\_ must be less than or equal 11 feet 3 inches
- -VFlat Top Deck Height No Roof for ETC V8-- cannot be less than 9 feet 00
- -Top Deck Height No Roof (A263) cannot be reported when Superstructure Deck Levels (B406) is UNI.

Perforated Sidewalls	B146
Indicates the superstructure is equipped with perforated sidewalls	

Value does not carry forward for Equipment Group Change.

Permissible Values for B146

SS Door Edge Protection A074 **Door Edge Protection** 

Value does not carry forward for Equipment Group Change.

#### Permissible Values for A074

- DΩ No door edge protection
- D1 **Butyl Based tape**
- D2 Polyester Strap
- D3 Silicon Beading
- D4 **Tubing or Hose**
- D5 Vinyl extrusion or polymer
- D6 Closed cell foam
- D7 Thrall extruded
- D8 Thrall molded
- D9 Protection of unknown type
- DA **Pennsy Combination Kit**

SS Enclosure Type Mandatory	B153
Describes the superstructure enclosure type	•
Used in ETC Congration, Value does not carry forward for Equip	mont Group

Used in ETC Generation. Value does not carry forward for Equipment Group Change.

#### Permissible Values for B153

Full Height P Partial Height

#### Validation Rule for B153

- -Superstructure Enclosure Type on vehicular flats must be reported if Superstructure End Door Design (B154) is reported
- -Superstructure Enclosure Type on vehicular flats must not be reported if Superstructure End Door Design (B154) is not reported
- -P (Partial Height) Superstructure Enclosure Type on vehicular flats is only applicable to Superstructure End Door Design (B154) reported as either OTHR (Other)

#### SS End Door Design Mandatory B154 Indicates the superstructure end door design type

Used in ETC Generation. Value does not carry forward for Equipment Group Change.

#### Permissible Values for B154

PICK		OTHR	Other
RADL	Radial	RAP	RAVE, Portec
SEAL	Seal Safe	RATR	RAVE, Trinity
TFLD	TRI-FOLD	TARC	TRI-ARC
		UNKN	Unknown

#### SS End Door M941-90 Qual

**B155** 

Please reference Manual of Standards and Recommended Practices Specification M941

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B155

Yes

#### SS Chock Type Deck A Mandatory

B151

#### Superstructure Chock Type

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B151

- Zeftek (SCT) Co-Polymer Chocks (3rd Rail)
- Trinity (Thrall) Polymer Wedge Chocks (3rd Rail) В
- С Trinity (Thrall) Steel Wedge Chocks (3rd Rail)
- D Chocks, All others

- K Holden Low-Profile Grip-Lock Chocks (Grating)
- L Holland Low-Profile Tri-Low Steel Chocks (3rd Rail)
- M Holden Low-Profile Grip-Lock Chocks 48 (Grating)
- N Not Applicable
- P Zeftek Low-Profile Steel Hybrid Chocks (3rd Rail)
- Q TrinityRail Low Profile TTM (3rd Rail)
- R Holland Low-Profile Lock N Load Chocks 48 (Grating)
- S Zeftek LoPro Polymer Model 2 (3rd Rail)

#### Validation Rule for B161

- -SS Chock Type of N cannot be reported on SS Chock Type Deck A (B151), SS Chock Type Deck B (B160) or SS Chock Type Deck C (B161) when the Superstructure Deck Level (B406) is listed as TCC, TRL or TCR
- -SS Chock Type Deck C must be reported as N when the Superstructure Deck Level (B406) is listed as UNI, BCC, BI, or BRC

## Car Management

Pool Number P001
Unique number used to indicate the grouping of equipment for a particular purpose

Used for Transportation Codes. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add Back.

Pool Control TCPC
Pool Control

System Generated Field. Used for Transportation Codes. This element is not eligible for Input, Output or Query.

#### NOTES:

• For further explanation reference Appendices C and E.

User Routing Instructions TCUR

The routing instruction reported by the user

Used for Transportation Codes.

#### Permissible Values for TCUR

- 2 Trailer Service Rule 2
- G Contaminated commodity service
- M Mark canceled
- O Owner requested return
- U Unassigned equipment

#### NOTES:

• For further explanation reference Appendix E.

Umler Transportation Code TCOD
The type of assigned service, empty routing or restriction of the equipment

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES

• For further explanation reference Appendix E.

Transportation Cond Code TCCD

The AAR or FRA interchange restriction code

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

Mechanical Restriction TCME

User reported or system generated type of mechanical restriction

Used for Transportation Codes.

## Permissible Values for TCME

- S Scrap
- X AAR Interchange Restriction
- Y FRA Interchange Prohibited

#### NOTES:

For further explanation reference Appendix D.1

 Mech Restriction Reason
 TCMR

 The explanation of the Mechanical Restriction (TCME)

Used for Transportation Codes.

#### Permissible Values for TCMR

A Restricted Due to Age (Over 40-AAR, Over 50-FRA)

=Mandatory

- B Restricted Due to Air Brakes
- C Restricted Due to Axles
- D Restricted Due to Couplers and Couplers Parts
- F Restricted Due to Couplers Yokes
- G Restricted Due to Draft Gears
- J Restricted Due to Journal Bearing and Journal Lubrication
- N Restricted Due to Trucks
- P Restricted Due to Truck Side Frames
- T Restricted Due to Trucks Bolsters
- U Restricted by AAR or Owner
- W Restricted Due to Wheels
- X Restricted Due to Scrap or Early Warning
- Z Restricted Due to Umler Conflict (Not Valid for User Input)

#### NOTES:

- For further explanation reference Appendix D.2.
- The assignment of the Transportation Codes S\_, SX, XA, XZ and YA generate
  the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and
  mileage rate.

|--|

TCGR

#### The routing instruction generated by the system

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.5.

#### Loading Authority Fleet Status B597

Identifies when a car is listed on a fleet in the Loading Authority application

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B597

Y Yes

S Suspended

#### NOTES:

- When equipment is on a fleet the Loading Authority (LA) application will update the flag to 'Y – Yes'. When equipment is removed from a fleet the LA application will remove the 'Y – Yes'.
- When equipment is on a LA fleet that is suspended the LA application will
  update the flag to 'S Suspended'. When the equipment is on a LA fleet that
  is no longer suspended the LA application will update the flag to 'Y Yes'.

#### **Train Service**

#### **Restricted Speed Empty**

B180

Describes the maximum restricted speed the equipment can travel when empty

#### Range of Values for B180

Minimum	Maximum
5	95

**Restricted Speed Loaded** 

B181

Describes the maximum restricted speed the equipment can travel when loaded  $% \left( 1\right) =\left( 1\right) \left( 1\right$ 

#### Range of Values for B181

Minimum	Maximum
5	95

Shove Car to Rest B189
Identifies the car must be moved to rest by locomotive

#### Permissible Values for B189

Y Yes

Shove Adj. Car to Rest

Identifies the adjacent car must be shoved to rest by locomotive

#### Permissible Values for B188

Y Yes

Train Position Sensitive

B211

Indicates there is a physical reason, limiting its position on a train

#### Permissible Values for B211

Y Yes

**End of Train Only** 

B277

Indicates the equipment must be placed at the end of the train (including per AAR RP-2001)

#### Permissible Values for B277

Y Yes

**Check Trailing Tonnage** 

B044

Indicates the equipment has restrictions on trailing tonnage

#### Permissible Values for B044

/ Yes

**Curve Negotiate Exception** 

B178

Describes the requirement for negotiating a curve

#### Permissible Values for B178

- A Restrictive Curve Negotiability, Section 2.1.4 of M-1001
- B Does not meet all Chapter XI Curving Requirements

#### **Loaded Net Braking Ratio**

B551

Indicates calculated minimum loaded net braking ratio per AAR Specifications in place on built or rebuilt date (in percent).

System Generated Field. This element is not eligible for input.

#### Permissible Values for B551

- 11.0
- 8.5

#### NOTES:

- Loaded Net Braking Ratio is determined as follows:
  - If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Loaded Net Braking Ratio will be set to blank.
  - If Built Date (BLDT) is greater than or equal to 1/1/1972 and less than 1/1/2004, than loaded Net Braking Ratio is 8.5%.
  - If Built Date (BLDT) or Rebuilt Date (RBDT) is greater than or equal to 1/1/2004, then Loaded Net Braking Ratio is 11.0%.

#### Owner-Provided Loaded Net Braking Ratio

B552

Indicates an alternate minimum loaded net braking ratio provided by owner (in

#### Range of Values for B552

Minimum	Maximum
8.5	14.0

#### NOTES:

- Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net Braking Ratio (B551).
- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - Rebuilt Date (RBDT)
  - o Gross Rail Load/Weight (A266)
- Equipment Type Code (UMET)Empty/Load Device Eqpd (B075)

Empty Braking Ratio

B553

Indicates calculated empty braking ratio per AAR Specifications in place on built

Developed Notice for DEEO	
System Generated Field. This element is not eligible for input.	
or rebuilt date (in percent).	

#### Range of Values for B553 Minimum Maximum

#### 15.0 38.0

#### NOTES:

- Empty Braking Ratio is determined as follows:
  - o If Built Date (BLDT) or Rebuilt Date (RBDT) is less than 1/1/1972, then Empty Braking Ratio will be set to blank.

#### **Owner-Provided Empty Braking Ratio**

**B554** 

B020

#### Indicates an owner supplied alternate empty braking ratio (in percent).

#### Range of Values for B554

Minimum	Maximum
15.0	38.0

#### NOTES:

- Owner may enter a documented alternative minimum loaded net braking ratio in this field that is greater than the system calculated Loaded Net Braking Ratio (B551).
- When reported, the Owner-Provided Loaded Net Braking Ratio will be used in PTC stopping distance calculations.
- A change in value for the following elements will cause the Owner-Provided Loaded Net Braking Ratio to reset to blank:
  - o Rebuilt Date (RBDT)
  - Gross Rail Load/Weight (A266)
  - o Equipment Type Code (UMET)
  - o Empty/Load Device Eqpd (B075)

## Truck Components

Axle Spacing Distance Mandatory

The distance between axle centers on the same truck

#### Permissible Values for B020

53 53 Inches 54 54 Inches 55 55 Inches 60 60 Inches 61 61 Inches

62 62 Inches 63 63 Inches

64 64 Inches 65

65 Inches 66 66 Inches

68 68 Inches

70 70 Inches 71 71 Inches

72 72 Inches

73 73 Inches

74 74 Inches 76 76 Inches

78

78 Inches 99 Axle Space Unknown

**Truck Axle Count** B252

#### The number of axles per truck

Range of Values for B252 Minimum Maximum

#### Validation Rule for B252

- Sum of Truck Axle Counts must equal Axle Count (A024)

Journal Size Mandatory	A147
The size of the journal bearing	•

Affects Rating.

Permissible Values for A147

Α	3-3/4 X 7	В	4-1/4 X 8	С	5 X 9
D	5-1/2 X 10	Ε	6X11	F	6-1/2 X 12
G	7 X 12	K	6-1/2X9	M	7 X 9

#### Validation Rule for A147

- -4-axle equipment with Journal Size B and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 103,000 lbs.
- -4-axle equipment with Journal Size C and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 142,000 lbs.
- -4-axle equipment with Journal Size D and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 177,000 lbs.
- -4-axle equipment with Journal Size E and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 220,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 263,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1 or 2, must have Gross Rail Load (A266) of 286,000 lbs.
- -4-axle equipment with Journal Size G or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 315,000 lbs.
- -4-axle equipment with Journal Size G, K, or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1, must have Gross Rail Load (A266) of 286,000 lbs.

- A, B and C Journal Classes are prohibited in Interchange per Rule 90.B.4
- A, B, and C Journal Sizes are restricted from interchange and will receive the Mechanical Restriction XJ
- 4-axle equipment with 28 inch diameter, 1-wear wheels, is limited to a Gross Rail Load (A266) of 195,000 lbs.

#### Wheel Diameter Mandatory Δ294 The diameter of the wheels

#### Permissible Values for A294

28 28 Inches 33 33 Inches 36 Inches 38 38 Inches

#### Validation Rule for A294

- -Equipment with a Qualification for Increased Gross Rail Load (B344) of 1 and Journal Size (A147) of G or M must have a Wheel Diameter of 38
- -Equipment with a Qualification for Increased Gross Rail Load (B344) of 1 and Journal Size (A147) of K, must have a wheel diameter of 36
- -If Connected Unit Count (A020) is not reported, different Wheel Diameters cannot be reported

#### **Stability Device Equipped** B199 Indicates a stability device is present on the truck

Affects Rating

#### Permissible Values for B199

Yes

#### **Bolster Component ID B351 Bolster Component ID from Component Registry**

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### **Sideframe Component ID B352** Side Frame Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Wheelset Component ID	B350
Component ID from Component Registry	

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### **Validation Rule for A057**

- -If Rotary Coupler Style is reported, then Coupler Code must be a rotary coupler.
- -If Coupler Code is a rotary coupler, then Coupler Style must be R (Rotary).
- -Coupler Code of Type E Obsolete (Rule 16) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type E/F Obsolete (Rule 17) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type F Obsolete (Rule 18) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of FROTARY or EFROTARY cannot be reported for cars Built or Rebuilt on or after August 12, 2014.

#### NOTES:

- Obsolete: All Type D couplers are obsolete and should report code DOBS; cars with this coupler code will be restricted in interchange as discussed below
- Unknown: If the coupler code is unknown or if the code stamped on the coupler is illegible, the code BUNK FUNK, EFUNK, or LOCOUNK should be reported.
- Special: Codes ESPEC, FSPEC, and EFSPEC have been created to decline coupler bodies that have been manufactured specifically for the equipment owner and are not listed in the attached table.
- The codes FROTARY and EFROTARY cannot be reported for equipment Built or Rebuilt since August 12, 2014.

# Coupler Style *Mandatory*Describes the basic coupler design of the equipment

#### Affects Rating.

#### Permissible Values for B058

B Bottom Shelf D Double Shelf P Plain R Rotary

#### Validation Rule for B058

- -If Draft System Type (B073) is H (Hydraulic) then Coupler Style (B058) cannot be reported as M (Solid Drawbar) or L (Rotary Drawbar)
- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- -If Draft System Type (B073) of Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported
- -If Draft System Type (B073) is E then Coupler Style (B058) cannot be reported as L or R

#### \_\_\_\_

Inches of Travel B061
The number of inches a draft system will travel

#### Affects Rating.

#### Range of Values for B061

Minimum	Maximum
1	30

#### Validation Rule for B061

- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- -If Draft System Type (B073) of Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported
- -Inches of Travel cannot be greater than 20 for equipment with a Built Date (BLDT) on or after January 1, 1974

Draft System Type Mandatory	B073
Describes the draft gear/underframe cushion type	• _

#### Affects Rating.

- C Cushioning at Center of Car (COC)
- E Cushioning at End of Car (EOC)
- S Standard Draft Gear

Permissible Values for B073

- X Devices with less than 6 inches buff travel approved under AAR Standard S-060
- Y Devices with 6 to 10 inches of buff travel approved under AAR Standard S-060

#### **Validation Rule for B073**

- If Draft System Type (B073) is Standard Draft Gear (S), Inches of Travel (B061) cannot be reported
- If Draft System Type (B073) is reported as C, E, X, or Y then Inches of Travel (B061) must also be reported
- If Draft System Type (B073) of X, or Y is reported then Draft Gear Group/Cushion Unit Pocket (B562) cannot be reported
- If Draft System Type (B073) X is reported, the Inches of Travel (B061) value must be greater than or equal to 1 and less than 6
- If Draft System Type (B073) Y is reported, the Inches of Travel (B061) value must be greater than or equal to 6 and less than or equal to 10
- -If Draft System Type (B073) is S then Draft Gear Group/Cushion Unit Pocket (B562) may only be A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z (AAR Rule 21)
- -If Draft System Type (B073) is E then Draft Gear Group/Cushion Unit Pocket (B562) may only be EOC-1,EOC-1D, EOC-1B, EOC-2, EOC-2D, EOC-2B, EOC-3, EOC-3B,EOC-4, EOC-4B, EOC-5, EOC-5D, EOC-5B, EOC-6, EOC-6D, EOC-6B, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-8F, EOC-9, EOC-9B, EOC-9D, EOC-9E, EOC-10, EOC-10D, EOC-10B, EOC-10F, EOC-11, EOC-11D, EOC-11B,EOC-12, EOC-12D, EOC-12B, EOC-13, EOC-13B, EOC-14, EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16D, EOC-16B, EOC-17, EOC-17D, EOC-17B, EOC-18, EOC-18D, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-23, EOC-23B, EOC-24, EOC-24B, EOC-25E, EOC-26B, EOC-26F, or EOC-27D, or EOC-27E (AAR Rule 59)

B562

Draft Gear Group/Cushion Unit Pocket value as listed in AAR Field Manual Interchange Rule 21 and 59

Carry forward for Single Clone / Multi-Clone / Restencil / Add-Back / Equipment Group Change.

Permissible Values for B562EOC-1,EOC-1D, EOC-1B, EOC-2, EOC-2D, EOC-2B, EOC-3, EOC-3B,EOC-4, EOC-4B, EOC-5, EOC-5D, EOC-5B, EOC-6, EOC-6D, EOC-6B, EOC-7, EOC-7B, EOC-7B, EOC-8B, EOC-8B, EOC-9F, EOC-9B, EOC-9B, EOC-9B, EOC-10D, EOC-10B, EOC-10F, EOC-11D, EOC-11D, EOC-11B, EOC-12D, EOC-12D, EOC-12B, EOC-13, EOC-13B, EOC-14, EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16, EOC-16D, EOC-16B, EOC-17, EOC-17D, EOC-17B, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-23B, EOC-24B, EOC-24B, EOC-25E, EOC-26B, EOC-27D, EOC-27E, COC-17, COC-2, COC-3, COC-4, COC-5, COC-6, COC-7, COC-8 (AAR Rule 59).

A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, Z (AAR Rule 21).

#### Validation Rule(s) for B562

- -Draft Gear Group/Cushion Unit Pocket (B562) is mandatory for equipment built on or after June 13, 2019, unless Draft System Type (B073) is reported as X or Y
- -If Draft Gear Group/Cushion Unit Pocket (B562) is not equal to A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z, then Cushion Unit Type (B563) must be populated
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-6, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-9, EOC-9B, EOC-9D, EOC-10, EOC-10B, EOC-10D, EOC-14, EOC-14B, EOC-18D, EOC-23, EOC-23B, EOC-24, EOC-25E, EOC-26B, or EOC-27D then the Cushion Unit Type (B563) must be 1
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-9E, EOC-26F, or EOC-27E, then the Cushion Unit Type (B563) must be 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-11, EOC-12, EOC-13, EOC-13B, EOC-15, EOC-15B, EOC-15D, EOC-17, EOC-17B, EOC-17D, EOC-18, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-24B, COC-3, COC-5, or COC-7 then the Cushion Unit Type (B563) must be 1 or 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-8F or EOC-10F then the Cushion Unit Type (B563) must be 2 or 3
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-5, EOC-5B, EOC-5D, EOC-6, EOC-6B, EOC-6D EOC-11B, EOC-11D, EOC-12B, EOC-12D, or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-16D, or COC-1 then the Cushion Unit Type (B563) must be 1, 2, or 4
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D, EOC-3, EOC-3B, EOC-4, EOC-4B, or COC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, or 4
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1, EOC-1B, EOC-1D, or EOC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or S
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-8 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or 5
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1D, EOC-2,EOC-2D, EOC-2B, EOC-3, EOC-3B, EOC-5, EOC-5D, EOC-5B, EOC-6D, EOC-7, EOC-7B, EOC-9B, EOC-9D, EOC-9E, EOC-10D, EOC-11, EOC-11B, EOC-11D, EOC-12D, EOC-14,EOC-14B, EOC-15, EOC-15D, EOC-15B, EOC-16D, EOC-17D, EOC-23, EOC-23B, EOC-27D, or EOC-27E then the Inches of Travel (B061) must be 10
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-19, EOC-19B, EOC-22, EOC-22B, or EOC-25E then the inches of travel must be 12
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-20 or EOC-20B then the Inches of Travel (B061) must be 14
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1B, EOC-4 EOC-4B, EOC-6, EOC-6B, EOC-8, EOC-8B, EOC-8F, EOC-10, EOC-10B, EOC-10F, EOC-12, EOC-12B, EOC-13, EOC-13B, EOC-17, EOC-17B, EOC-18, EOC-18D, EOC-18B, EOC-21, EOC-21B, EOC-24, or EOC-24B then the Inches of Travel (B061) must be 15
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-2, COC-3, COC-4, COC-5, COC-6, or COC-8 then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 1 or 2, then the Inches of Travel (B061) must be 20
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 4, then the Inches of Travel (B061) must be 18
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 2, then the Inches of Travel (B061) must be 20
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 1, then the Inches of Travel (B061) must be 30
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1 then the Inches of Travel (B061) must be 10, 12, or 15
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-26, then the Inches of Travel (B061) must be 18

#### Note:

Reference AAR Field Manual Interchange Rule(s) 21 and 59.

#### **Cushion Unit Type B**563 Cushion Unit Type value as listed in AAR Field Manual Interchange Rule 21 and

Carry forward for Single Clone / Multi-Clone / Restencil / Add-Back / Equipment Group Change.

#### Permissible Values for B563

- 1 Type 1
- 2 Type 2

- 3 Type 3
- 4 Type 4
- 5 Type 5
- S Type S

#### Validation Rule(s) for B563

- Cushion Unit Type (B563) is mandatory for equipment built on or after June 13.2019.
- -If Draft Gear Group/Cushion Unit Pocket (B562) is not equal to A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z, then Cushion Unit Type (B563) must be populated.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-6, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-9, EOC-9B, EOC-9D, EOC-10, EOC-10B, EOC-10D, EOC-14, EOC-14B, EOC-18D, EOC-23, EOC-23B, EOC-24, EOC-25E, or EOC-26B then the Cushion Unit Type (B563) must be 1.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-9E, EOC-26F, or EOC-27E, then the Cushion Unit Type (B563) must be 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-11, EOC-12, EOC-13, EOC-13B, EOC-15, EOC-15B, EOC-15D, EOC-17, EOC-17B, EOC-17D, EOC-18, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-24B, COC-3, COC-5, or COC-7 then the Cushion Unit Type (B563) must be 1 or 2.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-8F or EOC-10F then the Cushion Unit Type (B563) must be 2 or 3.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-5, EOC-5B, EOC-5D, EOC-6, EOC-6B, EOC-6D EOC-11B, EOC-11D, EOC-12B, EOC-12D, or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-16D, or COC-1 then the Cushion Unit Type (B563) must be 1, 2, or 4.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D, EOC-3, EOC-3B, EOC-4, EOC-4B, or COC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, or 4.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1, EOC-1B, EOC-1D, or EOC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, 4,
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-8 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or 5.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 1 or 2, then the Inches of Travel (B061) must
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 4, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 2, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 1, then the Inches of Travel (B061) must be

## **Unit Segment Components**

**Unit Equipment Group** A307

Describes the equipment type of the platform

#### Affects Rating.

#### Permissible Values for A307

BOXC Box Car FLAT Flat Car **GOND HOPP** Gondola Hopper Intermodal Flat **IFLT** TANK Tank Car

VFI T Vehicular Flat

#### Validation Rule for A307

- -Unit Equipment Group cannot be reported if the Connected Unit Count (A020) is not reported
- -Unit Equipment Group can only be reported if Connected Unit Count (A020) is reported

#### **Unit Tare Weight**

A299

The unit segment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

#### Range of Values for A299 Minimum Maximum 65000 136000

#### Validation Rule for A299

- -Unit Tare Weight must not be reported if the Connected Unit Count (A020) is not reported
- -Unit Tare Weight must be reported if Connected Unit Count (A020) is
- -Unit Segment Tare Weights must add up to the Total Tare Weight (A259)
- -Unit Tare Weight (A299) value must be reported to the nearest 100

#### **Unit Load Limit**

A300

The maximum permissible weight of the commodity that can be loaded into the unit segment, reported in pounds

#### Range of Values for A300

Minimum	Maximum
36000	150000

#### **Validation Rule for A300**

- -Unit Load Limit can not be reported if the Connected Unit Count (A020) is not reported
- -Unit Load Limit must be reported if Connected Unit Count (A020) is reported
- -Unit Segment Load Limits must add up to the Load Limit (LDLT)

#### **Unit Inside Length**

A301

#### The inside length of each unit segment

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A301

Minimum	Maximum
69 ft 0 inches	99 ft 3 inches

#### Validation Rule for A301

- -Unit Inside Length can only be reported if Connected Unit Count (A020) is
- -Unit Inside Length must be reported if Connected Unit Count (A020) is reported

**B569** 

#### Brake valve emergency portion part number

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Emergency Valve Part Number is system-generated from a Emergency Brake Valve Inspection.

#### Service Brake Valve CID

**B357** 

#### Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Service Valve COTS Date

**B564** 

#### Brake valve service portion recondition date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Service Valve COTS Date is system-generated from a Service Brake Valve Inspection.

#### Service Valve OEM Warranty Date

**B**565

#### Brake valve service portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

Service Valve OEM Date is system-generated from a Service Brake Valve Inspection.

#### **Service Valve Part Number**

**B566** 

#### Brake valve service portion part number

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

Service Valve Part Number is system-generated from a Service Brake Valve Inspection.

#### Slack Adjuster CID

B359

#### Component ID from Component Registry

Data is Confidential. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Miscellaneous

#### **Umler Effective Date**

The date the rating activity (pre-registration, modification, etc.) is expected to

This element is not eligible for Query. Does not Carry Forward.

#### Validation Rule for EFDT

-Effective Date cannot be set to more than 13 months in the future.

=Mandatory ▲=Used in ETC Generation

#### NOTES:

Effective Date will default to the 1st of the following month that equipment

#### Inspection

#### **ABT Due Date (Repair Track)**

**DU13** 

The due date of the air brake test per AAR Field Manual Rule 3

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### **ABT 5-8 Year Due Date**

**DU58** 

The 5-8 year due date for the air brake test (ABT) after the ABT Due Date (Repair Track)

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### SS Inspection Due Date

DUAI

#### **Autorack Inspection Due Date**

System Generated Field. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add Back.

#### **Inspection Date Done**

The date the inspection was completed; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Validation Rule for DTDN

-The inspection date must not be 60 days before the Build Date

**Exterior Door** 

**FXDR** 

#### **Exterior Door**

Data is Confidential. This element is not eligible for Input, Output or Query. Does not Carry Forward.

#### **Exterior Roof Sheets**

**EXRS** 

#### **Exterior Roof Sheets**

Data is Confidential. This element is not eligible for Input, Output or Query. Does not Carry Forward.

#### **Exterior Shear Panel**

**EXSP** 

#### **Exterior Shear Panel**

Data is Confidential. This element is not eligible for Input, Output or Query. Does not Carry Forward.

#### **Exterior Side Screens**

**EXSS** 

#### **Exterior Side Screens**

Data is Confidential. This element is not eligible for Input, Output or Query. Does not Carry Forward.

#### **Inspection Due Date**

The due date of the next inspection; used for all inspection types reported on

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

## **Interior Door**

**INDR** 

#### Interior Door

Data is Confidential. Does not Carry Forward.

## Inspector ID

INID

#### Inspector ID

Does not Carry Forward.

## **Interior Side Posts**

INSI

#### **Interior Side Posts**

Data is Confidential. Does not Carry Forward.

#### **Inspection Performer**

The SCAC that completed the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### **Inspection Reporter**

RFPT

The SCAC that reported the inspection; used for all inspection types reported on

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Location/SPLC

SPLC

The SPLC of the inspecting location; used for all inspection types reported on

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### **Top Deck Surface**

**TPDS** 

#### Top Deck Surface

Data is Confidential. This element is not eligible for Input, Output or Query. Does not Carry Forward.

#### Underside of Deck

LINOD

#### **Underside Of Deck**

Data is Confidential. This element is not eligible for Input, Output or Query. Does not Carry Forward.

#### **Insp Service Valve COTS Date**

**B570** 

#### Brake valve service portion recondition date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

- Reports of 9999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYY

#### Insp Service Valve OEM Warranty Date

Brake valve service portion Original Equipment Manufacturer warranty date

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### NOTES:

- Reports of 999999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYYYY

#### **Insp Service Valve Part Number**

**B572** 

#### Brake valve service portion part number

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Insp Emergency Valve COTS Date

**B573** 

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

Brake valve emergency portion recondition date

Reports of 9999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.

· Valid date format: MMYY

=Mandatory ▲=Used in ETC Generation = Affects Rating

**– 205 –** \*=Conditionally Mandatory

#### Insp Emergency Valve OEM Warranty Date

B574

Brake valve emergency portion Original Equipment Manufacturer warranty date

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### NOTES:

- Reports of 999999 will be allowed in case the date is illegible and the valve cannot be replaced immediately.
- Valid date format: MMYYYY

**Insp Emergency Valve Part Number** 

B575

Brake valve emergency portion part number

System generated element. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

Insp Service Valve Location Mandatory

B576

Brake valve service portion location

. Value does not carry forward for Single Clone / Multi-Clone.

Insp Emergency Valve Location Mandatory

B577

Brake valve emergency portion location reported on an emergency brake valve inspection

Value does not carry forward for Single Clone / Multi-Clone.

= Affects Rating

# General Status Code Mandatory USCD Identifies the current operational state Does not Carry Forward.

Does not Carry Forward.

#### Permissible Values for USCD

A ACTIVE I INACTIVE

P PRE-REGISTERED

#### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-Registered.
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID	0001
The equipment stenciled number	

#### Validation Rule for 0001

-Equipment Number must not be larger than 6 digits (i.e., 999999)

#### NOTES:

- Equipment ID includes the mark and number stenciled on the equipment.
   Marks can be up to 4 characters and number up to 6 digits (i.e.,
   ABCD999999).
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

Mechanical Designation Mandatory	UMMD
Equipment description without physical dimensions	•

Used for Transportation Codes.

#### Permissible Values for UMMD

D Locomotive

# Equipment Descriptor Mandatory Additional information about the type of equipment used in conjunction with the Mechanical Designation to generate the Equipment Type Code (ETC) for Intermodal Flat, Locomotive, Chassis, Container, and Trailer equipment groups

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B341

DA Auxiliary Unit
DE All Electric
DFGT Freight Diesel-Electric
DNCF Non-Cab Freight
DNCP Non-Cab Passenger
DPAS Passenger Diesel-Electric
DSTM Steam (New)

DSW Switching

#### **Equipment Type Code**

**UMET** 

An alpha numeric code that describes the physical attributes of equipment

System Generated Field. This element is not eligible for Input.

#### NOTES:

• Please Refer to Appendix I for More information Regarding ETC Generation

Built Date Mandatory	BLDT
The date the construction of the equipment is complete	•

Data is Confidential. Used for Transportation Codes. Affects Rating. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for BLDT

Minimum	Maximum
1/1/1900	12/31/9999

#### **Validation Rule for BLDT**

- -Built Date must not be in the future for equipment in Active Status
- -Prior and target equipment's Built Date (BLDT) must match

#### NOTES:

- Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

Rebuilt / ILS Date	RBDT

The date the re-construction of the equipment is complete

Data is Confidential. Value does not carry forward for Single Clone /  $\,$  Multi-Clone.

#### Range of Values for RBDT

Minimum	Maximum
1/1/1900	12/31/9999

#### **Validation Rule for RBDT**

- -Rebuilt/Increased Life Service Date must be after the Built Date (BLDT)
- -Rebuilt Date is required for Extended Service Code (A096) 1, 2, or 3 for Increased Life Service
- -Rebuilt Date is required for Extended Service Code (A096) R for Rebuilt, or V for 65 years of service
- -If Rebuilt Date is reported then the Extended Service Code (A096) must be reported as R for Rebuilt, V, 1, 2, or 3 for Increased Life Service

#### NOTES:

- Railroad cars -- applicable only to cars meeting status as provided in both STB Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office Manual.
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt Date unless car has been approved by the AAR.

Rebuilt Flag

RBFL

Identifies the equipment is nearing its end of life cycle

Data is Confidential. System Generated Field. This element is not eligible for

#### Permissible Values for RBFL

N No Y Yes

# Owner *Mandatory*Primary reporting mark of the railroad or private company owning the car

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### NOTES:

 Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.

Equipment Group Mandatory	0002
Identifies the various major car types	●
rachances are various major car types	

Used for Transportation Codes. Affects Rating.

Lessee LESE

The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### **Validation Rule for LESE**

-Umler Owner (UMOW) and Lessee are not allowed to be equal

#### **NOTES**

 In order to assign privately marked cars to a pool, a railroad reporting mark must be reported.

●=Mandatory ▲=Used in ETC Generation = Affects Rating -209 - ●= Blue Card \*=Conditionally Mandatory June 2025

FINN

#### **Data Specification Manual**

#### MNPT **Maintenance Party**

The parent reporting mark of the company responsible for the maintenance and repairs of the equipment

Does not Carry Forward.

**Mark Owner Category** B201

#### The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

#### Permissible Values for B201

- В US Private
- Canadian Private C
- Foreign Private
- Н Canadian Class II
- 1 Canadian Class I
- Mexican Class I J
- Κ Canadian Class III
- M Mexican Private
- Ν US Private Steamship
- 0 Canadian Private Steamship
- P Mexican Private Steamship
- Q Foreign Private Steamship
- R US Class II Railroad
- U US Class I Railroad
- V US Class III Railroad
- Mexican Class II Railroad W
- Mexican Class III Railroad

#### NOTES:

• This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry.

**Prior Equipment ID PRID** The previous reporting mark and number of the equipment

Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for PRID

- -Prior and target equipment's Built Date (BLDT) must match
- -The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

#### NOTES:

Prior ID enables equipment records to share the same historical lineage. Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

**Last Update Date B122** Date of the last Umler element change

System Generated Field. This element is not eligible for Input.

**Equipment Add Date** B082 Date the reporting mark and number was added to the Umler system

System Generated Field. This element is not eligible for Input.

**Status Change Reason USCR** 

Identifies the reason for the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

#### **Permissible Values for USCR**

- Initial Load Т
- М Movement
- 0 Status Changed Manually
- R Restencil

#### NOTES:

- If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

**Status Change Date USCT** 

Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

**Equipment Identification** 

Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

• Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections.

**Conflict Status** B050

Identifies the escalation level of equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B050

- Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Date of Original Conflict** B063

The date the equipment was originally placed in the current conflict

System Generated Field. This element is not eligible for Input.

**Next Conflict Status** B135

Identifies the next escalation level of an equipment in active conflict System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B135

- Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Notice Indicator** B137 Identifies equipment in error in Umler Notice Management

System Generated Field. This element is not eligible for Input.

**Conflict Status Next Date** B062 The date the conflict status will be escalated

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

A070 Rate Indicator Indicates the rate type applicable to the unit

System Generated Field. Used for Transportation Codes. Affects Rating. This

=Mandatory ▲=Used in ETC Generation = Affects Rating

**-210 -**

June 2025

element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for A070

- 0 Zero-Rated Due to Conflict Errors
- Zero-Rated Scrap (S ,SX), AAR Overage (XA), FRA Overage (YA), Umler Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].

#### NOTES:

• If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.

First Movement Date	USAT
The first movement date under the stenciled mark of the equipment	

This element is not eligible for Input. Does not Carry Forward.

Equipment Add Company	B083
The reporting mark of the company that added the equipment	

System Generated Field. This element is not eligible for Input.

Registration Reason	B174
The code indicating the reason this equipment is added	

#### Does not Carry Forward. Permissible Values for B174

New Add-Back N Ρ Pending Restencil R Restencil

Restencil Program Ind	B177
Identifies the equipment is under a restencil program	

#### Permissible Values for B177

Yes

Delete Reason Code	B064
A code that designates the reason the equipment has been deleted	

Value does not carry forward for Add Back.

#### Permissible Values for B064

- Restenciled Α
- D Destroyed or wrecked
- ı Lease terminated, removed from fleet
- Ρ Retired unserviceable beyond economic repair
- R Rebuilt
- S Sold Serviceable
- W Over age retired for dismantling
- Υ Error, reporting did not exist

Dimension

Dimension	
Plate Code	A046
Indicates the extreme height and width clearance of the equipment	

#### Permissible Values for A046

- Plate Code B В
- Plate Code C
- Plate Code E Ε
- F Plate Code F
- G Clearance Code G
- Plate Code L

=Mandatory

- Μ Plate Code M
- Plate Code N

#### NOTES:

- For a description of Plate Codes, please see Appendix J at the back of this manual.
  - o Report B: If clearance does not exceed Plate B
  - o Report C: If clearance is greater than Plate B. but does not exceed Plate C
  - o Report E: If clearance is greater than Plates B and C, but does not exceed
  - o Report F: If clearance is greater than Plates B, C and E, but does not exceed Plate F
  - o Report M: If clearance does not exceed Plate M.
  - o Report G: If clearance exceeds Plates B, C, E, F, L, M, and N.
- There is no AAR Plate G. Clearance Code G is included in Umler to represent equipment that does not fit any existing AAR clearance plates.
- Plate L is not reportable for locomotives built on or after January 1, 2018.
- For ARTICULATED/MULTI-UNIT SET report the most restrictive clearance plate of UNIT in the set.

Outside Length <i>Mandatory</i>	OSLG	
The outside length over pulling faces of couplers in normal position	•	

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for OSLG Minimum Maximum 37 ft 0 inches 140 ft 0 inches

- For connected unit cars report the maximum coupled length of the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

Outside Extreme Width Mandatory	A186
The outside extreme width of the equipment	•

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A186 Minimum Maximum 9 ft 0 inches 11 ft 10 inches

#### Validation Rules for A186

- Outside Extreme Width must not exceed 10 feet 8 inches for Plate Codes B, C, E, F, or N

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

#### A185 **Outside Extreme Height** Height from top of rail to extreme projecting height

Displayed in feet and inches on the Web. Stored in inches.

Range of Values for A185		
Minimum	Maximum	
6 ft 0 inches	18 ft 0 inches	

#### 6 ft 0 inches | 18 ft 0 inches Validation Rules for A185

-Outside Extreme Height for Plate Code N must be less than or equal to 17 feet

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

**Truck Center Length** A276 The length between the centers of the two truck systems

Displayed in feet and inches on the Web. Stored in inches.

## Range of Values for A276

Minimum	Maximum	
15 ft 0 inches	76 ft 11 inches	

• For connected unit cars report the dimension of the largest unit in the set.

NN	Does not apply
VT	P.C. knockdown time varies with train speed
VV	D.C. will not be a closure

XX P.C. will not knockdown Cab Signal Configuration Mandatory **CBSI** Cab Signal Configuration

# Permissible Values for CBSI

Double Ended Not Equipped S Single Ended

# Validation Rule for CBSI

-Locomotive Cab Signal Configuration must agree with Cab Signal Type, and cannot be Not Equipped N if the Cab Signal I Magnetic Valve - no C.C.S (A) or Not Equipped (N)

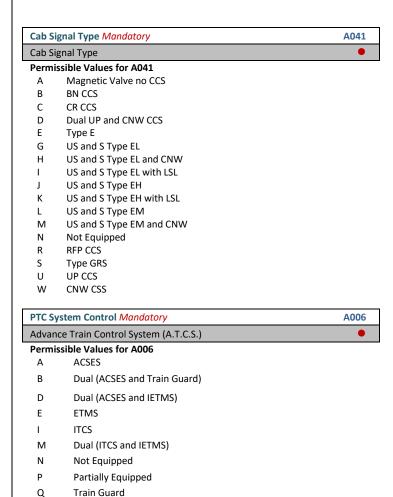

#### **Fuel Tank Capacity** A113 **Fuel Tank Capacity**

# Range of Values for A113

Minimum	Maximum
0	0
500	8200

Validation Rule for A113

-Locomotives with Equipment Descriptor of DA reporting anything other than a Fuel Tank Capacity of 0, must be reported within the minimum and maximum range specifications of 1000 to 8200.

### **Fuel Preheater Equipped** A110 **Fuel Preheater**

# Permissible Values for A110

ATCS **IETMS** 

Yes

Т

**EPA Emissions Tier Level** B081 Indicates the EPA emissions Tier level for the diesel engine on a Locomotive.

# Permissible Values for B081

- Tier 0 Α
- В Tier 0+
- C Tier 1
- D Tier 1+
- Ε Tier 2
- F Tier 2+
- G Tier 3
- Tier 4
- ı Tier 4C
- Ν None - Post 1973 Locomotives that are currently non Tier but will become Tier at first Engine change.
- Exempt Locomotive will never require a Tier engine. All pre-1973 Locomotives are exempt unless replaced with a Tier engine, then it becomes Tier forever

Z Export Only - Subject to restriction of operating < 25 miles within US Border and certified as "export-only/not for use in US"</p>

#### Validation Rule for B081

Locomotives

 Only Locomotives built prior to January 1, 1973 are allowed exemptions from EPA emissions standards

Yes

**Distributed Power Eqpd** B070 The unit is equipped with a distributed power device

# Permissible Values for B070

Yes

Ν No

#### Validation Rule for B070

-Distributed Power Eqpd (B070) must be reported effective December 9, 2021

**DP System Type** The Distributed Power system type

# Permissible Values for B578

13 Locotrol 3 IPM IPM

LXA LXA

Validation Rule for B578

-DP System Type (B578) must be reported if Distributed Power Eqpd (B070) is

#### NOTES:

• IPM includes EIPM.

# **DP Remote EOT Emergency Test**

**B579** 

The Distributed Power system is capable of running an end of train Emergency

# **Permissible Values for B579**

Yes

N No

# Validation Rule for B579

-DP Remote EOT Emerg Test (B579) must be reported if Distributed Power Eqpd (B070) is Y.

#### NOTES:

- This feature allows verification of end of train emergency braking functionality when using a tail end DP Remote and no traditional EOT device. DP accomplishes this by providing an EOT test button in the DP Remote Session screen on the DP Lead locomotive, requiring the closing of the angle cock behind the Lead, and putting the Lead's automatic brake handle in emergency. DP sends a message to all mid-train Remotes to ignore the impending emergency command and ensures the tail-end Remote is able to initiate an emergency on its own, based on the received command, not the brake pipe. This functionality is similar to a conventional EOT Dump test, which is performed after HOT-EOT arming.
- To use this functionality, all DP units on the train must be equipped with this feature.

**DP BP Test Supplemental Reduction** 

B580

The Distributed Power system has an enhanced brake pipe test algorithm

Permissible Values for B580

Υ Yes

N Nο

#### Validation Rule for B580

-DP BP Test Supplemental Reduction (B580) must be reported if Distributed Power Eqpd (B070) is Y.

NOTES:

= Affects Rating

**Canadian Serve Qualified** 

Permissible Values for B251

International Service

**B251** 

• This functionality improves the likelihood of passing the DP brake pipe test on longer trains and in cold temperatures. After failing a brake pipe test, the algorithm makes a supplemental reduction on the next test. To use this functionality, only the Lead DP unit must be equipped with this feature.

#### DP Comm Loss Idle Down BV Cut In

The Distributed Power system is capable of automatically cutting in the brake valve after Comm Loss Idle Down (CLID)

#### Permissible Values for B581

Yes

N Nο

#### Validation Rule for B581

-DP Comm Loss Idle Down BV Cut In (B581) must be reported if Distributed Power Eqpd (B070) is Y.

#### NOTES:

- This feature enables automatic recovery of the brake valve on a DP Remote after a CLID event if certain conditions are met. Prior to the CLID, the DP must have been in NORMAL mode and the brake valve Cut-in (i.e., the CLID was due to unexpected airflow). After the CLID, if the following conditions are met, the Remote will automatically Cut-in the brake valve without requiring a brake application/release: (1) radio communications is restored within 90 minutes of CLID: (2) the Lead is commanding automatic brake RELEASE at the time radio communication is restored; and (3) operator commands Remote back to NORMAL mode prior to the train being stopped for longer than 10 minutes. If any of the above conditions are not met, the Remote will enforce normal CLID recovery interlocks and will require the operator to perform the usual brake application and release.
- To use this functionality, only the DP Remote must be equipped with this feature.

#### DP DB Comm Loss Idle Down At 0 MPH

**B582** 

The Distributed Power system on a Remote is capable of idling the Dynamic Brake when locomotive speed reaches zero mph after a Comm Loss Idle Down event

#### Permissible Values for B582

Yes

N Nο

# Validation Rule for B582

-DP DB Comm Loss Idle Down At 0 MPH (B582) must be reported if Distributed

#### NOTES:

• To use this functionality, only the DP Remote unit must be equipped with

#### DP Setout Mode With BV Cut In

B583

The Distributed Power system has the ability to leave the Remote Brake Valve Cut-In while in SETOUT Mode

# Permissible Values for B583

Yes Υ

No

# Validation Rule for B583

-DP Setout Mode With BV Cut In (B583) must be reported if Distributed Power Eapd (B070) is Y.

#### NOTES:

- This feature allows the DP Remote to maintain the pressure in the brake pipe, avoiding an Emergency Application.
- To use this functionality, both the Lead and individual Remote must be equipped with this feature.

# **DP Incremental Link/Unlink**

**B584** 

The Distributed Power system on a Remote is capable of being linked and unlinked without impact to other linked units

### Permissible Values for B584

Yes

#### Validation Rule for B584

-DP Incremental Link/Unlink (B584) must be reported if Distributed Power Eqpd (B070) is Y.

#### NOTES:

- The feature allows an operator to link new Remotes or drop linked Remotes without unlinking the train.
- To use this functionality for incremental linking, the Lead must be equipped with this feature.
- · To use this functionality to unlink a Remote, both the Lead and the Remote must be equipped with this feature.

**DP Suspend Mode** 

**R585** 

The Distributed Power system is capable of Suspend Mode enabling a Remote to be operated locally in a conventional manner

# Permissible Values for B585

Brake Pipe Test is not required on exiting Suspend Mode YBPT Brake Pipe Test is required on exiting Suspend Mode N No

#### Validation Rule for B585

-DP Suspend Mode (B585) must be reported if Distributed Power Eqpd (B070)

#### NOTES:

- This feature allows a DP Remote to be temporarily suspended from DP operation. In Suspended Mode, the DP Remote is functions as a conventional, non-DP unit, providing a local operator full control over propulsion and air brakes to perform movements. In Suspended Mode, the DP system maintains link information. After movements are completed and the train is recoupled, the operator can resume normal DP operation from the DP Lead without having to re-link the train. The need for the operator to run a Brake Pipe Test depends on the permissible value of this element.
- To use this functionality, the Lead and the individual Remote being suspended must be equipped with this feature. To resume operations without a brake pipe test only the Lead must have the NBPT attribute.

DP Lead Remote Swap

B586

The Distributed Power system is capable of turning the DP Lead into the DP Remote and the Remote into the Lead

#### Permissible Values for B586

٧ Yes

No

# Validation Rule for B586

-DP Lead Remote Swap (B586) must be reported if Distributed Power Eqpd (B070) is Y.

#### NOTES:

- This feature enables swapping of the Lead and Remote configuration in a DP train without undergoing a unlink/relink procedure.
- To use this functionality, the Lead and Remotes must be equipped with this

Loco Controlled Tractive Effort

**B587** 

The Locomotive is capable of Controlled Tractive Effort (CTE)

#### **Permissible Values for B587**

Υ Yes

Ν No

# Validation Rule for B587

-Loco Controlled Tractive Effort (B587) must be reported if Distributed Power Eqpd (B070) is Y.

• This is a Locomotive characteristic, not a Distributed Power characteristic.

**DP Selection of CTE** 

The Distributed Power system on a DP Lead is capable of selecting Controlled Tractive Effort (CTE) on a DP Remote

**Permissible Values for B588** 

=Mandatory ▲=Used in ETC Generation

L	Linking
Α	Anytime
N	No

#### **Validation Rule for B588**

-DP Selection of CTE (B588) must be reported if Distributed Power Eqpd (B070) is Y.

#### NOTES:

- To use this functionality, the Lead must be equipped with this feature and the Remote should be equipped with CTE.
- On Linking: After linking, DP presents the operator with the choice of putting the Remote into RUN CTE or RUN FTE mode. The Remote will stay in the chosen RUN mode until the end of the DP session. To toggle the Remote between CTE and FTE, the operator must stop, unlink, and relink. Note, the Lead does not know if the Remote supports CTE. If the operator selects RUN CTE mode, the Lead will send a CTE command to the Remote and an unsupported Remote will respond with a status message saying it is still in FTE.
- Anytime: After linking, DP allows the operator to toggle between CTE and FTE at any time (but must be stopped). DP does not require unlinking and relinking. Note: the Lead does not know if the Remote supports CTE. The operator can attempt to change the Remote RUN mode to CTE, but the unsupported Remote will respond saying it is still in FTE.

# **DP Elimination Transition Penalty**

B589

The Distributed Power system will not enforce a penalty brake application upon entering DP

#### Permissible Values for B589

Υ Yes Ν No

# **Validation Rule for B589**

-DP Elimination Transition Penalty (B589) must be reported if Distributed Power Eqpd (B070) is Y.

#### NOTES:

- On a Remote, the DP system will no longer initiate a penalty brake application when DP is set up that locomotive.
- On a Lead, the DP system will no longer initiate a penalty brake application when linking.
- To benefit from this functionality, the Lead and all Remotes must be equipped with this feature.

# **DP Remote Dynamic Brake Holding During PCS**

**R591** 

The Distributed Power system is capable of remote DB Holding During PCS

# Permissible Values for B591

Υ Yes

Nο

#### Validation Rule for B591

-DP Rem Dyn Brake Hold PCS (B591) must be reported if Distributed Power Eqpd (B070) is Y

# NOTES:

- DP Feature ID: F05
- The pneumatic control switch (PCS) on a Distributed Power Remote opens upon penalty and emergency air brake applications and certain system faults. Currently, Distributed Power's response to PCS open is to immediately transition the Remote to throttle Idle. This holding feature allows the Distributed Power Remote to maintain Dynamic Braking when PCS opens to help stop a moving train more quickly or prevent a stopped train from accelerating.
- To use this functionality, all Distributed Power units on the train must be equipped with this feature.

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

# Range of Values for A184

Minimum	Maximum
0	9999999

# Validation Rule for A184

- -Original Cost must be equal to the Ledger Value if there are no Additions
- -Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported.
- -Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost
- -Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

#### NOTES:

- Original Cost is never altered. It is the cost of the equipment to the original owner.
- For railroad-marked cars, report in US dollars the original ledger value of the original owner For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24
- The original cost is used in the settlement of AAR Interchange Rule 107 Office Manual.
- For connected unit cars report the total original cost for all units in the set.

- Numeric, applicable to all railroad-marked cars Also, applicable to privately marked covered hopper (LO) cars.
- Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

#### Ledger Value A150

# The sum of original cost and additions & betterments

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

### Range of Values for A150

Minimum	Maximum
0	9999999

# Validation Rule for A150

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

#### Total A&B A003

System generated sum of all reported amounts in A&B Amount (A317), in US

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A003

Minimum	Maximum
0	99999999

#### NOTES:

- For railroad-marked cars, report the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not be used to report Ledger Value.
- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.
  - o Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
  - o Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.
- For connected unit cars report the total Truck Location A for all units in the

# General Status Code Mandatory USCD Identifies the current operational state

Does not Carry Forward.

# **Permissible Values for USCD**

A ACTIVE I INACTIVE

P PRE-REGISTERED

#### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-Registered.
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID	0001
The equipment stenciled number	

#### Validation Rule for 0001

- -Equipment Number must not be larger than 6 digits (i.e., 999999) **NOTES:**
- Equipment ID includes the mark and number stenciled on the equipment.
   Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD99999).
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

Mechanical Designation Mandatory	UMMD
Equipment description without physical dimensions	• 🛦

Used in ETC Generation. Used for Transportation Codes.

# Permissible Values for UMMD

PA Passenger - Passenger Service

PAB Passenger - Passenger and Baggage Service

PB Passenger - Baggage Service only

PD Passenger - Dining car

PS Passenger - Company Service car

PSD Passenger - Company Service car with Dining

Equipment Type Code	UMET
An alpha numeric code that describes the physical attributes of equip	oment

System Generated Field. This element is not eligible for Input.

#### NOTES:

• Please Refer to Appendix I for More information Regarding ETC Generation

Maint of Way Service Type	B403

# Identifies equipment Maintenance Of Way function

Value does not carry forward for Equipment Group Change.

# Permissible Values for B403

C2 Crane / Boom Support Car

F4 Flat-Wheel Sets

T4 Training Car

T8 Track Geometry Car

Built Date Mandatory	BLDT
The date the construction of the equipment is complete	•

Data is Confidential. Used for Transportation Codes. Value does not carry forward for Single Clone / Multi-Clone.

# Range of Values for BLDT

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for BLDT

-Built Date must not be in the future for equipment in Active Status

 -Prior and target equipment's Built Date (BLDT) must match for restencling

#### NOTES:

- Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

# Rebuilt / ILS Date RBDT The date the re-construction of the equipment is complete

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Range of Values for RBDT

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for RBDT

-Rebuilt/Increased Life Service Date must be after the Built Date (BLDT)

-Rebuilt Date must not be more than 70 years after the Built Date (BLDT)

#### NOTES:

- Railroad cars -- applicable only to cars meeting status as provided in both STB Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt Date unless car has been approved by the AAR.

Rebuilt Flag	RBFL
Identifies the equipment is nearing its end of life cycle	

Data is Confidential. System Generated Field. This element is not eligible for Input.

# Permissible Values for RBFL

N No Y Ye

# Owner Mandatory Primary reporting mark of the railroad or private company owning the car

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

### NOTES:

 Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.

Equipment Group Mandatory	0002
Identifies the various major car types	•

Used for Transportation Codes. Affects Rating.

Lessee LESE

The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

# Validation Rule for LESE

-Umler Owner (UMOW) and Lessee are not allowed to be equal

#### NOTES

 In order to assign privately marked cars to a pool, a railroad reporting mark must be reported.

Maintenance Party MNPT

The parent reporting mark of the company responsible for the maintenance and repairs of the equipment

Does not Carry Forward.

●=Mandatory ▲=Used in ETC Generation = Affects Rating - 233 - \*=Conditionally Mandatory June 2025

#### B201 **Mark Owner Category**

# The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

#### Permissible Values for B201

- **US Private** В
- Canadian Private C
- Foreign Private
- Н Canadian Class II
- Canadian Class I
- J Mexican Class I
- Κ Canadian Class III
- Μ Mexican Private
- Ν **US Private Steamship**
- 0 Canadian Private Steamship
- Ρ Mexican Private Steamship
- Q Foreign Private Steamship
- R US Class II Railroad
- US Class I Railroad U
- ٧ US Class III Railroad
- W Mexican Class II Railroad
- Mexican Class III Railroad

#### NOTES:

• This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry.

**PRID Prior Equipment ID** 

#### The previous reporting mark and number of the equipment

Value does not carry forward for Single Clone / Multi-Clone.

# Validation Rule for PRID

- -Prior and target equipment's Built Date (BLDT) must match
- -The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

#### NOTES:

• Prior ID enables equipment records to share the same historical lineage. Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

**Last Update Date B122** 

# Date of the last Umler element change

System Generated Field. This element is not eligible for Input.

**Equipment Add Date** B082

# Date the reporting mark and number was added to the Umler system

System Generated Field. This element is not eligible for Input.

**Status Change Reason USCR** 

# Identifies the reason for the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for USCR

- Initial Load
- М Movement
- Status Changed Manually 0

# NOTES:

- If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

**Status Change Date USCT** 

# Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

**Equipment Identification** 

EINN

Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

# NOTES:

Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections.

**Info Conflict Status** 

B355

Indicates that an Informational Conflict exists on the Equipment record

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

**Conflict Status** 

R050

Identifies the escalation level of equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B050

- Subject to Zero-Rating
- Subject to Restricted in Interchange 2
- Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Date of Original Conflict** 

B063

The date the equipment was originally placed in the current conflict

System Generated Field. This element is not eligible for Input.

**Next Conflict Status** 

B135

Identifies the next escalation level of an equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

# Permissible Values for B135

- 1 Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Notice Indicator** 

**B137** 

Identifies equipment in error in Umler Notice Management

System Generated Field. This element is not eligible for Input.

**Conflict Status Next Date** 

**B062** 

The date the conflict status will be escalated

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**Rate Indicator** 

A070

Indicates the rate type applicable to the unit

System Generated Field. Used for Transportation Codes. Affects Rating. This

=Mandatory ▲=Used in ETC Generation = Affects Rating

**- 234 -**

\*=Conditionally Mandatory

element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for A070

- O Zero-Rated Due to Conflict Errors
- Zero-Rated Scrap (S ,SX), AAR Overage (XA), FRA Overage (YA), Umler Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].

#### NOTES:

• If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.

First Movement Date	USAT
The first movement date under the stenciled mark of the equipment	

This element is not eligible for Input. Does not Carry Forward.

Equipment Add Company	B083
The reporting mark of the company that added the equipment	

System Generated Field. This element is not eligible for Input.

Registration Reason	B174
The code indicating the reason this equipment is added	

Does not Carry Forward.

# Permissible Values for B174

Add-Back N New Ρ Pending Restencil R Restencil

Restencil Program Ind	B177
Identifies the equipment is under a restencil program	

#### Permissible Values for B177

Delete Reason Code	B064
A code that designates the reason the equipment has been deleted	

Value does not carry forward for Add Back.

#### Permissible Values for B064

- Restenciled Α
- D Destroyed or wrecked
- ı Lease terminated, removed from fleet
- Ρ Retired unserviceable beyond economic repair
- R Rebuilt
- S Sold Serviceable
- W Over age retired for dismantling
- Υ Error, reporting did not exist
- Ζ Other

# **Non-Compliant Wheelsets**

B544

Equipment record is incomplete and has a missing wheelset component ID association. Refer to AAR Field Manual Rule 44 for industry requirements \*

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for B544

- -A Wheelset Component ID is required for each applicable location on equipment built on or after January 1, 2016
- -A Wheelset Component ID is required for each applicable location on equipment rebuilt on or after January 1, 2016 and Gross Rail Load (A266) is greater than 268,000 lbs

# NOTES:

- A "Y" will be system generated if the equipment is active and the number of Wheelset CID's required is not equal to the Axle Count (A024) on the
- Validation rule applies to equipment that has been in Active status for 60 days

# Weight

Gross Rail Load/Weight Mandatory

A266

The maximum permissible weight on rail of the equipment and the load, reported in pounds

#### Range of Values for A266

Minimum	Maximum
42500	495000

#### Validation Rule for A266

-Gross Rail Load must be equal to the Load Limit (LDLT) plus the Tare Weight (A259)

Use Table 1 below to determine Gross Rail Load

TABLE 1 -		
Journal Size	Load per Axle	Gross Rail Load for 4-
		axle Equipment
B - 4 1/2" x 8"	25,750 lbs.	103,000 lbs.
C - 5" x 9"	35,500 lbs.	142,000 lbs.
D - 5 1/2" x 10"	44,250 lbs.	177,000 lbs.
E - 6" x 11"	55,000 lbs.	220,000 lbs.
F - 6 1/2" x 12"	65,750 lbs.	263,000 lbs.
G - 7" x 12"	78,750 lbs.	315,000 lbs.
K - 6 1/2" x 9"	71,500 lbs.	263,000 lbs.
M - 7" x 9"	78,750 lbs.	315,000 lbs.

#### NOTES:

- For multi-unit equipment, report the total gross rail load for the entire set.
- Refer to Field Manual Rule 70 if additional information is required.

A Gross Rail Load less than the listed or calculated values may be entered; however:

- 1. Star Code (A247) must be R or S. and
- 2. Load Limit (LDLT) must also be reduced, ensuring Tare Weight (A259) plus Load Limit (LDLT) equals the reported Gross Rail Load.

For equipment having two or more different journal sizes, see following examples:

Example for Drawbar Connected:

- A 3-unit drawbar connected car has 12 axles.
- The end units (Locations A and B) each have 4 axles with E 6" x 11" journals.
- The intermediate unit (Locations C) has 4 axles with F 6 1/2" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

```
8 ea. E-6" x 11" journal axles X 55,000 lbs. per axle =
                                                            440,000 lbs.
+ 4 ea. F-6 1/2" x 12" journal axles X 65,750 lbs. per axle = 263,000 lbs.
                                          Gross Rail Load = 703,000 lbs.
```

Example for Articulated Connected:

- A 5-unit articulated intermodal car has 6 trucks (12 axles).
- The end trucks (Locations A and B) each have 2 axles with E 6" x 11"
- The intermediate trucks (Locations C, D, E, and F) each have 2 axles with G - 7" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

```
4 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 220,000 lbs.
+ 8 ea. G-7" x 12" journal axles X 78,750 lbs. per axle = 630,000 lbs.
                                       Gross Rail Load = 850,000 lbs.
```

=Mandatory

= Affects Rating

**- 235 -**

\*=Conditionally Mandatory

# Tare Weight Mandatory

A259

The equipment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

# Range of Values for A259

Minimum	Maximum
16000	320000

#### NOTES:

- · Do not report an average Tare Weight for car series, except for Pre-Registered cars
- When cars are made active, the actual Tare Weight must be recorded

#### Load Limit Mandatory

LDLT

The maximum permissible weight of the commodity that can be loaded into the equipment, reported in pounds

#### Range of Values for LDLT

Minimum	Maximum
2500	145000

Star Code

Indicates a reduction of the Load Limit (LDLT) of the equipment per AAR Rule 70

# Permissible Values for A247

- R **Body Capacity less than Truck Capacity**
- Reduced Load Limit S

# Dimension

**Plate Code** A046

Indicates the extreme height and width clearance of the equipment

# Permissible Values for A046

- В Plate Code B
- С Plate Code C
- Plate Code E Ε
- Plate Code F F
- G Clearance Code G
- Ν Plate Code N

# NOTES:

- For a description of Plate Codes, please see Appendix J at the back of this
  - o Report B: If clearance does not exceed Plate B
  - o Report C: If clearance is greater than Plate B. but does not exceed Plate C
  - o Report E: If clearance is greater than Plates B and C, but does not exceed Plate E.
  - o Report F: If clearance is greater than Plates B, C and E, but does not exceed Plate F
  - o Report G: If clearance exceeds Plates B, C, E, F, and N.
  - o Report N: If clearance is greater than Plates B, C, E, and F, but does not exceed Plate N.
- There is no AAR Plate G. Clearance Code G is included in Umler to represent equipment that does not fit any existing AAR clearance plates.
- For ARTICULATED/MULTI-UNIT SET report the most restrictive clearance plate of UNIT in the set.

# **Outside Length Mandatory**

**OSLG** 

The outside length over pulling faces of couplers in normal position

Displayed in feet and inches on the Web. Stored in inches.

# Range of Values for OSLG

Minimum	Maximum
20 ft 0 inches	133 ft 0 inches

# NOTES:

- For connected unit cars report the maximum coupled length of the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

# **Outside Extreme Width Mandatory**

A186

The outside extreme width of the equipment

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A186

Minimum	Maximum
7 ft 0 inches	11 ft 10 inches

#### Validation Rule for A186

- -Outside Extreme Width must not exceed 10 feet 8 inches for Plate Codes B, C, E, F, or N
- -Outside Extreme Width (A186) for Plate Code A must not be less than 10 feet 8 inches.
- -Outside Extreme Width (A186) for Plate Code A must not exceed 10 feet 10 inches.

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

**Outside Extreme Height** A185 Height from top of rail to extreme projecting height

Displayed in feet and inches on the Web. Stored in inches.

Range of Values for A185 Minimum Maximum 2 ft 0 inches 22 ft 0 inches

#### Validation Rule for A185

- -Outside Extreme Height for Plate Codes A, B, or H must be less than or equal to 15 feet 1 inch
- -Outside Extreme Height for Plate Codes C or I must be less than or equal to 15 feet 6 inches
- -Outside Extreme Height for Plate Code E must be less than or equal to 15 feet 9 inches
- -Outside Extreme Height for Plate Code F must be less than or equal to 17 feet 0 inch
- -Outside Extreme Height for Plate Code N must be less than or equal to 17

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

# **Outside Height Extr Width**

A187

The highest point at which the extreme width of the equipment occurs

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A187

Minimum	Maximum		
1 ft 0 inches	22 ft 0 inches		

# Validation Rule for A187

- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 8 inches if Outside Height Extreme Width is 13 feet 10 inches or less
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 7 inches if Outside Height Extreme Width is 13 feet 11 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 0 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 4 inches if Outside Height Extreme Width is 14 feet 1 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 2 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 3 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 4 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 9 inches if Outside Height Extreme Width is 14 feet 5 inches

# Umler®

# **Data Specification Manual**

- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 5 inches if Outside Height Extreme Width is 14 feet 6 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 9 feet 2 inches if Outside Height Extreme Width is 14 feet 7 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 10 inches if Outside Height Extreme Width is 14 feet 8 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 6 inches if Outside Height Extreme Width is 14 feet 9 inches
- Outside Extreme Width (A186) for Plate Codes B must not exceed 8 feet 3 inches if Outside Height Extreme Width is 14 feet 10 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 11 inches if Outside Height Extreme Width is 14 feet 11 inches
- Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 6 inches if Outside Height Extreme Width is 15 feet 0 inches
- -Outside Extreme Width (A186) for Plate Codes B must not exceed 7 feet 4 inches if Outside Height Extreme Width is 15 feet 1 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 8 inches if Outside Height Extreme Width is 14 feet 3 inches or less
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 7 inches if Outside Height Extreme Width is 14 feet 4 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 6 inches if Outside Height Extreme Width is 14 feet 5 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 4 inches if Outside Height Extreme Width is 14 feet 6 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 3 inches if Outside Height Extreme Width is 14 feet 7 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 10 feet 2 inches if Outside Height Extreme Width is 14 feet 8 inches
- -Outside Extreme Width (A 186) for Plate Codes C must not exceed 10 feet 0 inches if Outside Height Extreme Width is 14 feet 9 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 9 feet 9 inches if Outside Height Extreme Width is 14 feet 10 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 9 feet 5 inches if Outside Height Extreme Width is 14 feet 11 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 9 feet 2 inches if Outside Height Extreme Width is 15 feet 0 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 8 feet 10 inches if Outside Height Extreme Width is 15 feet 1 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 8 feet 6 inches if Outside Height Extreme Width is 15 feet 2 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 8 feet 3 inches if Outside Height Extreme Width is 15 feet 3 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 11 inches if Outside Height Extreme Width is 15 feet 4 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 8 inches if Outside Height Extreme Width is 15 feet 5 inches
- -Outside Extreme Width (A186) for Plate Codes C must not exceed 7 feet 4 inches if Outside Height Extreme Width is 15 feet 6 inches
- Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 8 inches if Outside Height Extreme Width is 15 feet 2 inches or less
- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 6 inches if Outside Height Extreme Width is 15 feet 3 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 10 feet 3 inches if Outside Height Extreme Width is 15 feet 4 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 9 feet 6 inches if Outside Height Extreme Width is 15 feet 5 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 8 feet 8 inches if Outside Height Extreme Width is 15 feet 6 inches
- Outside Extreme Width (A186) for Plate Code E must not exceed 7 feet 11 inches if Outside Height Extreme Width is 15 feet 7 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 7 feet 1 inches if Outside Height Extreme Width is 15 feet 8 inches
- -Outside Extreme Width (A186) for Plate Code E must not exceed 6 feet 3 inches if Outside Height Extreme Width is 15 feet 9 inches
- Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 8 inches if Outside Height Extreme Width is 16 feet 3 inches or less

- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 7 inches if Outside Height Extreme Width is between 16 feet 4 inches and 16 feet 6 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 6 inches if Outside Height Extreme Width is 16 feet 7 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 3 inches if Outside Height Extreme Width is 16 feet 8 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 10 feet 0 inches if Outside Height Extreme Width is 16 feet 9 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 8 inches if Outside Height Extreme Width is 16 feet 10 inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 5 inches if Outside Height Extreme Width is 16 feet 11inches
- -Outside Extreme Width (A186) for Plate Code F must not exceed 9 feet 2 inches if Outside Height Extreme Width is 17 feet 0 inches
- Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 8 inches if Outside Height Extreme Width (A187) is 16 feet 9 inches or less
- -Outside Extreme Width (A186) for Plate Code N must not exceed 10 feet 6 inches if Outside Height Extreme Width (A187) is 16 feet 10 inches

- -Outside Upper Eaves Width for Plate Code N must not exceed 10 feet 2 inches if Outside Upper Eaves Height (A193) is 17 feet 0 inches
- -Outside Upper Eaves Width for Plate Code N must not exceed 9 feet 11 inches if Outside Upper Eaves Height (A193) is 17 feet 1 inch

# NOTES:

• For connected unit cars report the dimension of the largest unit in the set

Outside	ш	nn	er	Fav	IPS.	Høht
Outside	•	νv	CI	Lav	-	HIGHL

A193

Height from the top of rail to the uppermost outside corner of the equipment

Displayed in feet and inches on the Web. Stored in inches.

# Range of Values for A193

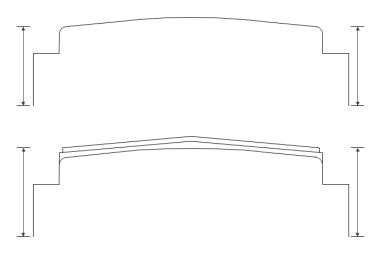

Minimum	Maximum
2 ft 0 inches	20 ft 0 inches

#### Validation Rule for A193

- Outside Upper Eaves Height must not exceed the Outside Extreme Height
   Outside Upper Eaves Height must be greater than or equal to the Outside Lower Eaves Height (A189)
- -Outside Upper Eaves Height for Plate Codes A, B, or H must not exceed 15 feet 1 inch
- -Outside Upper Eaves Height for Plate Codes C or I must not exceed 15 feet 6 inches
- -Outside Upper Eaves Height for Plate Code E must not exceed 15 feet 9 inches
- -Outside Upper Eaves Height for Plate Code F must not exceed 17 feet 0 inches
- -Outside Upper Eaves Height for Plate Code N must not exceed 17 feet 1 inch

#### NOTES:

• For connected unit cars report the dimension of the largest unit in the set.

Outside Lower Eaves Width	A190
Width over lower eaves at sides of car (see diagram)	

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A190

Minimum	Maximum
7 ft 0 inches	10 ft 10 inches

#### Validation Rule for A190

- -Outside Lower Eaves Width must not exceed the Outside Extreme Width (A186)
- -Outside Lower Eaves Width for Plate Code A must not exceed 10 feet 10 inches
- -Outside Lower Eaves Width for Plate Codes B, C, E, F, H, or I must not exceed 10 feet 8 inches
- Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 8 inches if Outside Lower Eaves Height (A189) is 16 feet 9 inches or less
- -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 6 inches if Outside Lower Eaves Height (A189) is 16 feet 10 inches
- -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 4 inches if Outside Lower Eaves Height (A189) is 16 feet 11 inches
- -Outside Lower Eaves Width for Plate Code N must not exceed 10 feet 2 inches if Outside Lower Eaves Height (A189) is 17 feet 0 inches
- -Outside Lower Eaves Width for Plate Code N must not exceed 9 feet 11 inches if Outside Lower Eaves Height (A189) is 17 feet 1 inch

#### NOTES:

- Round fraction to the higher inch, e.g., 05 1/4" = 06"
- For connected unit cars report the dimension of the largest unit in the set.

# Outside Lower Eaves Hght A189 Height from top of rail to lower eaves at side of car (see diagrams)

Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A189

Mange of Values for A105			
Minimum	Maximum		
8 ft 0 inches	20 ft 0 inches		

# Validation Rule for A189

- -Outside Lower Eaves Height must not exceed the Outside Extreme Height (A185)
- -Outside Lower Eaves Height for Plate Codes A, B or H must not exceed 15 feet 1 inch
- Outside Lower Eaves Height for Plate Codes C or I must not exceed 15 feet 6 inches
- -Outside Lower Eaves Height for Plate Code E must not exceed 15 feet 9 inches
- -Outside Lower Eaves Height for Plate Code F must not exceed 17 feet 0
- Outside Lower Eaves Height for Plate Code N must not exceed 17 feet 1 inch

#### NOTES:

- Round fraction to the higher inch, e.g., 05 1/4" = 06"
- For connected unit cars report the dimension of the largest unit in the set.

**Truck Center Length** A276 The length between the centers of the two truck systems

Displayed in feet and inches on the Web. Stored in inches.

# Range of Values for A276

Minimum	Maximum		
15 ft 0 inches	76 ft 11 inches		

#### Validation Rule for A276

- -Truck Center Length is required for cars with an Outside Length of greater than 62 feet 6 inches
- -Truck Center Length must be a minimum of 15 feet for cars with an Outside Length greater than 62 feet 6 inches

#### NOTES:

• For connected unit cars report the dimension of the largest unit in the set.

# Specification

**Truck Count B256** The total number of trucks on the equipment

System Generated Field. This element is not eligible for Input.

#### Range of Values for B256

Minimum	Maximum
2	4

Axle Count Mandatory A024 The total number of axles on the equipment

Range o	f Va	lues I	for	A024
N 411				

Minimum	Maximum
2	40

# Validation Rule for A024

- -Axle Count must be greater than or equal to 4
- -Axle Count for an articulated car must be greater than or equal to ((Connected Unit Count (A020) x 2) + 2)
- -Axle Count for a draw bar connected car must be greater than or equal to (Connected Unit Count (A020) x 4)
- -Total Axle Count must match sum of truck axle counts

Wheel Bearing Type Mandato
----------------------------

B191

Indicates the wheel bearing journal design for the equipment

# Affects Rating.

#### Permissible Values for B191

Plain R Roller

#### Validation Rule for B191

- -Cars with Plain Bearings will have a Transportation Code (TCOD) and Transportation Condition Code (TCCD) of either YA, S\_, SX, or XJ
- -Equipment cannot have Plain Bearings if Built Date (BLDT) is on or after January 1, 1993

**Brake Shoe Type Mandatory** Indicates the type of brake shoe on the equipment

# **B026**

# Permissible Values for B026

- C **Tread Conditioning**
- Н High Friction Composite
- L Low Friction Composite/Cast Iron
- **DISC PADS** Р
- Т DISC AND TREADS

# **CC Side Bearing Type**

A146

Indicates the travel range of the constant contact side bearings installed on the equipment

Permissible Values for A146

- LC Long Travel Constant Contact
- SC **Short Travel Constant Contact**

#### **Empty/Load Device Eqpd**

B075

Indicates that the air brake system includes a device to determine if the equipment is empty or loaded, and then varies the braking forces accordingly

#### Permissible Values for B075

Yes

**Body Material** 

A030

The material that composes the body of the equipment

#### Permissible Values for A030

- 01 Aluminum
- 04 Combination
- 09 Fiberglass Reinforced Composite
- 18 Stainless Steel
- 19 Standard Steel
- 30 Wood

#### **Remote Monitoring Device**

**B176** 

Indicates the equipment has a device that transmits a signal or records data

### Permissible Values for B176

Yes

#### NOTES:

Per AAR S-2045, This may be data related to ride quality, geographic location, temperature/condition of the load, load/empty status, etc.

#### **Connected Unit Count**

A020

Indicates the number of units within an articulated or multi-unit equipment

# Affects Rating.

#### Range of Values for A020

Minimum	Maximum
2	45

# Intermediate Conn Style

**B115** 

Indicates the method by which two or more pieces of equipment are connected

#### Permissible Values for B115

- Articulated Connector
- **Drawbar Connector**

# Validation Rule for B115

- -Intermediate Connector Style is required for multi-unit equipment
- -Intermediate Connector Style must not be reported for single unit equipment

# **Operating Brakes Mandatory**

A182

5

The number of air brake control valves on the equipment (excludes hand brakes). One control valve consists of a service portion, emergency portion, and pipe bracket. Example: DB-60 control valve

# Permissible Values for A182

1 2 6 7 8 9

#### Validation Rule for A182

- -Operating Brakes must be reported for all equipment
- -Operating Brakes (A182) must be 1 for non-articulated equipment with an Axle Count (A024) equal to 4

Excludes empty/load device, number 8 vent valve, and proportion valve.

# **ECP Brake Type**

Indicates the type of electronic controlled pneumatic brake used on the equipment

#### Permissible Values for B327

- Ν Not Equipped
- 0 Overlay - Both ECP & Air Brake
- S Stand Alone - ECP Only

#### **ECP Brake Builder**

B328

**B327** 

The manufacturer of the electronic controlled pneumatic brake used on the equipment

# Permissible Values for B328

NYAB New York Air Brake

WABT WARTEC

# **Brake Cylinder Mount Type**

**B540** 

# Identifies the location of the brake cylinder

# Permissible Values for B540

В **Body Mounted** 

Truck Mounted

#### Validation Rule for B540

- Brake Cylinder Mount Type is mandatory for all equipment built or rebuilt on or after January 1, 2016

#### Air Brake Model Number **ARMD**

# Air Brake Model

# Permissible Values for ABMD

**EMD** ElectroMotive Diesel NIPP Nippon-Sharyo National Steel Car NSC

**PCM** Pullman Car & Manufacturing

PS Pullman-Standard SLC Saint Louis Car Company

TIGA Talgo America UNKN Unknown

#### Validation Rule for A035

- -Equipment built or rebuilt on or after July 1, 2010 cannot have a Equipment Builder of Unknown
- -Equipment with a Built Date (BLDT) on or after July 1, 2010 cannot have an Equipment Builder Code of OWNER RAILROAD.
- -Equipment Builder can have a value of MULT only if the equipment has multiple units.

# **Builder Lot Code**

B030

A unique identifier for a group of equipment built by one manufacturer under the same contract

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for B030

-Equipment built or rebuilt on or after June 28, 2012 must have a value for **Builder Lot Code** 

#### **Built Country**

B031

The country where the equipment was constructed

Data is Confidential.

#### Permissible Values for B031

CA Canada MX Mexico

US United States

#### **Rebuilt Country**

B170

The country where the equipment was re-constructed

#### Permissible Values for B170

CA Canada MX Mexico

US United States

#### **FRA Reflectorization**

B096

Indicates the equipment owner assumes responsibility for applying reflectorization tape

#### Permissible Values for B096

Reflectorization Plan

W Reflectorization Waiver

# Air Hose Arrangement

**B524** 

The type of trainline air hose arrangement

# Permissible Values for B524

- S-424 Angle Cock Location
- В S-425 Angle Cock Location on Cars Equipped with AAR Type F Coupler
- C S-426 Angle Cock Location on Cars with Floating Sills
- D S-427 Angle Cock and Air Brake Hose Location on Cars with Excessive Overhang Preventing Compliance with AAR Standards
- Ε S-428 Angle Cock Location on Cars Equipped with AAR Type F Coupler and Cushioned Underframe
- F S-4003 (Former Standard)
- G S-4003x (Former Standard Retrofitted to Meet All Dimensions Except Height)
- Н S-4003-05 (Current Standard Train Line Arrangement for Cars with F-Shank Couplers)
- S-4021 Angle Cock and Brake Hose Location on Cars with EOCC (E and
- S-4021 Coupler Mounted Bracket End Arrangement
- Κ S-4028 Train Line Arrangement with Displaceable Union on Cars with EOCC and Couplers Not Exceeding 45 in. in Length
- L S-4029 Train Line Arrangement with Displaceable Union on Cars with EOCC and Couplers Exceeding 45 in. in Length
- S-4030 Trolley Arrangement on Cars with EOCC and E-Shank Couplers

### Validation Rule for B524

-Air Hose Arrangement must be reported for this equipment if it is Built or Rebuilt on or after April 22, 2014.

- If any of the following conditions apply, Air Hose Arrangement (B524) must be reported for cars Built or Rebuilt on or after April 22, 2014:
  - Draft Gear Type (B073) at any location is C or E.
  - Connected Unit Count (A020) is reported.
  - Outside Length (OSLG) is greater than or equal to 70 feet (840 inches).
  - The overhang is greater than 5 feet 6 inches (66 inches). Overhang is calculated as follows:
  - 0.5 \* (Outside Length, in inches, minus Truck Center Length, in inches, minus 31 inches)

▲=Used in ETC Generation

For all other equipment, reporting Air Hose Arrangement is optional.

4-Pressure ABT Receiver Eqpd

Identifies if the equipment is equipped with a 4-pressure air brake test receiver

Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for B539

- Equipped Ε
- Not Equipped Ν

#### NOTES:

• An "E" will be system generated if a 4-Pressure ABT is reported on the equipment.

**Original Cost** A184 The original manufacturer selling price

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

### Range of Values for A184

Minimum	Maximum	
0	9999999	

# Validation Rule for A184

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported.
- -Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost
- -Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

# NOTES:

- Original Cost is never altered. It is the cost of the equipment to the original owner.
- For railroad-marked cars, report in US dollars the original ledger value of the original owner For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24
- The original cost is used in the settlement of AAR Interchange Rule 107 Office Manual.
- For connected unit cars report the total original cost for all units in the set.
- Numeric, applicable to all railroad-marked cars Also, applicable to privately marked covered hopper (LO) cars.
- Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

Ledger Value	A150
The same of entrined each and additions Q hatterneous	

# The sum of original cost and additions & betterments

Data is Confidential. Value does not carry forward for Single Clone / Multi-

# Range of Values for A150

Minimum	Maximum
0	9999999

# Validation Rule for A150

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

Total A&B A003

System generated sum of all reported amounts in A&B Amount (A317), in US

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A003

Minimum	Maximum
0	99999999

#### NOTES:

- For railroad-marked cars, report the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not be used to report Ledger Value.
- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.
  - o Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
  - o Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.
- For connected unit cars report the total Truck Location A for all units in the

# Ind for Pos/Neg Total A&B

# Validation Rule for A316

- -When entering an individual Addition & Betterment, you must enter a value in
- -The A&B Indicator is required when Additions & Betterments are reported.
- -The A&B Indicator must not be reported if Additions & Betterments are not reported.

#### **A&B Amount**

A317

The amount of the individual addition and betterment added to or subtracted from the original cost of the equipment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

### Range of Values for A317

Minimum	Maximum
1	999999

### Validation Rule for A317

-When entering an individual addition & betterment; A&B Date Done (A319), A&B Type (A318), A&B Pos/Neg Ind (A316), and A&B Amount (A317) must be reported

**A&B Date Done** 

Δ319

# The date of the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

### Range of Values for A319

Minimum	Maximum
1/1/1900	12/31/9999

# Validation Rule for A319

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -Addition and Betterment Date Done cannot be earlier than Built Date
- -Additions & Betterments Date Done cannot be later than today's date.

=Mandatory ▲=Used in ETC Generation = Affects Rating

# **Umler**

# **Data Specification Manual**

A&B Type A318

The type of individual addition and betterment as defined by Rule 107

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A318

**GNRL** General - Capitalized Additions and Betterments

Initial load of historical A&B amount as of Umler 4.6 implementation

date

#### Validation Rule for A318

INIT

-For each equipment, only one Individual A&B Type can have a value of

-When entering an individual Addition & Betterment, you must enter a value in all 4 fields.

# Car Management

**Pool Number** 

Unique number used to indicate the grouping of equipment for a particular purpose

Used for Transportation Codes. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add Back.

**TCUR User Routing Instructions** The routing instruction reported by the user

Used for Transportation Codes

#### **Permissible Values for TCUR**

- 2 Trailer Service Rule 2
- Contaminated commodity service G
- Μ Mark canceled
- 0 Owner requested return
- U Unassigned equipment

#### NOTES:

• For further explanation reference Appendix E.

**Umler Transportation Code** 

The type of assigned service, empty routing or restriction of the equipment System Generated Field. Used for Transportation Codes. This element is not

eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

Transportation Cond Code	TCCD
The AAR or FRA interchange restriction code	

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

**Mechanical Restriction TCME** User reported or system generated type of mechanical restriction

Used for Transportation Codes.

# **Permissible Values for TCME**

- S Scrap
- **AAR Interchange Restriction** Х
- **FRA Interchange Prohibited**

### NOTES:

For further explanation reference Appendix D.1

**TCMR** Mech Restriction Reason The explanation of the Mechanical Restriction (TCME)

Used for Transportation Codes.

# **Permissible Values for TCMR**

- Restricted Due to Age (Over 40-AAR, Over 50-FRA)
- В Restricted Due to Air Brakes

- С Restricted Due to Axles
- D Restricted Due to Couplers and Couplers Parts
- F **Restricted Due to Couplers Yokes**
- G Restricted Due to Draft Gears
- Restricted Due to Journal Bearing and Journal Lubrication
- Ν Restricted Due to Trucks
- Restricted Due to Truck Side Frames Р
- Т **Restricted Due to Trucks Bolsters**
- U Restricted by AAR or Owner
- W Restricted Due to Wheels
- Χ Restricted Due to Scrap or Early Warning
- Z Restricted Due to Umler Conflict (Not Valid for User Input)

#### NOTES:

- For further explanation reference Appendix D.2.
- The assignment of the Transportation Codes S , SX, XA, XZ and YA generate the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and mileage rate.

# **Train Service**

#### **Restricted Speed Empty**

Describes the maximum restricted speed the equipment can travel when empty

# Range of Values for B180

#### Validation Rule for A057

- -If Rotary Coupler Style is reported, then Coupler Code must be a rotary coupler.
- -If Coupler Code is a rotary coupler, then Coupler Style must be R (Rotary).
- -Coupler Code of Type E Obsolete (Rule 16) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type E/F Obsolete (Rule 17) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of Type F Obsolete (Rule 18) can only be reported if the car was built or rebuilt before July 31, 2015
- -Coupler Code of FROTARY or EFROTARY cannot be reported for cars Built or Rebuilt on or after August 12, 2014.

#### NOTES:

- Obsolete: All Type D couplers are obsolete and should report code DOBS; cars with this coupler code will be restricted in interchange as discussed
- Unknown: If the coupler code is unknown or if the code stamped on the coupler is illegible, the code BUNK FUNK, EFUNK, or LOCOUNK should be reported.
- Special: Codes ESPEC, FSPEC, and EFSPEC have been created to decline coupler bodies that have been manufactured specifically for the equipment owner and are not listed in the attached table.
- The codes FROTARY and EFROTARY cannot be reported for equipment Built or Rebuilt since August 12, 2014.

**Coupler Style** B058 Describes the basic coupler design of the equipment

# Permissible Values for B058

В **Bottom Shelf** D **Double Shelf** 1 Drawbar Rotary M Drawbar Plain R Rotary

# **Validation Rule for B058**

- -If Draft System Type (B073) is H (Hydraulic) then Coupler Style (B058) cannot be reported as M (Solid Drawbar) or L (Rotary Drawbar)
- -If Draft System Type (B073) is not Center Of Car or End Of Car, Inches of Travel (B061) cannot be reported
- -If Draft System Type (B073) of Center Of Car or End Of Car is reported then Inches of Travel (B061) must also be reported

-If Draft System Type (B073) is E then Coupler Style (B058) cannot be reported as L or R

Inches of Travel	B061
The number of inches a draft system will travel	_

# Affects Rating.

#### Validation Rule(s) for B562

- -Draft Gear Group/Cushion Unit Pocket (B562) is mandatory for equipment built on or after June 13, 2019, unless Draft System Type (B073) is reported as X or Y
- -If Draft Gear Group/Cushion Unit Pocket (B562) is not equal to A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z, then Cushion Unit Type (B563) must be populated
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-6, EOC-7, EOC-7B, EOC-8B, EOC-8B, EOC-9, EOC-9B, EOC-9D, EOC-10, EOC-10B, EOC-10D, EOC-14, EOC-14B, EOC-18D, EOC-23B, EOC-24B, EOC-25E, EOC-26B, or EOC-27D then the Cushion Unit Type (B563) must be 1
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-9E, EOC-26F, or EOC-27E, then the Cushion Unit Type (B563) must be 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-11, EOC-12, EOC-13, EOC-13B, EOC-15, EOC-15B, EOC-15D, EOC-17, EOC-17B, EOC-17D, EOC-18, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-24B, COC-3, COC-5, or COC-7 then the Cushion Unit Type (B563) must be 1 or 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-8F or EOC-10F then the Cushion Unit Type (B563) must be 2 or 3
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-5, EOC-5B, EOC-5D, EOC-6, EOC-6B, EOC-6D EOC-11B, EOC-11D, EOC-12B, EOC-12D, or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3
  -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B,
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-16D, or COC-1 then the Cushion Unit Type (B563) must be 1, 2, or 4 -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D,
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D, EOC-3, EOC-3B, EOC-4, EOC-4B, or COC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, or 4
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1, EOC-1B, EOC-1D, or EOC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or S
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-8 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or 5
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1D, EOC-2,EOC-2D, EOC-3B, EOC-3B, EOC-5B, EOC-5D, EOC-5B, EOC-6D, EOC-7, EOC-7B, EOC-9B, EOC-9B, EOC-9D, EOC-9E, EOC-10D, EOC-11, EOC-11B, EOC-11D, EOC-12D, EOC-14B, EOC-15B, EOC-15D, EOC-15B, EOC-16D, EOC-17D, EOC-23, EOC-23B, EOC-27D, or EOC-27E then the Inches of Travel (B061) must be 10
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-19, EOC-19B, EOC-22, EOC-22B, or EOC-25E then the inches of travel must be 12
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-20 or EOC-20B then the Inches of Travel (B061) must be 14
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1B, EOC-4, EOC-4B, EOC-6B, EOC-8B, EOC-8B, EOC-8F, EOC-10, EOC-10B, EOC-10F, EOC-12B, EOC-13B, EOC-13B, EOC-17B, EOC-18B, EOC-18B, EOC-21, EOC-21B, EOC-24A, or EOC-24B then the Inches of Travel (B061) must be 15
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-2, COC-3, COC-4, COC-5, COC-6, or COC-8 then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 1 or 2, then the Inches of Travel (B061) must be 20
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 4, then the Inches of Travel (B061) must be 18
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 2, then the Inches of Travel (B061) must be 20
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 1, then the Inches of Travel (B061) must be 30
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1 then the Inches of Travel (B061) must be 10, 12, or 15
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-26, then the Inches of Travel (B061) must be 18

#### Validation Rule(s) for B563

- Cushion Unit Type (B563) is mandatory for equipment built on or after June 13, 2019.
- -If Draft Gear Group/Cushion Unit Pocket (B562) is not equal to A, B, C, D, E, F, G, H, J, K, L, M, N, P, Q, R, S, or Z, then Cushion Unit Type (B563) must be populated.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-6, EOC-7, EOC-7B, EOC-8, EOC-8B, EOC-9, EOC-9B, EOC-9D, EOC-10, EOC-10B, EOC-10D, EOC-14, EOC-14B, EOC-18D, EOC-23B, EOC-24B, EOC-25E, or EOC-26B then the Cushion Unit Type (B563) must be 1.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-9E, EOC-26F, or EOC-27E, then the Cushion Unit Type (B563) must be 2
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-11, EOC-12, EOC-13, EOC-13B, EOC-15, EOC-15B, EOC-15D, EOC-17, EOC-17B, EOC-17D, EOC-18, EOC-18B, EOC-19, EOC-19B, EOC-20, EOC-20B, EOC-21, EOC-21B, EOC-22, EOC-22B, EOC-24B, COC-3, COC-5, or COC-7 then the Cushion Unit Type (B563) must be 1 or 2.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-8F or EOC-10F then the Cushion Unit Type (B563) must be 2 or 3.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-5, EOC-5B, EOC-5D, EOC-6, EOC-6B, EOC-6D EOC-11B, EOC-11D, EOC-12B, EOC-12D, or COC-4 then the Cushion Unit Type (B563) must be 1, 2, or 3.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-16, EOC-16B, EOC-16D, or COC-1 then the Cushion Unit Type (B563) must be 1, 2, or 4.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-2B, EOC-2D, EOC-3, EOC-3B, EOC-4, EOC-4B, or COC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, or 4.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is EOC-1, EOC-1B, EOC-1D, or EOC-2 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or S.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-8 then the Cushion Unit Type (B563) must be 1, 2, 3, 4, or 5.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 1 or 2, then the Inches of Travel (B061) must be 20.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-1, and Cushion Unit Type (B563) is 4, then the Inches of Travel (B061) must be 18.
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 2, then the Inches of Travel (B061) must be
- -When the Draft Gear Group/Cushion Unit Pocket (B562) is COC-7, and Cushion Unit Type (B563) is 1, then the Inches of Travel (B061) must be 30.

ACTIVE INACTIVE 1

Ρ PRE-REGISTERED

#### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-Registered.
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID	0001
The equipment stenciled number	

#### Validation Rule for 0001

- -Equipment Number must not be larger than 6 digits (i.e., 999999) NOTES:
- Equipment ID includes the mark and number stenciled on the equipment. Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD999999)
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

Mechanical Designation Mandatory **UMMD** Equipment description without physical dimensions 

Used in ETC Generation. Used for Transportation Codes.

# **Permissible Values for UMMD**

EOTD-Two-Way Sensing and Braking Unit (SBT) NF

# UMFT **Equipment Type Code** An alpha numeric code that describes the physical attributes of equipment

System Generated Field. This element is not eligible for Input.

# NOTES:

• Please Refer to Appendix I for More information Regarding ETC Generation

Built Date Mandatory	BLDT
The date the construction of the equipment is complete	•

Data is Confidential. Used for Transportation Codes. Value does not carry forward for Single Clone / Multi-Clone.

# Range of Values for BLDT

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for BLDT

-Prior and target equipment's Built Date (BLDT) must match for restenciling

# NOTES:

- Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

Rebuilt / ILS Date	RBDT
The date the re-construction of the equipment is complete	

Data is Confidential. Value does not carry forward for Single Clone/Multi-Clone.

#### Range of Values for RBDT

Minimum	Maximum
1/1/1900	12/31/9999

#### NOTES:

• Railroad cars -- applicable only to cars meeting status as provided in both STB

- Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office Manual.
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt Date unless car has been approved by the AAR.

**Rebuilt Flag RBFL** Identifies the equipment is nearing its end of life cycle

Data is Confidential. System Generated Field. This element is not eligible for Input.

# **Permissible Values for RBFL**

No

**Owner Mandatory UMOW** Primary reporting mark of the railroad or private company owning the car

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

• Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.

Lessee **LESE** 

# The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### Validation Rule for LESE

-Umler Owner (UMOW) and Lessee are not allowed to be equal

• In order to assign privately marked cars to a pool, a railroad reporting mark must be reported.

Equipment Group Mandatory	0002
Identifies the various major car types	• -

Used for Transportation Codes. Affects Rating.

**Maintenance Party** The parent reporting mark of the company responsible for the maintenance and repairs of the equipment

Does not Carry Forward.

**B201 Mark Owner Category** The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change /Add Back.

#### Permissible Values for B201

- US Private В
- С Canadian Private
- Foreign Private
- Н Canadian Class II
- Canadian Class I
- Mexican Class I
- Κ Canadian Class III
- M Mexican Private

- US Class II Railroad R
- U US Class I Railroad
- US Class III Railroad

W Mexican Class II Railroad Y Mexican Class III Railroad

#### NOTES:

 This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry.

Prior Equipment ID PRID

The previous reporting mark and number of the equipment

Value does not carry forward for Single Clone / Multi-Clone.

#### **Validation Rule for PRID**

- -Prior and target equipment's Built Date (BLDT) must match
- -The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

#### NOTES:

Prior ID enables equipment records to share the same historical lineage.
 Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

Last Update Date B122
Date of the last Umler element change

System Generated Field. This element is not eligible for Input.

Equipment Add Date B082

Date the reporting mark and number was added to the Umler system

System Generated Field. This element is not eligible for Input.

Status Change Reason USCR Identifies the reason for the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

# Permissible Values for USCR

I Initial Load

M Movement

O Status Changed Manually

R Restencil

#### NOTES:

- If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

Status Change Date USCT

Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

Equipment Identification EINN
Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

#### NOTES:

 Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections.

Conflict Status B050

Identifies the escalation level of equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

# Permissible Values for B050

- 1 Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

# NOTES:

• Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs

- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

Date of Original Conflict

B063

The date the equipment was originally placed in the current conflict

System Generated Field. This element is not eligible for Input.

Next Conflict Status B135

Identifies the next escalation level of an equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B135

- 1 Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

Notice Indicator B137

Identifies equipment in error in Umler Notice Management System Generated Field. This element is not eligible for Input.

Conflict Status Next Date B062

The date the conflict status will be escalated

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

Rate Indicator A070

# Indicates the rate type applicable to the unit

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Does not Carry Forward.

# Permissible Values for A070

- 0 Zero-Rated Due to Conflict Errors
- 6 Zero-Rated Scrap (S\_,SX), AAR Overage (XA), FRA Overage (YA), Umler Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].

#### NOTES:

 If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.

First Movement Date USAT
The first movement date under the stenciled mark of the equipment

This element is not eligible for Input. Does not Carry Forward.

Equipment Add Company B083

The reporting mark of the company that added the equipment

System Generated Field. This element is not eligible for Input.

Registration Reason B174

The code indicating the reason this equipment is added

Does not Carry Forward.

#### Permissible Values for B174

A Add-Back N New P Pending Restencil R Restencil

Restencil Program Ind B177
Identifies the equipment is under a restencil program

Permissible Values for B177

●=Mandatory ▲=Used in ETC Generation = Affects Rating − **251** − **\***=Conditionally Mandatory June 2025

#### Yes

A234 Serial Number Manufacturer's Serial Number

# Range of Values for A234

mange or values for ALS+	
Minimum	Maximum
1000	999999

**Delete Reason Code** 

A code that designates the reason the equipment has been deleted

Value does not carry forward for Add Back.

#### Permissible Values for B064

- Α Restenciled
- D Destroyed or wrecked
- Lease terminated, removed from fleet 1
- Retired unserviceable beyond economic repair
- R Rebuilt
- S Sold Serviceable
- W Over age retired for dismantling
- Error, reporting did not exist Υ
- 7 Other

# Specification

# **Internal Data Logging**

B064

EOT Internal Data Logging can plug in a laptop and download multiple fields (ie: locomotive event recorder). The fields include: GPS lat/long, battery voltage, speed, brake pipe pressure, light on/off, emergency valve stat-New

#### Permissible Values for B080

Yes

**ECP Brake Equipped** 

**R347** 

Indicates whether an EOTD is equipped for ECP type brakes

Value does not carry forward for Equipment Group Change. Permissible Values for B347

**Equipment Builder** 

A035

# Identifies the original manufacturer of the equipment

# Permissible Values for A035

- 1 **QUANTUM** 2
  - GLENAYRE (DSL)
- 4 PULSE ELEC. INC.
- 5 WABTEC
- 7 U.S. & S
- 8 **NOT USED**
- 9 NORFOLK SOUTHERN RWY
- **BALDWIN-LIMA-HAMILTON** В
- DPS **DPS Electronics**
- **INVS Invensys Rail Corporation**
- **PRMK Progress Rail** SIEM Siemens UNKN Unknown

# Validation Rule for A035

- -Equipment Builder must be populated if the Built Date (BLDT) is July 1, 2010 or newer
- -Equipment built or rebuilt on or after July 1, 2010 cannot have a Equipment Builder of Unknown
- -Equipment with a Built Date (BLDT) on or after July 1, 2010 cannot have an Equipment Builder Code of OWNER RAILROAD.
- -Equipment Builder can have a value of MULT only if the equipment has multiple units.

**Builder Lot Code** 

**B030** 

A unique identifier for a group of equipment built by one manufacturer under the same contract

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Validation Rule for B030

-Equipment built or rebuilt on or after June 28, 2012 must have a value for **Builder Lot Code** 

**Built Country** 

B031

The country where the equipment was constructed

Data is Confidential.

# Permissible Values for B031

CA Canada MX Mexico

US **United States** 

**Battery Composition** 

**B556** 

Indicates the type of composition in the internal battery

#### Permissible Values for B556

- Α Lead Acid
- Р Lithium-Iron Phosphate

#### NOTES:

- This element is used to identify the battery composition within the EOTD main battery to support shipping and safety requirements.
- All EOTD internal batteries are non-spillable.
- Package shippers require lithium-ion batteries to contain less than 10kg of lithium. All EOTD batteries comply.

**GPS Equipped** 

**B557** 

Indicates the presence of a global positioning device through the following communication method.

# Permissible Values for B557

3G Cellular 3G 4G Cellular 4G

5G Cellular 5G NE Not Equipped SA Satellite

#### Validation Rule for B557

-GPS Equipped cannot be Cellular 3G if Built Date (BLDT) is on or after January 1, 2019

# NOTES:

- This element is used to identify whether the device contains cellular and GPS device capabilities. When new cellular technologies are deployed cellular companies plan for older technologies to expire.
- Cellular 2G expired on January 1, 2018, and 3G is planned to expire January 1, 2019.

**Radio Wattage** 

**B558** 

Indicates the device radio transmitter wattage

# Permissible Values for B558

- 2 2W
- 5W 5
- 8 8W

# NOTES:

• This element is to identify the radio wattage.

**Remote Disable** 

**B559** 

Indicates the device can be disabled remotely

Permissible Values for B559

N Not Equipped

\*=Conditionally Mandatory

Y Yes

#### NOTES:

 This element is used to identify whether the device is capable of being remotely disabled.

#### **Remote Asset Health Monitoring**

B560

A184

Indicates the equipment contains an asset health and status monitoring accessible remotely

## Permissible Values for B560

E Equipped N Not Equipped

#### Validation Rule for B560

- If Remote Asset Health Monitoring Equipment is Equipped then GPS Equipped (B557) cannot be Not Equipped.

#### NOTES:

 This element is used to identify whether the device is capable of remote asset health monitoring, e.g. battery level. Providing battery level enables EOTD Managers to prioritize finding low battery level devices higher than those that are not. Devices with deplenished battery power cannot send GPS pings.

Weight B561

Total weight of the EOT Device including the air hose in pounds

#### Range of Values for B561

Minimum 5 Maximum 45

#### NOTES:

- Supports improving shipping weights and understanding how much devices weigh for safety
- This element is used to identify the total weight of an EOT device including the air hose

## Cost

Original Cost

The original manufacturer selling price

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A184

Minimum	Maximum
	0000000

#### Validation Rule for A184

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported.
- -Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost
- -Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

#### NOTES:

- Original Cost is never altered. It is the cost of the equipment to the original owner
- For railroad-marked cars, report in US dollars the original ledger value of the original owner For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24
- The original cost is used in the settlement of AAR Interchange Rule 107 Office
   Manual
- For connected unit cars report the total original cost for all units in the set.
- Numeric, applicable to all railroad-marked cars Also, applicable to privately marked covered hopper (LO) cars.

• Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

Ledger Value A150

The sum of original cost and additions & betterments

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A150

Minimum	Maximum
0	9999999

#### Validation Rule for A150

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

Total A&B A003

System generated sum of all reported amounts in A&B Amount (A317), in US

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A003

Minimum	Maximum
0	99999999

#### NOTES:

- For railroad-marked cars, report the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not be used to report Ledger Value.
- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.
  - Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
- Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.
- For connected unit cars report the total Truck Location A for all units in the set

#### Ind for Pos/Neg Total A&B

A128

A code indicating the positive or negative adjustment to the original cost of the equipment

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A128

N Negative P Positive

#### A&B Pos/Neg Ind

A316

A code indicating the positive or negative adjustment to the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

## Permissible Values for A316

N Negative P Positive

#### Validation Rule for A316

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -The A&B Indicator is required when Additions & Betterments are reported.
- -The A&B Indicator must not be reported if Additions & Betterments are not reported.

A&B Amount A317

The amount of the individual addition and betterment added to or subtracted from the original cost of the equipment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

**TCME** 

**TCMR** 

## **Data Specification Manual**

Δ319

#### Range of Values for A317

Minimum	Maximum
1	999999

#### Validation Rule for A317

-When entering an individual addition & betterment; A&B Date Done (A319), A&B Type (A318), A&B Pos/Neg Ind (A316), and A&B Amount (A317) must be

**A&B Date Done** 

#### The date of the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A319

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for A319

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -Addition and Betterment Date Done cannot be earlier than Built Date (BLDT).
- -Additions & Betterments Date Done cannot be later than today's date.

A&B Type A318

The type of individual addition and betterment as defined by Rule 107

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

#### Permissible Values for A318

**GNRL General - Capitalized Additions and Betterments** 

INIT Initial load of historical A&B amount as of Umler 4.6 implementation

#### Validation Rule for A318

- -For each equipment, only one Individual A&B Type can have a value of INIT.
- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.

## Car Management

**Pool Number** 

Unique number used to indicate the grouping of equipment for a particular

Used for Transportation Codes. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add Back.

**User Routing Instructions** 

**TCUR** The routing instruction reported by the user

Used for Transportation Codes.

#### Permissible Values for TCUR

- 2 Trailer Service Rule 2
- G Contaminated commodity service
- M Mark canceled
- 0 Owner requested return
- U Unassigned equipment

#### NOTES:

• For further explanation reference Appendix E.

**Umler Transportation Code** 

The type of assigned service, empty routing or restriction of the equipment

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

**Transportation Cond Code TCCD**  The AAR or FRA interchange restriction code

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

· For further explanation reference Appendix E.

**Mechanical Restriction** 

User reported or system generated type of mechanical restriction

Used for Transportation Codes.

#### **Permissible Values for TCME**

- S Scrap
- Χ **AAR Interchange Restriction**

#### NOTES:

• For further explanation reference Appendix D.1

**Mech Restriction Reason** 

The explanation of the Mechanical Restriction (TCME)

Used for Transportation Codes.

#### Permissible Values for TCMR

- Restricted Due to Scrap or Early Warning Χ
- Ζ Restricted Due to Umler Conflict (Not Valid for User Input)

#### NOTES:

- For further explanation reference Appendix D.2.
- The assignment of the Transportation Codes S\_, SX, XA, XZ and YA generate the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and mileage rate.

## Miscellaneous

**Commercial Owner CIF** B049

The Customer Identification File (CIF) number for a commercial owner at a specific location

**Commercial Lessee CIF** 

R048

The Customer Identification File (CIF) number for a commercial lessee at a specific location

**Umler Effective Date** FEDT

The date the rating activity (pre-registration, modification, etc.) is expected to

This element is not eligible for Query. Does not Carry Forward.

#### Validation Rule for EFDT

-Effective Date cannot be set to more than 13 months in the future.

#### NOTES:

• Effective Date will default to the 1st of the following month that equipment is registered

## Inspection

**Inspection Date Done** 

The date the inspection was completed; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

## Validation Rule for DTDN

-The inspection date must not be 60 days before the Build Date

**Inspection Due Date** 

INDD

The due date of the next inspection; used for all inspection types reported on equipment

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**Inspection Performer** 

PFRF

The SCAC that completed the inspection; used for all inspection types reported

=Mandatory ▲=Used in ETC Generation

\*=Conditionally Mandatory

SPLC

## on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

Inspection Reporter REPT

The SCAC that reported the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

Location/SPLC

The SPLC of the inspecting location; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

## General **USCD** Status Code Mandatory Identifies the current operational state Does not Carry Forward.

## **Permissible Values for USCD**

ACTIVE INACTIVE 1

Ρ PRE-REGISTERED

#### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-Registered.
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID	0001
The equipment stenciled number	

#### Validation Rule for 0001

-Equipment Number must not be larger than 6 digits (i.e., 999999)

#### NOTES:

- Equipment ID includes the mark and number stenciled on the equipment. Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD999999).
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

Mechanical Designation Mandatory	UMMD
Equipment description without physical dimensions	•

Used for Transportation Codes.

## **Permissible Values for UMMD**

Steel Wheel Set

Equipment Type Code	UMET
An alpha numeric code that describes the physical attributes of	of equipment

System Generated Field. This element is not eligible for Input.

### NOTES:

• Please Refer to Appendix I for More information Regarding ETC Generation

Built Date Mandatory	BLDT
The date the construction of the equipment is complete	•

Data is Confidential. Used for Transportation Codes. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for BLDT Minimum Maximum 12/31/9999 1/1/1900

## Validation Rule for BLDT

- -Built Date must be within the last 99 years
- -Built Date must not be in the future for equipment in Active Status
- -Prior and target equipment's Built Date (BLDT) must match for restenciling

#### NOTES:

- Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

Rebuilt / ILS Date	RBDT
The date the re-construction of the equipment is complete	

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

#### Range of Values for RBDT

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for RBDT

-Rebuilt/Increased Life Service Date must be after the Built Date (BLDT)

-Rebuilt Date must not be more than 70 years after the Built Date (BLDT)

#### NOTES:

- Railroad cars -- applicable only to cars meeting status as provided in both STB Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt Date unless car has been approved by the AAR.

Rebuilt Flag	RBFL
Identifies the equipment is nearing its end of life cycle	

Data is Confidential. System Generated Field. This element is not eligible for Input.

## **Permissible Values for RBFL**

No Υ

Owner Mandatory	UMOW
Primary reporting mark of the railroad or private company owning the	ne car 🌘

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### NOTES:

• Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.

Equipment Group Mandatory	0002
Identifies the various major car types	•-
Used for Transportation Codes. Affects Rating.	

**LESE** Lessee The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil

## Validation Rule for LESE

-Umler Owner (UMOW) and Lessee are not allowed to be equal

#### NOTES:

In order to assign privately marked cars to a pool, a railroad reporting mark must be reported.

**Maintenance Party** MNPT The parent reporting mark of the company responsible for the maintenance and

repairs of the equipment Does not Carry Forward.

**Mark Owner Category B201** 

#### The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

## Permissible Values for B201

- В **US Private**
- С Canadian Private
- F Foreign Private
- Н Canadian Class II

=Mandatory ▲=Used in ETC Generation = Affects Rating

- Canadian Class I
- Mexican Class I
- Κ Canadian Class III
- Mexican Private Μ
- Ν US Private Steamship
- 0 Canadian Private Steamship
- Р Mexican Private Steamship
- Q Foreign Private Steamship
- R US Class II Railroad
- U US Class I Railroad
- US Class III Railroad V
- Mexican Class II Railroad W
- Υ Mexican Class III Railroad

#### NOTES:

• This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry.

**Prior Equipment ID** 

**PRID** 

The previous reporting mark and number of the equipment

Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for PRID

- -Prior and target equipment's Built Date (BLDT) must match
- -The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

Prior ID enables equipment records to share the same historical lineage. Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

**Last Update Date** 

**B122** 

#### Date of the last Umler element change

System Generated Field. This element is not eligible for Input.

**Equipment Add Date** 

B082

## Date the reporting mark and number was added to the Umler system

System Generated Field. This element is not eligible for Input.

**Status Change Reason** 

**USCR** 

#### Identifies the reason for the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

## Permissible Values for USCR

- Initial Load
- Μ Movement
- 0 Status Changed Manually
- R Restencil

#### NOTES:

- If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

**Status Change Date** 

**USCT** 

## Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

**Equipment Identification** 

FINN

Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

#### NOTES:

• Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections.

**Conflict Status** 

B050

#### Identifies the escalation level of equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B050

- Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Date of Original Conflict** 

#### The date the equipment was originally placed in the current conflict

System Generated Field. This element is not eligible for Input.

**Next Conflict Status** 

**B135** 

#### Identifies the next escalation level of an equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B135

- 1 Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Notice Indicator** 

**B137** 

### Identifies equipment in error in Umler Notice Management

System Generated Field. This element is not eligible for Input.

**Conflict Status Next Date** 

**B062** 

## The date the conflict status will be escalated

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**Rate Indicator** 

A070

## Indicates the rate type applicable to the unit

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for A070

- Zero-Rated Due to Conflict Errors 0
- Zero-Rated Scrap (S\_,SX), AAR Overage (XA), FRA Overage (YA), Umler 6 Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].

#### NOTES:

• If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.

**First Movement Date** 

**USAT** 

The first movement date under the stenciled mark of the equipment

This element is not eligible for Input. Does not Carry Forward.

Equipment Add Company	B083
The reporting mark of the company that added the equipment	
System Generated Field. This element is not eligible for Input.	

Registration Reason	B174

## The code indicating the reason this equipment is added

## Does not Carry Forward. Permissible Values for B174

A Add-Back N New P Pending Restencil R Restencil

Restencil Program Ind	B177
Identifies the equipment is under a restencil program	

#### Permissible Values for B177

Y Yes

Delete Reason Code	B064
A code that designates the reason the equipment has been deleted	

Value does not carry forward for Add Back.

#### Permissible Values for B064

- A Restenciled
- D Destroyed or wrecked
- L Lease terminated, removed from fleet
- P Retired unserviceable beyond economic repair
- R Rebuilt
- S Sold Serviceable
- W Over age retired for dismantling
- Y Error, reporting did not exist
- Z Other

## Weight

#### Tare Weight Mandatory

The equipment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

Affects Rating.

## Range of Values for A259

Minimum	Maximum
9000	15000

#### NOTES:

- Do not report an average Tare Weight for car series, except for Pre-Registered cars
- When cars are made active, the actual Tare Weight must be recorded

## Weighing Status Mandatory

A289

A259

Indicates the weight information is an estimate or an actual measurement •

Value does not carry forward for Single Clone / Multi-Clone.

## Permissible Values for A289

A Actual E Estimated

### Validation Rule for A289

 -When Status Code changes to Active or Inactive Weighing Status must be reported as Actual (A) or Verified (V) within 60 days of Status Code change

## **Dimension**

Height of Bogey Mandatory	A120
Height Of Bogie	•

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A120

Minimum	Maximum
2 ft 6 inches	5 ft 0 inches

## **Specification**

Truck Count B256

#### The total number of trucks on the equipment

System Generated Field. This element is not eligible for Input.

#### Range of Values for B256

Minimum	Maximum
1	1

# Axle Count *Mandatory*The total number of axles on the equipment

#### Range of Values for A024

Minimum	Maximum	
2	999	

#### Validation Rule for A024

- -Axle Count for an articulated car must be greater than or equal to ((Connected Unit Count x 2) + 2)
- -Axle Count for a draw bar connected car must be greater than or equal to (Connected Unit Count x 4)

# Wheel Bearing Type *Mandatory*Indicates the wheel bearing journal design for the equipment

#### Permissible Values for B191

P Plain R Roller

#### Validation Rule for B191

- -Cars with Plain Bearings will have a Transportation Code (TCOD) and Transportation Condition Code (TCCD) of either YA, S, SX, or XJ
- -Equipment cannot have Plain Bearings if Built Date (BLDT) is on or after January 1, 1993  $\,$

Brake Shoe Type Mandatory	B026
Indicates the type of brake shoe on the equipment	•

## Permissible Values for B026

- C Tread Conditioning
- H High Friction Composite
- L Low Friction Composite/Cast Iron

Non-Rail Connector Eqpd	B295
Bogey Coupler Equipped	<b>A</b>

## Used in ETC Generation.

## Permissible Values for B295

Y Yes

## CC Side Bearing Type

A146

Indicates the travel range of the constant contact side bearings installed on the equipment

#### Permissible Values for A146

- LC Long Travel Constant Contact
- SC Short Travel Constant Contact

## Empty/Load Device Eqpd

B075

Indicates that the air brake system includes a device to determine if the equipment is empty or loaded, and then varies the braking forces accordingly

## Permissible Values for B075

/ Yes

Remote Monitoring Device	B176
Indicates the equipment has a device that transmits a signal or records	data

Permissible Values for B176

DAV

DETR

DIFC

Yes

#### NOTES:

• Per AAR S-2045, This may be data related to ride quality, geographic location, temperature/condition of the load, load/empty status, etc.

Intermediate Conn Style

**B115** 

Indicates the method by which two or more pieces of equipment are connected

#### Permissible Values for B115

- Articulated Connector **Drawbar Connector** D
- Validation Rule for B115
  - -Intermediate Connector Style is required for multi-unit equipment
  - -Intermediate Connector Style must not be reported for single unit

#### Validation Rule for A035

-Equipment built or rebuilt on or after July 1, 2010 cannot have a Equipment Builder of Unknown

- -Equipment with a Built Date (BLDT) on or after July 1, 2010 cannot have an Equipment Builder Code of OWNER RAILROAD
- -Equipment Builder can have a value of MULT only if the equipment has multiple units

**Builder Lot Code** 

A unique identifier for a group of equipment built by one manufacturer under the same contract

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for B030

-Equipment built or rebuilt on or after June 28, 2012 must have a value for **Builder Lot Code** 

**Built Country** B031 The country where the equipment was constructed

Data is Confidential.

Permissible Values for B031

Canada Mexico

US **United States** 

**Rebuilt Country B170** The country where the equipment was re-constructed

Permissible Values for B170

CA Canada MX Mexico

US **United States** 

Cost **Original Cost** A184 The original manufacturer selling price

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A184

range of values for A104		
Minimum	Maximum	
0	999999	

#### Validation Rule for A184

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported.
- -Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost
- -Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

### NOTES:

- Original Cost is never altered. It is the cost of the equipment to the original owner.
- For railroad-marked cars, report in US dollars the original ledger value of the original owner For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24
- The original cost is used in the settlement of AAR Interchange Rule 107 Office Manual.
- For connected unit cars report the total original cost for all units in the set.
- Numeric, applicable to all railroad-marked cars Also, applicable to privately marked covered hopper (LO) cars.
- Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

**Ledger Value** A150 The sum of original cost and additions & betterments

Data is Confidential. Value does not carry forward for Single Clone / Multi-

Range of Values for A150 Minimum Maximum

999999

#### **Validation Rule for A150**

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

Total A&B A003

System generated sum of all reported amounts in A&B Amount (A317), in US

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A003

Minimum	Maximum
0	99999999

#### NOTES:

- For railroad-marked cars, report the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not be used to report Ledger Value.
- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.
  - Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
  - o Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.
- For connected unit cars report the total Truck Location A for all units in the

Ind for Pos/Neg Total A&B

A code indicating the positive or negative adjustment to the original cost of the

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A128

Negative

Positive

A&B Pos/Neg Ind

A316

A code indicating the positive or negative adjustment to the individual addition

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A316

Negative Р Positive

#### Validation Rule for A316

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -The A&B Indicator is required when Additions & Betterments are reported.
- -The A&B Indicator must not be reported if Additions & Betterments are not reported.

**A&B Amount** A317

The amount of the individual addition and betterment added to or subtracted from the original cost of the equipment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A317

Minimum	Maximum	
1	999999	

#### Validation Rule for A317

-When entering an individual addition & betterment; A&B Date Done (A319), A&B Type (A318), A&B Pos/Neg Ind (A316), and A&B Amount (A317) must be reported

**A&B Date Done** A319

#### The date of the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Range of Values for A319

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for A319

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -Addition and Betterment Date Done cannot be earlier than Built Date (BLDT)
- -Additions & Betterments Date Done cannot be later than today's date.

**A&B Type** 

The type of individual addition and betterment as defined by Rule 107

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Permissible Values for A318

General - Capitalized Additions and Betterments GNRI INIT

Initial load of historical A&B amount as of Umler 4.6 implementation

date

#### Validation Rule for A318

- -For each equipment, only one Individual A&B Type can have a value of
- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.

## Car Management

**Pool Number** P001

Unique number used to indicate the grouping of equipment for a particular purpose

Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add Back.

**User Routing Instructions** 

**TCUR** 

The routing instruction reported by the user Used for Transportation Codes.

## Permissible Values for TCUR

- Trailer Service Rule 2 2
- G Contaminated commodity service
- Μ Mark canceled
- 0 Owner requested return
- U Unassigned equipment

#### NOTES:

• For further explanation reference Appendix E.

**Umler Transportation Code** 

TCOD

#### The type of assigned service, empty routing or restriction of the equipment

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

· For further explanation reference Appendix E.

**Transportation Cond Code** 

**TCCD** 

## The AAR or FRA interchange restriction code

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

· For further explanation reference Appendix E.

**TCME Mechanical Restriction** 

User reported or system generated type of mechanical restriction

Used for Transportation Codes.

=Mandatory ▲=Used in ETC Generation = Affects Rating

- 262 -

\*=Conditionally Mandatory

#### **Permissible Values for TCME**

- Scrap
- Х AAR Interchange Restriction
- **FRA Interchange Prohibited**

#### NOTES:

• For further explanation reference Appendix D.1

Mech Restriction Reason	TCMR
The explanation of the Mechanical Restriction (TCME)	

Used for Transportation Codes.

#### **Permissible Values for TCMR**

- Restricted Due to Age (Over 40-AAR, Over 50-FRA) Α
- В Restricted Due to Air Brakes
- C Restricted Due to Axles
- **Restricted Due to Couplers and Couplers Parts** D
- **Restricted Due to Couplers Yokes**
- G Restricted Due to Draft Gears
- Restricted Due to Journal Bearing and Journal Lubrication J
- Ν Restricted Due to Trucks
- Ρ Restricted Due to Truck Side Frames
- Restricted Due to Trucks Bolsters Т
- U Restricted by AAR or Owner
- W Restricted Due to Wheels
- Restricted Due to Scrap or Early Warning Χ
- Z Restricted Due to Umler Conflict (Not Valid for User Input)

#### NOTES:

- For further explanation reference Appendix D.2.
- The assignment of the Transportation Codes S\_, SX, XA, XZ and YA generate the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and

**Sys Gen Routing Inst TCGR** 

#### The routing instruction generated by the system

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.5.

## Truck Components

**Axle Spacing Distance** B020 The distance between axle centers on the same truck

#### Permissible Values for B020

- 53 53 Inches
- 54 Inches 54
- 55 55 Inches
- 60 60 Inches
- 61 61 Inches
- 62 62 Inches
- 63 63 Inches 64 64 Inches
- 65 65 Inches 68 68 Inches
- 70 70 Inches
- 71 71 Inches
- 72 72 Inches
- 73 73 Inches
- 74 74 Inches
- 76 76 Inches
- 78 78 Inches
- 99 Axle Space Unknown

Truck Axle Count B252

The number of axles per truck

Range of Values for B252

Minimum	Maximum		
1	2		

**Journal Size** A147 The size of the journal bearing

## Permissible Values for A147

Α	3-3/4 X 7	В	4-1/4 X 8	C	5 X 9
D	5-1/2 X 10	Ε	6X11	F	6-1/2 X 12
G	7 X 12	Н	7 X 14	K	6-1/2X9
М	7 X 9				

#### Validation Rule for A147

- -4-axle equipment with Journal Size B and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 103,000 lbs.
- -Journal Size B (4 1/4 x 8) requires a Gross Weight of 154,000 lbs. for 6-axle cars unless the car is Star Coded
- -4-axle equipment with Journal Size C and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 142,000 lbs.
- -Journal Size C (5 x 9) requires a Gross Weight of 213,000 lbs. for 6-axle cars unless the car is Star Coded
- -4-axle equipment with Journal Size D and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 177.000 lbs.
- -Journal Size D (5 1/2 x 10) requires a Gross Weight of 265,000 lbs. for 6-axle cars unless the car is Star Coded
- -4-axle equipment with Journal Size E and Star Code (A247) is not populated, must have Gross Rail Load (A266) of 220,000 lbs.
- -Journal Size E (6 x 11) requires a Gross Weight of 179,000 lbs. for 4-axles ETC P---, Q---, V--- cars only (cars with 28 inch wheels) unless the car is Star Coded
- -Journal Size E (6 x 11) requires a Gross Weight of 330,000 lbs. for 6-axles
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 263,000 lbs.
- -4-axle equipment with Journal Size F or K, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1 or 2, must have Gross Rail Load (A266) of 286,000 lbs.
- -Journal Size F requires a Gross Weight of 394,500 lbs. or 429,000 lbs. for 6axle cars unless the car is Star Coded.
- -4-axle equipment with Journal Size G or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) is not populated, must have Gross Rail Load (A266) of 315,000 lbs.
- -4-axle equipment with Journal Size G, K, or M, Star Code (A247) is not populated, and Qualification for Increased Gross Rail Load (B344) of 1, must have Gross Rail Load (A266) of 286,000 lbs.
- -Journal Size G (7 x 12) requires a Gross Weight of 472,000 lbs. for 6-axle cars unless the car is Star Coded
- -Journal Size H (7 x 14) requires a Gross Weight of 315,000 lbs. for 4-axle cars unless the car is Star Coded
- -Journal Size H (7 x 14) requires a Gross Weight of 472,000 lbs. for 6-axle cars unless the car is Star Coded
- -Journal Size I (6 x 11 and 6 1/2 x 12) or J (6 x 11 and 7 x 12) are only applicable to articulated or draw-bar cars
- -Journal Size Code M (7 x 9) requires a Gross Weight of 472,000 lbs. for 6axles
- -Unstarred 4 Axle Cars with GRL of 315,000 and no IGRL reported and Unstarred cars with Journal Size of G or M must have a Wheel Size of 38 inches
- -Gross Weight must be 394,000 lbs. for 6 -axle cars with Journal Size K
- A, B and C Journal Classes are prohibited in Interchange per Rule 90.B.4

**Wheel Diameter** A294

#### The diameter of the wheels Permissible Values for A294

30 Inches 33 Inches 28 28 Inches 30 33 36 36 Inches 38 38 Inches

Validation Rule for A294

#### **Data Specification Manual**

- -UnStarred Cars with Gross Weight of 286,000 lbs. and Increased Gross Rail Load of 2 must have a Wheel Diameter of 36 inches
- -UnStarred Cars with Gross Weight of 286,000 lbs. and Increased Gross Rail Load of 2 must have a Wheel Diameter of either 36 or 38 inches
- -Cars with an Increased Gross Rail Load of 1 and Journal of G or M must have a Wheel Diameter of 38 inches

**Stability Device Equipped** 

R199

Indicates a stability device is present on the truck

#### Permissible Values for B199

Y Yes

## Miscellaneous

Commercial Owner CIF

R049

The Customer Identification File (CIF) number for a commercial owner at a specific location

**Commercial Lessee CIF** 

B048

The Customer Identification File (CIF) number for a commercial lessee at a specific location

**Umler Effective Date** 

FFDT

The date the rating activity (pre-registration, modification, etc.) is expected to occur

This element is not eligible for Query. Does not Carry Forward.

#### Validation Rule for EFDT

-Effective Date cannot be set to more than 13 months in the future.

#### NOTES:

 Effective Date will default to the 1st of the following month that equipment is registered

## Inspection

ABT Due Date (Repair Track)

**DU13** 

The due date of the air brake test per AAR Field Manual Rule 3

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### ABT 5-8 Year Due Date

**DU58** 

The 5-8 year due date for the air brake test (ABT) after the ABT Due Date (Repair Track)

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

### Inspection Date Done

DTDN

The date the inspection was completed; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Validation Rule for DTDN

-The inspection date must not be 60 days before the Build Date

#### **Inspection Due Date**

INDD

The due date of the next inspection; used for all inspection types reported on equipment

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

## Inspection Performer

PERF

The SCAC that completed the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### **Inspection Reporter**

RFPT

The SCAC that reported the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Location/SPLC

SPLC

The SPLC of the inspecting location; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Air Brake Test Device

B523

Indicates the type of test device used to perform the Air Brake Test

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Permissible Values for B523

- A Automatic (Non 4-Pressure)
- M Manual
- P Automatic (4-Pressure)

#### Validation Rule for B523

-Air Brake Test Device (B523) must be reported for Air Brake Test inspection reported on or after December 10, 2020

# General Status Code Mandatory USCD Identifies the current operational state

Does not Carry Forward.

#### **Permissible Values for USCD**

A ACTIVE I INACTIVE

P PRE-REGISTERED

#### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-Registered.
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID	0001
The equipment stenciled number	

#### Validation Rule for 0001

- -Equipment Number must not be larger than 6 digits (i.e., 999999) **NOTES:**
- Equipment ID includes the mark and number stenciled on the equipment.
   Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD99999).
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

Mechanical Designation Mandatory	UMMD
Equipment description without physical dimensions	•

Used for Transportation Codes.

## Permissible Values for UMMD

U Container

Equipment Descriptor Mandatory	B341
Additional information about the type of equipment used in conj	junction with
the Mechanical Designation to generate the Equipment Type (	Code (ETC) for
Intermedal Flat Locomotive Chassis Container and Trailer of	quinmont

groups
Value does not carry forward for Equipment Group Change.

#### Permissible Values for B341

UB General Service Dry Box Container

UBE Special Equipped (Straight Floor Closed) Container

UBI Container - Insulated

UBR Mechanical Refrigerator Container

UFB Flat Rack/Flat Bed Container

UH Bulk Hopper Container

UOT Open Top Container

UTK Tank Container

# Equipment Type Code UMET An alpha numeric code that describes the physical attributes of equipment

System Generated Field. This element is not eligible for Input.

#### NOTES:

• Please Refer to Appendix I for More information Regarding ETC Generation

The date the construction of the equipment is complete	•

Data is Confidential. Used for Transportation Codes. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for BLDT

Minimum	Maximum		
1/1/1900	12/31/9999		

#### **Validation Rule for BLDT**

 -For Trailers, Containers and Chassis, the age of the equipment if not rebuilt cannot be in excess of 50 years from today
 -Prior and target equipment's Built Date (BLDT) must match for

restenciling

#### NOTES:

- Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

Rel	built / ILS Date	е			RBDT

The date the re-construction of the equipment is complete

Data is Confidential. Value does not carry forward for Single Clone /  $\,$  Multi-Clone.

#### Range of Values for RBDT

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for RBDT

- -For Trailers, Containers and Chassis, the Built Date cannot be on or before 25 years before the Rebuilt Date
- -For Trailers, Containers and Chassis, the Built Date cannot be on or after the Rebuilt Date

#### NOTES:

- Railroad cars -- applicable only to cars meeting status as provided in both STB Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt
  Date unless car has been approved by the AAR.

Rebuilt Flag	RBFL
Identifies the equipment is nearing its end of life cycle	

Data is Confidential. System Generated Field. This element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for RBFL

N No Y Ye

## Owner *Mandatory*Primary reporting mark of the railroad or private company owning the car

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil /

#### NOTES:

 Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.

Equipment Group Mandatory	0002
Identifies the various major car types	• -

Used for Transportation Codes. Affects Rating.

Lessee LESE
The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### Validation Rule for LESE

-Umler Owner (UMOW) and Lessee are not allowed to be equal

## NOTES:

 In order to assign privately marked cars to a pool, a railroad reporting mark must be reported.

●=Mandatory ▲=Used in ETC Generation = Affects Rating - **266** - **\***=Conditionally Mandatory June 2025

## **Data Specification Manual**

## Maintenance Party MNPT

The parent reporting mark of the company responsible for the maintenance and repairs of the equipment

Does not Carry Forward.

Mark Owner Category B201

#### The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

#### Permissible Values for B201

- B US Private
- C Canadian Private
- F Foreign Private
- H Canadian Class II
- I Canadian Class I
- J Mexican Class I
- K Canadian Class III
- M Mexican Private
- N US Private Steamship
- O Canadian Private Steamship
- P Mexican Private Steamship
- Q Foreign Private Steamship
- R US Class II Railroad
- U US Class I Railroad
- V US Class III Railroad
- W Mexican Class II Railroad
- / Mexican Class III Railroad

#### NOTES:

 This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry.

Prior Equipment ID PRID

The previous reporting mark and number of the equipment

Value does not carry forward for Single Clone / Multi-Clone.

#### **Validation Rule for PRID**

- -Prior and target equipment's Built Date (BLDT) must match
- -The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

#### NOTES:

Prior ID enables equipment records to share the same historical lineage.
 Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

Last Update Date B122

Date of the last Umler element change

System Generated Field. This element is not eligible for Input.

Equipment Add Date B082

Date the reporting mark and number was added to the Umler system

System Generated Field. This element is not eligible for Input.

Status Change Reason USCR

## Identifies the reason for the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

#### **Permissible Values for USCR**

- I Initial Load
- M Movement
- O Status Changed Manually
- R Restencil

#### NOTES:

- · If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

Status Change Date USCT

Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

**Licensing State/Province** 

A154

#### Licensing State / Province

## Permissible Values for A154

#### **Equipment Identification**

FINN

## Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

#### NOTES:

Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections.

**Conflict Status** B050

Identifies the escalation level of equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

## Permissible Values for B050

- Subject to Zero-Rating
- Subject to Restricted in Interchange 2
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

#### **Date of Original Conflict**

B063

The date the equipment was originally placed in the current conflict

System Generated Field. This element is not eligible for Input.

**Next Conflict Status** 

**B135** 

B062

Identifies the next escalation level of an equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B135

- Subject to Zero-Rating 1
- Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**B137 Notice Indicator** 

Identifies equipment in error in Umler Notice Management

System Generated Field. This element is not eligible for Input.

**Conflict Status Next Date** The date the conflict status will be escalated

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**Rate Indicator** A070

Indicates the rate type applicable to the unit

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for A070

- 0 Zero-Rated Due to Conflict Errors
- Units subject to special lease arrangement 1
- Zero-Rated Scrap (S\_,SX), AAR Overage (XA), FRA Overage (YA), Umler Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].

#### NOTES:

• If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.

**First Movement Date USAT** 

The first movement date under the stenciled mark of the equipment

This element is not eligible for Input. Does not Carry Forward.

**Equipment Add Company** 

B083

B174

The reporting mark of the company that added the equipment System Generated Field. This element is not eligible for Input.

The code indicating the reason this equipment is added

Does not Carry Forward.

**Registration Reason** 

#### Permissible Values for B174

Add-Back New Α Ν Р Restencil Pending Restencil

=Mandatory

## **Umler**

## **Data Specification Manual**

Restencil Program Ind	B177
Identifies the equipment is under a restencil program	

#### Permissible Values for B177

Yes

B064 **Delete Reason Code** 

A code that designates the reason the equipment has been deleted

Value does not carry forward for Add Back.

#### Permissible Values for B064

- Restenciled Α
- D Destroyed or wrecked
- Lease terminated, removed from fleet L
- Р Retired unserviceable beyond economic repair
- R Rebuilt
- S Sold Serviceable
- W Over age retired for dismantling
- Error, reporting did not exist Υ
- 7 Other

## Weight

## Gross Rail Load/Weight

A266

The maximum permissible weight on rail of the equipment and the load, reported in pounds

#### Range of Values for A266

Minimum	Maximum
4900	94000

#### Validation Rule for A266

- -Container Gross Weight must not exceed 92,500 lbs. for Tank Containers (Equipment Descriptor of UTK)
- -Gross Rail Load must be equal to the Load Limit (LDLT) plus the Tare Weight (A259)

#### NOTES:

- Gross Rail Load must be equal to the Load Limit (LDLT) plus the Tare Weight (A259)
- For connected unit cars report the total gross rail load of the entire set

Use Table 1 below to determine Gross Rail Load, if Qualification for Increased Gross Rail Load (B344) does not exist.

TABLE 1 -

Journal Size	Load per Axle	Gross Rail Load for 4-
		axle Equipment
B - 4 1/2" x 8"	25,750 lbs.	103,000 lbs.
C - 5" x 9"	35,500 lbs.	142,000 lbs.
D - 5 1/2" x 10"	44,250 lbs.	177,000 lbs.
E - 6" x 11"	55,000 lbs.	220,000 lbs.
F - 6 1/2" x 12"	65,750 lbs.	263,000 lbs.
G - 7" x 12"	78,750 lbs.	315,000 lbs.
K - 6 1/2" x 9"	71,500 lbs.	263,000 lbs.
M - 7" x 9"	78,750 lbs.	315,000 lbs.

Use Table 2 below to determine Gross Rail Load for 4-axle equipment if Qualification for Increased Gross Rail Load (B344) exists.

#### TABLE 2 -

-	ication for	Journal Size	Gross Rail Load
	ed Gross Rail d (B344)		
1		K - 6 1/2" x 9"	286,000 lbs.
1		G – 7" x 12"	286,000 lbs.
1		M – 7" x 9"	286,000 lbs.
2		F - 6 1/2" x 12"	286,000 lbs.
2		K - 6 1/2" x 9"	286,000 lbs.
3		F - 6 1/2" x 12"	268,000 lbs.
3		K - 6 1/2" x 9"	268,000 lbs.

A Gross Rail Load less than the listed or calculated values may be entered; however:

- 3. Star Code (A247) must be R or S, and
- 4. Load Limit (LDLT) must also be reduced, ensuring Tare Weight (A259) plus Load Limit (LDLT) equals the reported Gross Rail Load.

For equipment having two or more different journal sizes, see following examples:

Example for Drawbar Connected:

A 5-unit drawbar connected car has 20 axles.

The end units (Locations A and B) each have 4 axles with E - 6" x 11" journals. The intermediate units (Locations C, D, and E) each have 4 axles with F-61/2" x 12" journals.

- Using TABLE 1, the Gross Rail Load would be:
- 8 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 440,000 lbs.
- +12 ea. F-6 1/2" x 12" journal axles X 65,750 lbs. per axle = **Gross Rail** 789,000 lbs.

Load = 1,229,000 lbs.

- Example for IFLT & VFLT:
- A 5-unit articulated intermodal car has 6 trucks (12 axles).
- The end trucks (Locations A and B) each have 2 axles with E 6" x 11"

The intermediate trucks (Locations C, D, E, and F) each have 2 axles with G - 7" x 12" journals.

Using TABLE 1, the Gross Rail Load would be:

4 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 220,000 lbs. 8 ea. G-7" x 12" journal axles X 78,750 lbs. per axle = 630,000 lbs. Gross Rail Load = 850,000 lbs.

## **Tare Weight**

A259

The equipment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

## Range of Values for A259

Minimum	Maximum
600	31000

#### Validation Rule for A259

- -Container Tare Weight must not exceed 19,000 lbs. for Containers other than Tanks (Equipment Descriptor other than UTK)
- -Container Tare Weight cannot be greater than 19000 lbs. for all Containers other than Tanks (Equipment Descriptor - not UTK)
- -Container Tare Weight cannot be less than 1,000 lbs. for Tank Containers (Equipment Descriptor of UTK)
- -Container Tare Weight cannot be greater than 31000 lbs. for Tank Containers (Equipment Descriptor - UTK)
- -Container Gross Weight cannot be greater than 92500 lbs. for Tank Containers (Equipment Descriptor - UTK)
- -Container Refrigeration Unit Fuel Capacity cannot be greater than 1500 gallons for Mechanical Refrigerator Containers (Equipment Descriptor UBR)
- -Container Gallonage Capacity is only applicable to Tanks
- -Container Gallonage Capacity is only applicable to Tanks

#### NOTES:

- Do not report an average Tare Weight for car series, except for Pre-Registered cars
- When cars are made active, the actual Tare Weight must be recorded

**Load Limit** LDLT

The maximum permissible weight of the commodity that can be loaded into the equipment, reported in pounds

#### Range of Values for LDLT

Minimum	Maximum
0	70000

<b>Cubic Feet Capacity</b>	A067
The manifestory interior collin fact consists of the consistency	

#### The maximum interior cubic feet capacity of the equipment

#### Range of Values for A067 Minimum Maximum 4500

#### Validation Rule for A067

-Container Cubic Feet Capacity is not applicable to Tanks and Flats (Equipment Descriptor UFB or UTK)

#### **Gallonage Capacity** A297 The number of gallons the equipment will hold

Range of Values for A237		
Minimum	Maximum	
1500	9000	

## **Dimension**

#### **Outside Length Mandatory**

**OSLG** 

The outside length over pulling faces of couplers in normal position

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for OSLG

Minimum	Maximum
5 ft 11 inches	57 ft 0 inches

#### NOTES:

- · For connected unit cars report the maximum coupled length of the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

#### Outside Extreme Width Mandatory

A186

The outside extreme width of the equipment

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in

## Range of Values for A186

Minimum	Maximum
4 ft 6 inches	8 ft 7 inches

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06'

#### Outside Extreme Height Mandatory

A185

## Height from top of rail to extreme projecting height

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

## Range of Values for A185

Minimum	Maximum
1 ft 0 inches	13 ft 6 inches

#### Validation Rule for A185

- -Container Outside Extreme Height for Tank Containers (Equipment Descriptor of UTK) must be greater than or equal 4 feet
- -Container Outside Extreme Height for Tank Containers (Equipment Descriptor of UTK) must be less than or equal 8 feet 6 inches

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06'

#### **Outside Height Extr Width Mandatory**

A187

The highest point at which the extreme width of the equipment occurs

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A187

Minimum	Maximum
0 ft 8 inches	13 ft 6 inches

#### Validation Rule for A187

-Outside Height Extreme Width must be less than or equal to Outside Extreme Height

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06'

A135

The inside length of the equipment from end to end inside walls, linings, and permanent bulkheads

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A135

Minimum	Maximum
5 ft 0 inches	53 ft 0 inches

## Validation Rule for A135

- -Inside Length must not be greater than Outside Length
- -Inside Length/Inside Platform Length must be less than or equal to Outside Length (OSLG)
- -Is not applicable to Inside Length/Inside Platform Length for Trailer/Container - Bulk Hopper, Tank or Flat (Mechanical Designation of UH, or UTK)

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the shortest dimension of a unit in the set.

**Inside Width** 

The inside width of the equipment from side walls and linings

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A138

Minimum	Maximum	
4 ft 0 inches	8 ft 4 inches	

## Validation Rule for A138

- -Inside Width/Inside Platform Width must not exceed Outside Extreme
- -Inside Width/Inside Platform Width must not exceed Outside Extreme Width
- -Inside Width/Inside Platform Width is not applicable to Trailer/Container - Tank or Flat (Mechanical Designation of UTK)

• For connected unit cars report the shortest dimension of a unit in the set.

## **Inside Height**

A133

The inside height of the equipment from the floor to the top of the side, or to the lowest point of the interior ceiling

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A133

Minimum	Maximum
1 ft 0 inches	12 ft 6 inches

#### Validation Rule for A133

- -Container Inside Height is only applicable to Containers with Equipment Descriptor other than UFB, UTK, UOT, or UH
- -Inside Height must not exceed Outside Extreme Height (A185)

For connected unit cars report the shortest dimension of a unit in the set.

**Deck Height Above Ground** 

B149

Inside Height/Deck Hgt.

Displayed in feet and inches on the Web. Stored in inches.

Range of Values for B149

Minimum	Maximum
1 ft 0 inches	12 ft 6 inches

#### Validation Rule for B149

 -Container Platform Deck Height is only applicable to Flat Rack/Flat Bed Containers (Equipment Descriptor of UFB)

#### **CONT Gooseneck Width**

B051

For CONT only. The measurement of the width of the container gooseneck tunnel where the gooseneck from the Chassis is inserted. This centers the container to the gooseneck chassis for a more secured transport.-New

Displayed in feet and inches on the Web. Stored in inches.

m 7		
	T = 1	ra i

End Door Type A081
End Door Type

#### Permissible Values for A081

- 1 Hinged 2 Overhead/Rollup
- 3 Other

#### Validation Rule for A081

-Container End Door Type is not applicable to Bulk Hoppers, Tanks, and Flats (Equipment Descriptor UH, UFB, or UTK)

End Door Width	A082
The width of the end door opening in inches	

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A082

Minimum	Maximum
3 ft 0 inches	8 ft 4 inches

#### Validation Rule for A082

- -End Door Width must not be reported if Trailer/Container End Door Type is not reported
- -End Door Width requires End Door Type of Trailer/Container with other
- -End Door Width is not applicable to Trailer/Container Bulk Hopper, Tank or Flat (Mechanical Designation of UH, UFB, UTK, ZBH, ZTK, or ZFB)

#### NOTES:

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the dimension of the smallest end door width
  of a unit in the set.

<b>End Door Height</b>		A080

The height of the end door opening in inches

Displayed in feet and inches on the Web. Stored in inches.

## Range of Values for A080

Minimum	Maximum	
5 ft 0 inches	12 ft 6 inches	

#### Validation Rule for A080

- -End Door Height must not be reported if End Door Width is not reported
- -End Door Height must be reported if End Door Width is reported
- -End Door Height must not be reported if Trailer/Container End Door Type is not reported
- -End Door Height must be reported if End Door Type of Trailer/Container is reported
- -End Door Height is not applicable to a Trailer/Container Bulk Hopper, Tank or Flat (Mechanical Designation of UH, UFB, UTK, ZBH, ZTK, or ZFB)

#### NOTES:

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the dimension of the smallest end door height of a unit in the set.

## **Specification**

Corner Casting A053

#### **Container Corner Casting**

#### Permissible Values for A053

ISO ISO Type Only, Oval Opening 1 1/8 inch bottom wall

MAT Matson Only

OTH Other designs of corner castings

SEA Sea Land Only

USA Includes ASA and ANSI Oval Opening 9/16 inch bottom wall

#### **Stackability Count**

B055

For CONT only. The maximum number of containers that can be stacked on this container. 0-Not Stackable; 1-8 Stackable-New

#### Range of Values for B055

Minimum	Maximum
0	8

TRLR/CONT Body Material A031

National Alabama Corporation NACA

SING Singamas **STOUGHTON** SU UNKN Unknown

#### Validation Rule for A035

- -Equipment built or rebuilt on or after July 1, 2010 cannot have a Equipment Builder of Unknown
- -Equipment with a Built Date (BLDT) on or after July 1, 2010 cannot have an Equipment Builder Code of OWNER RAILROAD.
- -Equipment Builder can have a value of MULT only if the equipment has multiple units.

**Builder Lot Code** A unique identifier for a group of equipment built by one manufacturer under the same contract

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

#### Validation Rule for B030

-Equipment built or rebuilt on or after June 28, 2012 must have a value for **Builder Lot Code** 

**Built Country** B031 The country where the equipment was constructed

## Data is Confidential.

#### Permissible Values for B031

China CACanada CN CZ Czech Republic IN India KR South Korea MXMexico SG Singapore US **United States** 

**Rebuilt Country** B170 The country where the equipment was re-constructed Permissible Values for B170

CA Canada CN China KR South Korea MX Mexico US SG Singapore United States

**Refrig Emission Code B345**  California State Emission standards for refrigeration units

Value does not carry forward for Single Clone / Multi-Clone.

Permissible Values for B345

Not Qualified Qualified N Ω

Ultra-Qualified

## **Feature**

Floor Material A104

Describes the type of construction material used for the equipment floor

#### Permissible Values for A104

- 01 Aluminum
- 02 Aluminum (Ribbed)
- 05 Composite Nailable (considered same as wood
- 06 Composite Nailable, Reinforced (considered same as wood)
- 14 Other
- 19 Standard Steel
- 23 Steel Nailable (includes alternate wood and steel floor
- 24 Steel Nailable, Reinforced (includes alternate wood and steel floor
- 25 Standard Steel, Reinforced
- 30 Wood
- 32 Wood, Double
- 33 Wood, Double, Reinforced
- 34 Wood Floor with Steel Protective Plates (includes perforated steel)
- 35 Wood Floor, Reinforced, with Steel Protective Plates (includes perforated steel)
- 36 Wood Floor, Reinforced

#### Validation Rule for A104

-Floor Material is not applicable to Bulk Hopper type Containers (Equipment Descriptor of UH)

Floor Anchor Builder **B335** Floor Anchor Builder

W Worthington-York

## Cost

#### **Original Cost** A184 The original manufacturer selling price

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Range of Values for A184

Minimum	Maximum
0	999999

#### Validation Rule for A184

-Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.

-Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported.

-Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost

-Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

#### NOTES:

· Original Cost is never altered. It is the cost of the equipment to the original

• For railroad-marked cars, report in US dollars the original ledger value of the original owner For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24

The original cost is used in the settlement of AAR Interchange Rule 107 Office Manual.

For connected unit cars report the total original cost for all units in the set.

Numeric, applicable to all railroad-marked cars Also, applicable to privately marked covered hopper (LO) cars.

• Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

**Ledger Value** A150 The sum of original cost and additions & betterments

Data is Confidential. Value does not carry forward for Single Clone / Multi-

=Mandatory ▲=Used in ETC Generation

Clone

#### Range of Values for A150

Minimum	Maximum
0	999999

#### **Validation Rule for A150**

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

Total A&B	A003
-----------	------

System generated sum of all reported amounts in A&B Amount (A317), in US dollars

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A003

Minimum	Maximum
0	99999999

#### NOTES:

- For railroad-marked cars, report the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not be used to report Ledger Value.
- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.
  - o Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
  - Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.
- For connected unit cars report the total Truck Location A for all units in the

#### Ind for Pos/Neg Total A&B

A128

A code indicating the positive or negative adjustment to the original cost of the equipment

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A128

Negative Positive

#### A&B Pos/Neg Ind

A316

A code indicating the positive or negative adjustment to the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A316

Р N Negative Positive

## Validation Rule for A316

- -When entering an individual Addition & Betterment, you must enter a value in
- -The A&B Indicator is required when Additions & Betterments are reported.
- -The A&B Indicator must not be reported if Additions & Betterments are not reported.

## **A&B Amount**

Δ317

The amount of the individual addition and betterment added to or subtracted from the original cost of the equipment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

#### Range of Values for A317

Minimum	Maximum
1	999999
	="

Validation Rule for A317

-When entering an individual addition & betterment; A&B Date Done (A319), A&B Type (A318), A&B Pos/Neg Ind (A316), and A&B Amount (A317) must be reported

**A&B Date Done** 

A319

#### The date of the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A319

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for A319

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -Addition and Betterment Date Done cannot be earlier than Built Date (BLDT).
- -Additions & Betterments Date Done cannot be later than today's date.

**A&B Type** A318

The type of individual addition and betterment as defined by Rule 107

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A318

CONT Containers (metal, rubber, or combination metal/rubber)

General - Capitalized Additions and Betterments GNRI

Initial load of historical A&B amount as of Umler 4.6 implementation

date

#### Validation Rule for A318

- -For each equipment, only one Individual A&B Type can have a value of
- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.

## Car Management

**Pool Number** 

P001

Unique number used to indicate the grouping of equipment for a particular purpose

Used for Transportation Codes. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add Back.

## **User Routing Instructions**

**TCUR** 

The routing instruction reported by the user

Used for Transportation Codes.

#### Permissible Values for TCUR

- Trailer Service Rule 2 2
- G Contaminated commodity service
- Μ Mark canceled
- 0 Owner requested return
- U Unassigned equipment

#### NOTES:

• For further explanation reference Appendix E.

### **Umler Transportation Code**

TCOD

The type of assigned service, empty routing or restriction of the equipment

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

**Transportation Cond Code** 

**TCCD** 

The AAR or FRA interchange restriction code

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

## NOTES:

• For further explanation reference Appendix E.

Mechanical Restriction TCME

User reported or system generated type of mechanical restriction

Used for Transportation Codes. Affects Rating.

#### **Permissible Values for TCME**

- S Scrap
- X AAR Interchange Restriction

#### NOTES:

• For further explanation reference Appendix D.1

Mech Restriction Reason

The explanation of the Mechanical Restriction (TCME)

## Used for Transportation Codes. Permissible Values for TCMR

- X Restricted Due to Scrap or Early Warning
- Z Restricted Due to Umler Conflict (Not Valid for User Input)

#### NOTES:

- For further explanation reference Appendix D.2.
- The assignment of the Transportation Codes S\_ SX, XA, XZ and YA generate
  the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and
  mileage rate.

## Miscellaneous

#### **Commercial Owner CIF**

B049

**TCMR** 

The Customer Identification File (CIF) number for a commercial owner at a specific location

### **Commercial Lessee CIF**

B048

The Customer Identification File (CIF) number for a commercial lessee at a specific location

#### **Umler Effective Date**

**EFDT** 

The date the rating activity (pre-registration, modification, etc.) is expected to occur

This element is not eligible for Query. Does not Carry Forward.

#### **Validation Rule for EFDT**

-Effective Date cannot be set to more than 13 months in the future.

#### NOTES:

 Effective Date will default to the 1st of the following month that equipment is registered

## Inspection

## Inspection Date Done

DTDN

The date the inspection was completed; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Validation Rule for DTDN

-The inspection date must not be 60 days before the Build Date

## **Inspection Due Date**

INDE

The due date of the next inspection; used for all inspection types reported on equipment

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

### Inspection Performer

PERF

The SCAC that completed the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### **Inspection Reporter**

REPT

The SCAC that reported the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Location/SPLC

SPLC

The SPLC of the inspecting location; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

## **Umler**®

## **Data Specification Manual**

# Status Code Mandatory USCD Identifies the current operational state

Does not Carry Forward.

#### **Permissible Values for USCD**

A ACTIVE I INACTIVE

P PRE-REGISTERED

#### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-Registered.
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID 0001
The equipment stenciled number

#### Validation Rule for 0001

- -Equipment Number must not be larger than 6 digits (i.e., 999999) **NOTES:**
- Equipment ID includes the mark and number stenciled on the equipment.
   Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD99999).
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

Mechanical Designation *Mandatory*Equipment description without physical dimensions

Used for Transportation Codes.

#### Permissible Values for UMMD

Z Chassis/Trailer

Equipment Descriptor Mandatory

Additional information about the type of equipment used in conjunction with the Mechanical Designation to generate the Equipment Type Code (ETC) for Intermodal Flat, Locomotive, Chassis, Container, and Trailer equipment groups

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B341

ZFB Flat Bed Trailer
ZOT Open Top Trailer

ZRV Rail Compatible - Mark V ZV General Service Dry Van Trailer

ZVE Special Equipped (Straight Floor Closed) Trailer

ZVI Insulated Trailer

ZVR Mechanical Refrigerator Trailer

#### Validation Rule for B341

-Equipment Designator does not agree with the TRLR allowable Mechanical Designations

Equipment Type Code UMET

An alpha numeric code that describes the physical attributes of equipment

System Generated Field. This element is not eligible for Input.

## NOTES:

• Please Refer to Appendix I for More information Regarding ETC Generation

Built Date *Mandatory*The date the construction of the equipment is complete

Data is Confidential. Used for Transportation Codes. Value does not carry

forward for Single Clone / Multi-Clone.

#### Range of Values for BLDT

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for BLDT

-For Trailers, Containers and Chassis, the age of the equipment if not rebuilt cannot be in excess of 50 years from today

 -Prior and target equipment's Built Date (BLDT) must match for restenciling

#### NOTES:

- Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

Rebuilt / ILS Date RBDT

## The date the re-construction of the equipment is complete

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

## Range of Values for RBDT

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for RBDT

- -For Trailers, Containers and Chassis, the Built Date cannot be on or before 25 years before the Rebuilt Date
- -For Trailers, Containers and Chassis, the Built Date cannot be on or after the Rebuilt Date

#### NOTES:

- Railroad cars -- applicable only to cars meeting status as provided in both STB Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office Manual
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt
  Date unless car has been approved by the AAR.

Rebuilt Flag RBFL
Identifies the equipment is nearing its end of life cycle

Data is Confidential. System Generated Field. This element is not eligible for

**Permissible Values for RBFL** 

I No Y Yes

Owner *Mandatory*Primary reporting mark of the railroad or private company owning the car

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### NOTES:

 Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.

Lessee LESE

## The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### Validation Rule for LESE

-Umler Owner (UMOW) and Lessee are not allowed to be equal

## NOTES:

 In order to assign privately marked cars to a pool, a railroad reporting mark must be reported.

Equipment Group Mandatory 0002

Identifies the various major car types

Used for Transportation Codes. Affects Rating.

**B201** 

**Maintenance Party** MNPT

The parent reporting mark of the company responsible for the maintenance and repairs of the equipment

Does not Carry Forward.

## **Mark Owner Category**

## The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

#### Permissible Values for B201

- US Private В
- C Canadian Private
- Foreign Private
- Н Canadian Class II
- Canadian Class I 1
- Mexican Class I
- Κ Canadian Class III
- M Mexican Private
- Ν **US Private Steamship**
- 0 Canadian Private Steamship
- Р Mexican Private Steamship
- Foreign Private Steamship Q
- R US Class II Railroad
- U US Class I Railroad
- US Class III Railroad V
- W Mexican Class II Railroad
- Υ Mexican Class III Railroad

#### NOTES:

• This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry.

Prior Equipment ID	PRID
The previous reporting mark and number of the equipment	

Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for PRID

- -Prior and target equipment's Built Date (BLDT) must match
- -The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

#### NOTES:

Prior ID enables equipment records to share the same historical lineage. Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

Last Update Date	B122
Date of the last Umler element change	

System Generated Field. This element is not eligible for Input.

Equipment Add Date	B082
Date the reporting mark and number was added to the Umler system	

System Generated Field. This element is not eligible for Input.

Status Change Reason	USCR
Identifies the reason for the current operational state	

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

### **Permissible Values for USCR**

- Initial Load
- М Movement
- 0 Status Changed Manually

R Restencil

#### NOTES:

- If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

**Status Change Date** USCT

Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

**Licensing State/Province** A154 Licensing State / Province

#### Permissible Values for A154

## **Equipment Identification**

**EINN** 

## Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

## NOTES:

Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections.

**Conflict Status B050** 

Identifies the escalation level of equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B050

Subject to Zero-Rating

- Subject to Restricted in Interchange
- Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Date of Original Conflict** 

B063

**B135** 

**B062** 

The date the equipment was originally placed in the current conflict System Generated Field. This element is not eligible for Input.

**Next Conflict Status** Identifies the next escalation level of an equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B135

- Subject to Zero-Rating 1
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Notice Indicator B137** 

#### Identifies equipment in error in Umler Notice Management

System Generated Field. This element is not eligible for Input.

**Conflict Status Next Date** 

## The date the conflict status will be escalated

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**Rate Indicator** A070

## Indicates the rate type applicable to the unit

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Does not Carry Forward.

## Permissible Values for A070

- Zero-Rated Due to Conflict Errors 0
- Units subject to special lease arrangement 1
- Zero-Rated Scrap (S\_,SX), AAR Overage (XA), FRA Overage (YA), Umler Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].

#### NOTES:

If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.

First Movement Date **USAT** 

The first movement date under the stenciled mark of the equipment

This element is not eligible for Input. Does not Carry Forward.

B083 **Equipment Add Company** 

The reporting mark of the company that added the equipment System Generated Field. This element is not eligible for Input.

**Registration Reason** 

The code indicating the reason this equipment is added

Does not Carry Forward.

**- 280 -**

#### Permissible Values for B174

Α Add-Back N New **Pending Restencil** R Restencil

=Mandatory ▲=Used in ETC Generation = Affects Rating \*=Conditionally Mandatory

June 2025

**B174** 

Restencil Program Ind	B177
Identifies the equipment is under a restencil program	

#### Permissible Values for B177

Yes

**Delete Reason Code** B064

A code that designates the reason the equipment has been deleted

Value does not carry forward for Add Back.

#### Permissible Values for B064

- Restenciled Α
- D Destroyed or wrecked
- L Lease terminated, removed from fleet
- Р Retired unserviceable beyond economic repair
- R Rebuilt
- S Sold Serviceable
- W Over age retired for dismantling
- Υ Error, reporting did not exist
- Ζ

## Weight

#### **Gross Rail Load/Weight**

A266

The maximum permissible weight on rail of the equipment and the load, reported in pounds

#### Range of Values for A266

Minimum	Maximum
4900	98000

#### Validation Rule for A266

-Gross Rail Load must be equal to the Load Limit (LDLT) plus the Tare Weight (A259)

#### NOTES:

Use Table 1 below to determine Gross Rail Load, if Qualification for Increased Gross Rail Load (B344) does not exist.

TABLE 1 -

Journal Size	Load per Axle	Gross Rail Load for 4-
		axle Equipment
B - 4 1/2" x 8"	25,750 lbs.	103,000 lbs.
C - 5" x 9"	35,500 lbs.	142,000 lbs.
D - 5 1/2" x 10"	44,250 lbs.	177,000 lbs.
E - 6" x 11"	55,000 lbs.	220,000 lbs.
F - 6 1/2" x 12"	65,750 lbs.	263,000 lbs.
G - 7" x 12"	78,750 lbs.	315,000 lbs.
K - 6 1/2" x 9"	71,500 lbs.	263,000 lbs.
M - 7" x 9"	78,750 lbs.	315,000 lbs.

Use Table 2 below to determine Gross Rail Load for 4-axle equipment if Qualification for Increased Gross Rail Load (B344) exists.

TABLE 2 -

Qualification for	Journal Size	Gross Rail Load
Increased Gross Rai	l	
Load (B344)		
1	K - 6 1/2" x 9"	286,000 lbs.
1	G - 7" x 12"	286,000 lbs.
1	M - 7" x 9"	286,000 lbs.
2	F - 6 1/2" x 12"	286,000 lbs.
2	K - 6 1/2" x 9"	286,000 lbs.
3	F - 6 1/2" x 12"	268,000 lbs.
3	K - 6 1/2" x 9"	268,000 lbs.

- For multi-unit equipment, report the total gross rail load for the entire set.
- Refer to Field Manual Rule 70 if additional information is required.

A Gross Rail Load less than the listed or calculated values may be entered; however:

- 5. Star Code (A247) must be R or S, and
- 6. Load Limit (LDLT) must also be reduced, ensuring Tare Weight (A259) plus Load Limit (LDLT) equals the reported Gross Rail Load.

For equipment having two or more different journal sizes, see following examples:

Example for Drawbar Connected:

- A 5-unit drawbar connected car has 20 axles.
- The end units (Locations A and B) each have 4 axles with E 6" x 11"
- The intermediate units (Locations C, D, and E) each have 4 axles with F 6 1/2" x 12" journals.

Using TABLE 1, the Gross Rail Load would be:

8 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 440,000 lbs. +12 ea. F-6 1/2" x 12" journal axles X 65,750 lbs. per axle = 789,000 lbs. Gross Rail Load = 1.229,000 lbs.

Example for Articulated Connected:

- A 5-unit articulated intermodal car has 6 trucks (12 axles).
- The end trucks (Locations A and B) each have 2 axles with E 6" x 11"
- The intermediate trucks (Locations C, D, E, and F) each have 2 axles with G - 7" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

4 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 220,000 lbs. + 8 ea. G-7" x 12" journal axles X 78,750 lbs. per axle = 630,000 lbs. Gross Rail Load = 850,000 lbs.

## **Tare Weight**

A259

The equipment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

## Range of Values for A259

Minimum	Maximum
600	33000

#### NOTES:

Do not report an average Tare Weight for car series, except for Pre-Registered cars

When cars are made active, the actual Tare Weight must be recorded

The maximum permissible weight of the commodity that can be loaded into the equipment, reported in pounds

## Range of Values for LDLT

Minimum	Maximum
0	70000

#### **Cubic Feet Capacity** A067 The maximum interior cubic feet capacity of the equipment

#### Range of Values for A067

Minimum	Maximum
1000	4200

#### Validation Rule for A067

-Trailer Cubic Feet Capacity is not applicable to Flat Bed Trailers (Equipment Descriptor - VFB)

Gallonage Capacity	A297
The number of gallons the equipment will hold	

\*=Conditionally Mandatory

Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A297

Minimum	Maximum
4000	12000

Dimension	
Outside Length Mandatory	OSLG
The outside length over pulling faces of couplers in normal position	• 🛦

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in

#### Range of Values for OSLG

Minimum	Maximum
15 ft 7 inches	57 ft 0 inches

#### NOTES:

- For connected unit cars report the maximum coupled length of the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

Outside Extreme Width Mandatory	
The outside extreme width of the equipment	

A186

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A186

Minimum	Maximum
7 ft 3 inches	8 ft 6 inches

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06'

Outside Extreme Height Mandatory	A185
Height from top of rail to extreme projecting height	• 🛦

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A185

Minimum	Maximum
4 ft 3 inches	14 ft 0 inches

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06'

Outside Height Extr Width Mandatory	A187
The highest point at which the extreme width of the equipment occurs	•

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A187

Minimum	Maximum
1 ft 0 inches	14 ft 0 inches

#### Validation Rule for A187

-Outside Height Extreme Width must be less than or equal to Outside Extreme Height

## NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06'

Undercarriage Width	B217
Undercarriage Width	<b>A</b>
Used in ETC Generation	

#### Permissible Values for B217

102 inches 96 96 inches

#### Validation Rule for B217

-Undercarriage Width must be set if Undercarriage Type is set

Inside Length	A135

The inside length of the equipment from end to end inside walls, linings, and permanent bulkheads

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A135

Minimum	Maximum
15 ft 6 inches	55 ft 4 inches

#### **Validation Rule for A135**

- -Inside Length must not be greater than Outside Length
- -Inside Length/Inside Platform Length must be less than or equal to Outside Length (OSLG)
- -Is not applicable to Inside Length/Inside Platform Length for Trailer/Container - Bulk Hopper, Tank or Flat (Mechanical Designation of UH, or UTK)

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the shortest dimension of a unit in the set.

Inside Width	A138
The inside width of the equipment from side walls and linings	

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A138

Minimum	Maximum	
7 ft 0 inches	8 ft 4 inches	

## Validation Rule for A138

- -Inside Width/Inside Platform Width must not exceed Outside Extreme
- -Inside Width/Inside Platform Width is not applicable to Trailer/Container - Tank or Flat (Mechanical Designation of UTK)

Inside	Height	:				A133	
							Ē

The inside height of the equipment from the floor to the top of the side, or to the lowest point of the interior ceiling

Displayed in feet and inches on the Web. Stored in inches.

### Range of Values for A133

Minimum	Maximum		
1 ft 0 inches	11 ft 1 inches		

#### Validation Rule for A133

- -Trailer Inside Height cannot be set for Flat Bed Trailers (Equipment Descriptors ZFB)
- -Inside Height must not exceed Outside Extreme Height (A185)

## NOTES:

• For connected unit cars report the shortest dimension of a unit in the set.

Deck Height Above Ground	B149
Inside Height/Deck Hat	

Displayed in feet and inches on the Web. Stored in inches.

## Range of Values for B149

Minimum	Maximum		
1 ft 0 inches	11 ft 1 inches		

## Validation Rule for B149

-Trailer Platform Deck Height can only be set for Flat Bed Trailers (Equipment Descriptor - VFB)

Height Trailer @ Lift Pts	B107
The measurement in feet and inches at the lift point of a trailer-New	

End Door Type	A081
End Door Type	

#### Permissible Values for A081

- Hinged 2 Overhead/Rollup
- 3 Other

#### Validation Rule for A081

-Trailer End Door Type is not applicable to Flat Bed Trailers (Equipment Descriptor - VFB)

## Umler

## **Data Specification Manual**

End Door Width	A082
The width of the end door opening in inches	

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A082

Minimum	Maximum	
4 ft 0 inches	8 ft 4 inches	

#### Validation Rule for A082

- -End Door Width must not be reported if Trailer/Container End Door Type is not reported
- -End Door Width requires End Door Type of Trailer/Container with other than 0
- -End Door Width is not applicable to Trailer/Container Bulk Hopper, Tank or Flat (Mechanical Designation of UH, UFB, UTK, ZBH, ZTK, or ZFB)

#### NOTES:

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the dimension of the smallest end door width of a unit in the set.

End Door Height	A080
The height of the end door opening in inches	

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A080

Minimum	Maximum
4 ft 0 inches	10 ft 6 inches

#### Validation Rule for A080

- -End Door Height must not be reported if End Door Width is not reported
- -End Door Height must be reported if End Door Width is reported
- -End Door Height must not be reported if Trailer/Container End Door Type is not reported
- -End Door Height must be reported if End Door Type of Trailer/Container
- -End Door Height is not applicable to a Trailer/Container Bulk Hopper, Tank or Flat (Mechanical Designation of UH, UFB, UTK, ZBH, ZTK, or

#### NOTES:

- Round fraction to the lower inch, e.g., 05 1/4" = 05"
- For connected unit cars report the dimension of the smallest end door height of a unit in the set.

**Remote Monitoring Device B176** Indicates the equipment has a device that transmits a signal or records data

Permissible Values for B176

## **Data Specification Manual**

#### Y Yes

#### NOTES:

 Per AAR S-2045, This may be data related to ride quality, geographic location, temperature/condition of the load, load/empty status, etc.

**AEI High Temperature Tag** 

B006

Indicates the equipment is equipped with a high temperature AEI tag

#### Permissible Values for B006

Y High Temperature Tag

**Equipment Builder** 

A035

#### Identifies the original manufacturer of the equipment

#### Permissible Values for A035

HPA HPA Monon Corporation
NACA National Alabama Corporation

UNKN Unknown WABN Wabash National

#### Validation Rule for A035

- -Equipment built or rebuilt on or after July 1, 2010 cannot have a Equipment Builder of Unknown
- -Equipment with a Built Date (BLDT) on or after July 1, 2010 cannot have an Equipment Builder Code of OWNER RAILROAD.
- -Equipment Builder can have a value of MULT only if the equipment has multiple units.

**Builder Lot Code** 

B030

A unique identifier for a group of equipment built by one manufacturer under

the same contract

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

## Validation Rule for B030

 -Equipment built or rebuilt on or after June 28, 2012 must have a value for Builder Lot Code

**Built Country** 

B031

The country where the equipment was constructed

Data is Confidential.

#### Permissible Values for B031

Cost

**Original Cost** A184 The original manufacturer selling price

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

## Range of Values for A184

Minimum	Maximum
0	999999

#### Validation Rule for A184

-Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.

-Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported.

-Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost

-Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

### NOTES:

• Original Cost is never altered. It is the cost of the equipment to the original

• For railroad-marked cars, report in US dollars the original ledger value of the original owner For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24

- The original cost is used in the settlement of AAR Interchange Rule 107 Office
- For connected unit cars report the total original cost for all units in the set.
- Numeric, applicable to all railroad-marked cars Also, applicable to privately marked covered hopper (LO) cars.
- Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

**Ledger Value** A150

=Mandatory ▲=Used in ETC Generation

#### The sum of original cost and additions & betterments

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A150

Minimum	Maximum
0	999999

#### Validation Rule for A150

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

Total A&B	
-----------	--

A003

System generated sum of all reported amounts in A&B Amount (A317), in US

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A003

Minimum	Maximum
0	99999999

#### NOTES:

- For railroad-marked cars, report the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not be used to report Ledger Value.
- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.
  - o Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
  - o Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.
- For connected unit cars report the total Truck Location A for all units in the

## Ind for Pos/Neg Total A&B

A128

A code indicating the positive or negative adjustment to the original cost of the

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

## Permissible Values for A128

Negative

Positive

#### A&B Pos/Neg Ind

A316

A code indicating the positive or negative adjustment to the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

## Permissible Values for A316

N Negative Р Positive

## Validation Rule for A316

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields
- -The A&B Indicator is required when Additions & Betterments are reported.
- -The A&B Indicator must not be reported if Additions & Betterments are not reported.

#### **A&B Amount**

A317

The amount of the individual addition and betterment added to or subtracted from the original cost of the equipment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A317

Minimum	Maximum
1	999999

#### Validation Rule for A317

-When entering an individual addition & betterment; A&B Date Done (A319), A&B Type (A318), A&B Pos/Neg Ind (A316), and A&B Amount (A317) must be reported

#### **A&B Date Done**

A319

### The date of the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A319

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for A319

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -Addition and Betterment Date Done cannot be earlier than Built Date (BLDT).
- -Additions & Betterments Date Done cannot be later than today's date.

#### The type of individual addition and betterment as defined by Rule 107

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A318

**GNRL General - Capitalized Additions and Betterments** 

INIT Initial load of historical A&B amount as of Umler 4.6 implementation date

#### Validation Rule for A318

- -For each equipment, only one Individual A&B Type can have a value of INIT.
- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.

## Car Management

**Pool Number** 

P001

Unique number used to indicate the grouping of equipment for a particular

Used for Transportation Codes. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add Back.

#### **User Routing Instructions**

**TCUR** 

The routing instruction reported by the user

Used for Transportation Codes.

### Permissible Values for TCUR

- Trailer Service Rule 2
- G Contaminated commodity service
- M Mark canceled
- 0 Owner requested return
- U Unassigned equipment

## NOTES:

• For further explanation reference Appendix E.

## **Umler Transportation Code**

TCOD

The type of assigned service, empty routing or restriction of the equipment

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

#### **Transportation Cond Code**

TCCD

The AAR or FRA interchange restriction code

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

• For further explanation reference Appendix E.

Mechanical Restriction

TCME

User reported or system generated type of mechanical restriction

Used for Transportation Codes.

#### **Permissible Values for TCME**

- S Scrap
- X AAR Interchange Restriction

#### NOTES:

• For further explanation reference Appendix D.1

**Mech Restriction Reason** 

TCMR

#### The explanation of the Mechanical Restriction (TCME)

Used for Transportation Codes.

#### **Permissible Values for TCMR**

- X Restricted Due to Scrap or Early Warning
- Z Restricted Due to Umler Conflict (Not Valid for User Input)

#### NOTES:

- For further explanation reference Appendix D.2.
- The assignment of the Transportation Codes S\_, SX, XA, XZ and YA generate the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and mileage rate.

### Miscellaneous

Commercial Owner CIF

R049

The Customer Identification File (CIF) number for a commercial owner at a specific location

#### Commercial Lessee CIF

B048

The Customer Identification File (CIF) number for a commercial lessee at a specific location

#### Umler Effective Date

EFD.

The date the rating activity (pre-registration, modification, etc.) is expected to occur

This element is not eligible for Query. Does not Carry Forward.

#### Validation Rule for EFDT

-Effective Date cannot be set to more than 13 months in the future.

#### NOTES:

 Effective Date will default to the 1st of the following month that equipment is registered

# Inspection

#### **Inspection Date Done**

DTDN

The date the inspection was completed; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Validation Rule for DTDN

-The inspection date must not be 60 days before the Build Date

#### **Inspection Due Date**

INDD

The due date of the next inspection; used for all inspection types reported on equipment

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### **Inspection Performer**

PERF

The SCAC that completed the inspection; used for all inspection types reported

#### on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### **Inspection Reporter**

REPT

The SCAC that reported the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Location/SPLC

SPLC

The SPLC of the inspecting location; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

# General Status Code Mandatory USCD Identifies the current operational state

Does not Carry Forward.

#### **Permissible Values for USCD**

A ACTIVE I INACTIVE

P PRE-REGISTERED

#### NOTES:

- For Restencil and Clone process the initial Status of a car should be Pre-Registered.
- All Add-Back processes should initially set the Status to Pre-Registered
- A Pre-registered car will automatically have its Status changed to Active for the initial change when TRAIN detects three (3) movements on the car
- If the Status changes to Active due to movement and the car was created from a Restencil, the Prior Equipment ID (PRID) or source car will have its status changed to Inactive automatically by Umler

Equipment ID	0001
The equipment stenciled number	

#### Validation Rule for 0001

- -Equipment Number must not be larger than 6 digits (i.e., 999999) **NOTES:**
- Equipment ID includes the mark and number stenciled on the equipment.
   Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD99999).
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

Mechanical Designation Mandatory	UMMD
Equipment description without physical dimensions	•

Used for Transportation Codes.

#### Permissible Values for UMMD

Z Chassis/Trailer

Equipment Descriptor Mandatory	B341
Additional information about the type of equipment used in conju	nction with
the Mechanical Designation to generate the Equipment Type Co	ode (ETC) for
Intermodal Flat Tocomotive Chassis Container and Trailer equ	inment

Value does not carry forward for Equipment Group Change.

#### Permissible Values for B341

groups

ZC Straight Chassis
ZCC Combo Chassis

ZCE Extendible Chassis

ZCG Gooseneck Chassis

ZCT Tri-Purpose Chassis

#### Validation Rule for B341

-Equipment Designator does not agree with the CHSS allowable Mechanical Designations

# Equipment Type Code UMET An alpha numeric code that describes the physical attributes of equipment

System Generated Field. This element is not eligible for Input.

#### NOTES:

• Please Refer to Appendix I for More information Regarding ETC Generation

Built Date Mandatory	BLDT
The date the construction of the equipment is complete	•

Data is Confidential. Used for Transportation Codes. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for BLDT

Minimum	Maximum
1/1/1900	12/31/9999

#### **Validation Rule for BLDT**

 -For Trailers, Containers and Chassis, the age of the equipment if not rebuilt cannot be in excess of 50 years from today
 -Prior and target equipment's Built Date (BLDT) must match for

restenciling

#### NOTES:

- Data is public for railroad marked equipment.
- For connected unit cars report the oldest car in the set.

Reb	uilt	/ ILS Da	ite			RBDT

#### The date the re-construction of the equipment is complete

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for RBDT

Minimum	Maximum
1/1/1900	12/31/9999

#### Validation Rule for RBDT

- -For Trailers, Containers and Chassis, the Built Date cannot be on or before
   25 years before the Rebuilt Date
- -For Trailers, Containers and Chassis, the Built Date cannot be on or after the Rebuilt Date

#### NOTES:

- Railroad cars -- applicable only to cars meeting status as provided in both STB Accounting Rules, and the AAR Mechanical Interchange Rule 88, Office
- Private cars -- applicable to all cars meeting AAR Mechanical Interchange Rule 88, Section C, Office Manual and Sections A and B of the Field Manual.
- For connected unit cars report the oldest car in the set. Do not report Rebuilt
  Date unless car has been approved by the AAR.

Rebuilt Flag	RBFL
Identifies the equipment is nearing its end of life cycle	

Data is Confidential. System Generated Field. This element is not eligible for Input. Does not Carry Forward.

#### **Permissible Values for RBFL**

N No Y Yes

Owner *Mandatory*Primary reporting mark of the railroad or private company owning the car

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil /

#### NOTES:

 Report the primary reporting mark of the railroad or private company owning the car. When car's lease or lien is held by a bank, trust holder, capital lease company, etc. not having an assigned mark, report the primary reporting mark affiliated with the stenciled reporting mark.

Equipment Group Mandatory	0002
Identifies the various major car types	•

Used for Transportation Codes. Affects Rating.

Lessee LESE
The reporting mark of the company leasing the equipment

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil.

#### Validation Rule for LESE

-Umler Owner (UMOW) and Lessee are not allowed to be equal

#### NOTES:

 In order to assign privately marked cars to a pool, a railroad reporting mark must be reported.

●=Mandatory ▲=Used in ETC Generation = Affects Rating -291 - \*=Conditionally Mandatory June 2025

A154

# **Umler**<sup>®</sup>

#### **Data Specification Manual**

# Maintenance Party MNPT

The parent reporting mark of the company responsible for the maintenance and repairs of the equipment

Does not Carry Forward.

Mark Owner Category B201

#### The company that owns the stenciled mark on the car

System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

#### Permissible Values for B201

- B US Private
- C. Canadian Private
- F Foreign Private
- H Canadian Class II
- I Canadian Class I
- J Mexican Class I
- K Canadian Class III
- M Mexican Private
- N US Private Steamship
- O Canadian Private Steamship
- P Mexican Private Steamship
- Q Foreign Private Steamship
- R US Class II Railroad
- U US Class I Railroad
- V US Class III Railroad
- W Mexican Class II Railroad
- Y Mexican Class III Railroad

#### NOTES:

 This value is stored in the Umler Database for informational purposes and is retrieved from the Roadmark Registry.

Prior Equipment ID PRID

The previous reporting mark and number of the equipment

Value does not carry forward for Single Clone / Multi-Clone.

#### **Validation Rule for PRID**

- -Prior and target equipment's Built Date (BLDT) must match
- -The Prior Equipment ID (0001) must belong to the same or comparable Equipment Group (0002) as the current car initial and number

#### NOTES:

Prior ID enables equipment records to share the same historical lineage.
 Equipment Identification Number (EIN) is a generated id that enables these equipment records to share inspections and transaction history.

Last Update Date B122

Date of the last Umler element change

System Generated Field. This element is not eligible for Input.

Equipment Add Date B082

Date the reporting mark and number was added to the Umler system

System Generated Field. This element is not eligible for Input.

Status Change Reason

USCR

Identifies the reason for the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for USCR

- I Initial Load
- M Movement
- O Status Changed Manually
- R Restencil

#### NOTES:

- · If movement is detected on equipment, status is changed to Active.
- If an equipment record is changed to Active, any prior equipment record is placed in Inactive status.

Status Change Date USCT

Identifies the effective date of the current operational state

System Generated Field. This element is not eligible for Input. Does not Carry Forward.

#### **Equipment Identification**

EINN

### Unique equipment identifier regardless of stenciled mark

System Generated Field. This element is not eligible for Input.

#### NOTES:

Specify the Prior ID (PRID) on equipment records to ensure the historical lineage is preserved. Equipment with the same EIN share history and inspections.

**Conflict Status** B050

Identifies the escalation level of equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B050

- Subject to Zero-Rating
- 2 Subject to Restricted in Interchange

Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Date of Original Conflict** 

B063

The date the equipment was originally placed in the current conflict

System Generated Field. This element is not eligible for Input.

**Next Conflict Status** 

B135

Identifies the next escalation level of an equipment in active conflict

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

#### Permissible Values for B135

- Subject to Zero-Rating
- 2 Subject to Restricted in Interchange
- 3 Subject to Deletion

#### NOTES:

- Subject to Zero-Rating, goes into effect 30 days after Conflict Status occurs
- Subject to Restricted in Interchange, goes into effect 90 days after Conflict Status occurs
- · Subject to Deletion, goes into effect 365 days after Conflict Status occurs

**Notice Indicator** 

**B137** 

#### Identifies equipment in error in Umler Notice Management

System Generated Field. This element is not eligible for Input.

**Conflict Status Next Date** 

The date the conflict status will be escalated

Indicates the rate type applicable to the unit

**B062** 

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**Rate Indicator** 

A070

System Generated Field. Used for Transportation Codes. Affects Rating. This element is not eligible for Input. Does not Carry Forward.

#### Permissible Values for A070

- Zero-Rated Due to Conflict Errors 0
- Units subject to special lease arrangement 1
- Zero-Rated Scrap (S\_,SX), AAR Overage (XA), FRA Overage (YA), Umler Conflict - CHR 1/Tarriff 6007 (XZ). Zero-Rated Private Owner Election to Zero Rate [See Private Zero Rate (B150)].

#### NOTES:

• If unit is zero-rated, correction of conflicts will reinstate the appropriate rate indicator code.

**First Movement Date** 

**USAT** 

The first movement date under the stenciled mark of the equipment

This element is not eligible for Input. Does not Carry Forward.

**Equipment Add Company** 

B083

The reporting mark of the company that added the equipment System Generated Field. This element is not eligible for Input.

**Registration Reason** 

R174

The code indicating the reason this equipment is added

Does not Carry Forward.

Permissible Values for B174

Add-Back New Р Pending Restencil R Restencil

**- 293 -**

Restencil Program Ind	B177
Identifies the equipment is under a restencil program	

#### Permissible Values for B177

Yes

B064 **Delete Reason Code** 

A code that designates the reason the equipment has been deleted

Value does not carry forward for Add Back.

#### Permissible Values for B064

- Α Restenciled
- D Destroyed or wrecked
- Lease terminated, removed from fleet L
- Р Retired unserviceable beyond economic repair
- R Rebuilt
- S Sold Serviceable
- W Over age retired for dismantling
- Error, reporting did not exist Υ
- Ζ Other

#### Weight

#### Gross Rail Load/Weight

A266

The maximum permissible weight on rail of the equipment and the load, reported in pounds

#### Range of Values for A266

Minimum	Maximum
4300	105500

#### Validation Rule for A266

-Gross Rail Load must be equal to the Load Limit (LDLT) plus the Tare Weight (A259)

#### NOTES:

- Gross Rail Load must be equal to the Load Limit (LDLT) plus the Tare Weight (A259)
- · For connected unit cars report the total gross rail load of the entire set

Use Table 1 below to determine Gross Rail Load, if Qualification for Increased Gross Rail Load (B344) does not exist.

TABLE 1 -

Journal Size	Load per Axle	Gross Rail Load for 4-
		axle Equipment
B - 4 1/2" x 8"	25,750 lbs.	103,000 lbs.
C - 5" x 9"	35,500 lbs.	142,000 lbs.
D - 5 1/2" x 10"	44,250 lbs.	177,000 lbs.
E - 6" x 11"	55,000 lbs.	220,000 lbs.
F - 6 1/2" x 12"	65,750 lbs.	263,000 lbs.
G - 7" x 12"	78,750 lbs.	315,000 lbs.
K - 6 1/2" x 9"	71,500 lbs.	263,000 lbs.
M - 7" x 9"	78,750 lbs.	315,000 lbs.

Use Table 2 below to determine Gross Rail Load for 4-axle equipment if Qualification for Increased Gross Rail Load (B344) exists.

TABLE 2 -

Qualification for Increased Gross Rail Load (B344)	Journal Size	Gross Rail Load
1	K - 6 1/2" x 9"	286,000 lbs.
1	G - 7" x 12"	286,000 lbs.
1	M - 7" x 9"	286,000 lbs.
2	F - 6 1/2" x 12"	286,000 lbs.
2	K - 6 1/2" x 9"	286,000 lbs.
3	F - 6 1/2" x 12"	268,000 lbs.
3	K - 6 1/2" x 9"	268,000 lbs.

A Gross Rail Load less than the listed or calculated values may be entered; however:

- 7. Star Code (A247) must be R or S, and
- 8. Load Limit (LDLT) must also be reduced, ensuring Tare Weight (A259) plus Load Limit (LDLT) equals the reported Gross Rail Load.

For equipment having two or more different journal sizes, see following examples:

Example for Drawbar Connected:

- · A 3-unit drawbar connected car has 12 axles.
- The end units (Locations A and B) each have 4 axles with E 6" x 11"
- The intermediate unit (Locations C) has 4 axles with F 6 1/2" x 12" journals

Using TABLE 1, the Gross Rail Load would be:

8 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 440,000 lbs. + 4 ea. F-6 1/2" x 12" journal axles X 65,750 lbs. per axle = 263,000 lbs. Gross Rail Load = 703,000 lbs.

Example for IFLT & VFLT:

- A 5-unit articulated intermodal car has 6 trucks (12 axles).
- The end trucks (Locations A and B) each have 2 axles with E 6" x 11"
- The intermediate trucks (Locations C, D, E, and F) each have 2 axles with G - 7" x 12" journals.

Using TABLE 1, the Gross Rail Load would be:

4 ea. E-6" x 11" journal axles X 55,000 lbs. per axle = 220,000 lbs. + 8 ea. G-7" x 12" journal axles X 78,750 lbs. per axle = 630,000 lbs. Gross Rail Load = 850,000 lbs.

#### **Tare Weight**

A259

The equipment weight on rail when empty, sometimes referred to as Light Weight, reported in pounds

#### Range of Values for A259

Minimum	Maximum
3500	33000

#### NOTES:

Do not report an average Tare Weight for car series, except for Pre-Registered

• When cars are made active, the actual Tare Weight must be recorded

**Load Limit** 

The maximum permissible weight of the commodity that can be loaded into the equipment, reported in pounds

#### Range of Values for LDLT

Minimum	Maximum
0	91000

### Dimension

OSLG **Outside Length Mandatory** The outside length over pulling faces of couplers in normal position

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in

#### Range of Values for OSLG

Minimum	Maximum
15 ft 7 inches	57 ft 0 inches

#### Validation Rule for OSLG

-For CHSS Equipment Descriptor of ZC the Outside Length must be greater than 40 feet

# **Umler**<sup>6</sup>

#### **Data Specification Manual**

#### NOTES:

- For connected unit cars report the maximum coupled length of the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

**Outside Extreme Width Mandatory** A186 The outside extreme width of the equipment

Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A186

Minimum Maximum	
7 ft 3 inches	8 ft 6 inches

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

Outside Extreme Height Mandatory	A185
Height from top of rail to extreme projecting height	•
1: FT0.0 5: 1 1: f 1: 1 1 1	6. 1.

Used in ETC Generation. Displayed in feet and inches on the Web. Stored in inches.

#### Range of Values for A185

Minimum	Maximum
2 ft 10 inches	4 ft 9 inches

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

Outside Height Extr Width	A187
The highest point at which the extreme width of the equipment occurs	
Displayed in feet and inches on the Web. Stored in inches.	
Range of Values for A187	

#### Minimum Maximum

2 ft 10 inches 4 ft 9 inches Validation Rule for A187

-Outside Height Extreme Width must be less than or equal to Outside Extreme Height

#### NOTES:

- For connected unit cars report the dimension of the largest unit in the set.
- Round fraction to the higher inch, e.g., 05 1/4" = 06"

B217
<b>A</b>

Used in ETC Generation.

#### Permissible Values for B217

102 102 inches 96 96 inches

#### Validation Rule for B217

-Undercarriage Width must be set if Undercarriage Type is set

Specification						
Unde	ercarriage Type					B216
Unde	rcarriage Type					
Permissible Values for B216						
F	Fix Forward	R	Fixed Rear	S	Sliding	

Fix Forward Fixed Rear

### Validation Rule for B216

-Undercarriage Type must be set if Undercarriage Width is set

Extendable CHSS Leng Rnge	B307
Extendable Chassis Length Range	<b>A</b>

Used in FTC Generation.

#### **Permissible Values for B307**

- 40' to 45'
- 40' to 53' В
- 45' to 53' C
- 48' to 53' (new ETC Impact Make Effective 072010)

53' to 57' (new - ETC Impact Make Effective 072010)

**Chassis Loading Combo B404** Chassis loading combinations, used in ETC Generation for Z1

Used in ETC Generation.

#### Permissible Values for B404

- 20ft/24ft Chassis Combination
- 20ft/40ft Chassis Combination

**King Pin Setting** A149 King Pin Setting

#### Permissible Values for A149

- 18 18 Inches

Validation Rule for A035

-Equipment built or rebuilt on or after July 1, 2010 cannot have a Equipment Builder of Unknown

-Equipment with a Built Date (BLDT) on or after July 1, 2010 cannot have an Equipment Builder Code of OWNER RAILROAD.

-Equipment Builder can have a value of MULT only if the equipment has multiple units.

**Builder Lot Code** B030

A unique identifier for a group of equipment built by one manufacturer under the same contract

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Validation Rule for B030

-Equipment built or rebuilt on or after June 28, 2012 must have a value for **Builder Lot Code** 

**Built Country** B031 The country where the equipment was constructed

Data is Confidential.

#### Permissible Values for B031

CA Canada MX Mexico

US **United States** 

**Rebuilt Country** B170 The country where the equipment was re-constructed

#### Permissible Values for B170

CA Canada MX Mexico

US **United States** 

### **Feature**

**Vertical CHSS Storage** B340

**Equipped For Vertical Chassis Storage** 

#### Permissible Values for B340

Yes

2051	
Original Cost	A184
The original manufacturer selling price	*

Data is Confidential. Value does not carry forward for Single Clone / Multi-

# Range of Values for A184

Minimum Maximum 999999

#### Validation Rule for A184

-Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.

-Original Cost must be equal to the Ledger Value if Additions & Betterments Indicator is not reported.

-Railroad marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost

-Private marked freight cars except MISC, LOCO, TRLR, CONT, CHSS, STWH, EOTD, and PSGR are required to have an Original Cost if Built Date (BLDT) is on or after January 1, 2015

#### NOTES:

- Original Cost is never altered. It is the cost of the equipment to the original
- For railroad-marked cars, report in US dollars the original ledger value of the original owner For cars rebuilt, report the cost prescribed in MR Interchange Rule 88 and Circular Letter OT-24
- The original cost is used in the settlement of AAR Interchange Rule 107 Office Manual.
- For connected unit cars report the total original cost for all units in the set.
- Numeric, applicable to all railroad-marked cars Also, applicable to privately marked covered hopper (LO) cars.

A317

#### **Data Specification Manual**

• Raise all cents to the next dollar, e.g. \$5,501.02 = 0005502

**Ledger Value** Δ150

#### The sum of original cost and additions & betterments

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Range of Values for A150

Minimum	Maximum
0	999999

#### Validation Rule for A150

- -Original Cost must be equal to the Ledger Value if there are no Additions & Betterments.
- -Ledger Value must equal the Original Cost (A184) plus the additions & betterments, if Total A&B (A003) has been reported. Otherwise Ledger Value should equal Original Cost (A184).

Total A&B A003

System generated sum of all reported amounts in A&B Amount (A317), in US

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Range of Values for A003

Minimum	Maximum	
0	99999999	

#### NOTES:

- For railroad-marked cars, report the sum of all additions and betterments applied to the car. This value is for record keeping purposes only and will not be used to report Ledger Value.
- For private Cars report the additions and betterments as qualified under AAR interchange Rule 107 for determination of settlement value.
- For privately marked covered hopper (LO) cars, report (if not in original cost) the cost of original into-service freight, capitalized linings, capitalized additions and betterments as authorized by Freight Tariff 6007-series. This field is used to determine Adjusted Value for mileage rate calculations.
  - o Additions are costs of all new components applied subsequent to the date the car was built or rebuilt and carried in the capital investment account.
  - Betterments are costs of all improvements of components of existing equipment through the substitution of superior parts for inferior parts subsequent to the date the car was built of rebuilt.
- For connected unit cars report the total Truck Location A for all units in the set

#### Ind for Pos/Neg Total A&B

Δ128

A code indicating the positive or negative adjustment to the original cost of the

Data is Confidential. System Generated Field. This element is not eligible for Input. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A128

Negative

Positive

A&B Pos/Neg Ind

A code indicating the positive or negative adjustment to the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone.

#### Permissible Values for A316

Negative Positive

#### Validation Rule for A316

- -When entering an individual Addition & Betterment, you must enter a value in
- -The A&B Indicator is required when Additions & Betterments are reported.
- -The A&B Indicator must not be reported if Additions & Betterments are not reported.

**A&B Amount** 

The amount of the individual addition and betterment added to or subtracted from the original cost of the equipment

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Range of Values for A317

Minimum	Maximum
1	999999

#### Validation Rule for A317

-When entering an individual addition & betterment; A&B Date Done (A319), A&B Type (A318), A&B Pos/Neg Ind (A316), and A&B Amount (A317) must be reported

**A&B Date Done** A319

#### The date of the individual addition and betterment

Data is Confidential. Value does not carry forward for Single Clone / Multi-

#### Range of Values for A319

Minimum	Maximum		
1/1/1900	12/31/9999		

#### Validation Rule for A319

- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.
- -Addition and Betterment Date Done cannot be earlier than Built Date
- -Additions & Betterments Date Done cannot be later than today's date.

A&B Type

The type of individual addition and betterment as defined by Rule 107

Data is Confidential. Value does not carry forward for Single Clone / Multi-Clone

#### Permissible Values for A318

GNRI General - Capitalized Additions and Betterments

Initial load of historical A&B amount as of Umler 4.6 implementation INIT

date

#### Validation Rule for A318

- -For each equipment, only one Individual A&B Type can have a value of
- -When entering an individual Addition & Betterment, you must enter a value in all 4 fields.

# Car Management

**Pool Number** 

Unique number used to indicate the grouping of equipment for a particular purpose

Used for Transportation Codes. This element is not eligible for Input. Value does not carry forward for Equipment Group Change / Add Back.

**User Routing Instructions** The routing instruction reported by the user **TCUR** 

P001

#### Used for Transportation Codes.

### Permissible Values for TCUR

- Trailer Service Rule 2 2
- G Contaminated commodity service
- Μ Mark canceled
- 0 Owner requested return
- U Unassigned equipment

#### NOTES:

For further explanation reference Appendix E.

**Umler Transportation Code** 

TCOD

The type of assigned service, empty routing or restriction of the equipment

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

▲=Used in ETC Generation

#### NOTES:

• For further explanation reference Appendix E.

Transportation Cond Code

The AAR or FRA interchange restriction code

System Generated Field. Used for Transportation Codes. This element is not eligible for Input.

#### NOTES:

· For further explanation reference Appendix E.

Mechanical Restriction

TCME

**TCCD** 

User reported or system generated type of mechanical restriction

Used for Transportation Codes.

#### **Permissible Values for TCME**

- S Scrap
- X AAR Interchange Restriction

#### NOTES:

• For further explanation reference Appendix D.1

**Mech Restriction Reason** 

**TCMR** 

The explanation of the Mechanical Restriction (TCME)

Used for Transportation Codes.

#### **Permissible Values for TCMR**

- X Restricted Due to Scrap or Early Warning
- Z Restricted Due to Umler Conflict (Not Valid for User Input)

#### NOTES:

- For further explanation reference Appendix D.2.
- The assignment of the Transportation Codes S\_, SX, XA, XZ and YA generate
  the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and
  mileage rate.

### Miscellaneous

Commercial Owner CIF

B049

The Customer Identification File (CIF) number for a commercial owner at a specific location

**Commercial Lessee CIF** 

B048

The Customer Identification File (CIF) number for a commercial lessee at a specific location

**Umler Effective Date** 

EFD<sup>1</sup>

The date the rating activity (pre-registration, modification, etc.) is expected to occur

This element is not eligible for Query. Does not Carry Forward.

#### Validation Rule for EFDT

-Effective Date cannot be set to more than 13 months in the future.

#### NOTES:

 Effective Date will default to the 1st of the following month that equipment is registered

#### Inspection

#### **Inspection Date Done**

DTDN

The date the inspection was completed; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

#### Validation Rule for DTDN

-The inspection date must not be 60 days before the Build Date

**Inspection Due Date** 

ממואו

The due date of the next inspection; used for all inspection types reported on

#### equipment

System Generated Field. This element is not eligible for Input. Value does not carry forward for Add Back.

**Inspection Performer** 

PFRF

The SCAC that completed the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

Inspection Reporter

REPT

The SCAC that reported the inspection; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

Location/SPLC

SPLC

The SPLC of the inspecting location; used for all inspection types reported on equipment

Value does not carry forward for Single Clone / Multi-Clone / Add Back.

# General

**Equipment ID** 0001

#### The equipment stenciled number

Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

#### Validation Rule for 0001

-Equipment Number must not be larger than 6 digits (i.e., 999999)

#### NOTES:

- Equipment ID includes the mark and number stenciled on the equipment. Marks can be up to 4 characters and number up to 6 digits (i.e., ABCD999999).
- Up to 500 cars can be added or updated in a transaction.
- When adding an equipment record, ensure that Prior Equipment ID (PRID) is reported, unless the equipment is new.

CSEG Field Q **GRFO** 

#### Company Specific Equipment Group Field Q

This element is not eligible for Input, Output or Query. Value does not carry forward for Single Clone / Multi-Clone / Single Restencil / Multi-Restencil / Equipment Group Change / Add Back.

**Appendices Data Specification Manual** 

#### **Appendix A: Business Rules**

The Pool Assignment/Unassignment and Equipment Management Codes Business Rules reflect the compilation of business rules based on the following criteria.

- Documented business rules
- Knowledge of business practices (undocumented business rules)
- Business knowledge of current application functionality

It is possible that the business rules in the existing application code differ from the business rules stated herein. Rules codified in existing applications cannot be assumed to override those rules stated herein or vice-versa. If discrepancies are identified when reviewing the existing code, each discrepancy must be brought to the attention of the business team for resolution.

The current system provides two one-position codes – the Transportation Code (TC) and the Transportation Condition Code (TCC) – for application to its car management systems.

In order to simplify the codification structure and industry processing, the Transportation Code and the Transportation Code have been defined as five distinct data elements called Equipment Management Codes (EMC) consisting of:

- User Reported Equipment Management Code
- System Generated Equipment Management Code
- Pool Control Equipment Management Code
- Mechanical Restriction Equipment Management Code
- Mechanical Restriction Reason Equipment Management Code

When one of these data elements is individually referenced, they will be identified as:

- User Reported (UR)
- System Generated (SG)
- Pool Control (PC)
- Mechanical Restriction (MR)
- Mechanical Restriction Reason (MRR)

The Mechanical Restriction (MR) and Mechanical Restriction Reason (MRR) are referenced in this document as Mechanical Codes. Note:

The current system codes (TC and TCC) co-exist with the new Equipment Management Codes in Umler. Existing Event Repository and legacy TRAIN II messages will continue to accept submissions of the TC/TCC codes. When these codes are submitted through the legacy systems, the Umler system will generate the appropriate Umler Equipment Management Codes based on the rules outlined herein. For direct users of Umler, the TC/TCC codes are output-only fields that are generated by Equipment Management Codes based on the rules outlined in this document.

This document defines the Umler processing associated with equipment management as it relates to the use of the Equipment Management codes versus the legacy TC/TCC codes. For example, the Event Repository system may generate a TC/TCC which is processed by the Umler system resulting in the generation of the appropriate Equipment Management Codes. Only the resulting EMC codes are discussed. The conversion of TC/TCC to Equipment Management Codes can be found in E.5 Equipment Management Codes /Umler Transportation Codes. Also refer to Section 4. Equipment Management Codes for more details regarding the usage and values associated with these new Umler data elements.

In this document "Owner" pertains to the owner of the Mark that is stenciled on the side of the car, not the data element that is defined as the "Equipment Owner" in Umler. The stenciled mark owner is defined in the IRF Mark File.

#### **A.1 Pool Assignment/Reassignment/Unassignment Requirements**

= Affects Rating

#### A.1.1 **Definition of a Pool**

The AAR Industry pools are a collection of equipment grouped for a specific purpose and identified by a unique 7-digit (alphanumeric) pool identifier. Pools may be established for several reasons such as cited below.

- To handle the needs of a specific railroad or a railroad's customers (these pools are identified by a 3-digit prefix using the railroad's Accounting/Rule260 Code).
- To handle multiple railroads operating jointly to service one customer or service type (these pools are identified by a 3-digit prefix of
- To handle rail industry needs through National Pools established by the AAR (these pools are identified by a 3-digit prefix of 999) and managed by the stenciled mark owner or a rail industry assigned manager; i.e., Reload National Pools, Box Car National Pools.

#### A.1.2 Creation of Pool Header

Before equipment is assigned to a pool, a pool header is established. The pool header identifies the pool Identifier, the type of pool (commodity, agent, shipper, contaminated, or national), a descriptive name for the pool, pool location information, and the pool operator(s) if applicable. After a Pool Header is established, equipment may be assigned (added) to the pool. The business rules for the creation and management of a Pool Header can be found in Railinc's Pool Header Business Rules document.

#### A.1.3 Assignment of Unassigned Equipment to a Pool

Pool assignment is defined as the assignment (addition) of equipment to a pool that was not previously in a pool. In this respect, equipment assignment pertains to the addition of a 7-digit Pool Identifier that is not equal to zeros ('0000000'). Equipment unassignment pertains to the removal of the equipment from a pool by the addition of a 7-digit Pool Identifier with a value of zeros ('0000000'). There are very strict rules associated with pool assignments which are imbedded into the Umler application. These rules must be met in order for equipment to be successfully assigned to a pool.

The Pool Type Code in the Pool Header is one of the key elements used to determine whether equipment can be assigned to the pool. The Pool Type Code is used to identify the Mechanical Designations (or Equipment Types) that can be assigned to a pool based on the Car Service Directives applicable to the Pool Type. The relationship between the Car Directives and Orders, the Pool Type Code and the Mechanical Designations and Equipment Types is defined in B.1 Mechanical Designations Applicable to Car Directives and Orders.

In addition to the rules associated with the relationship between the Pool Type and the Mechanical Designations (Equipment Types), there are rules associated with the Pool Category (railroad pool, joint pool or national pool), the Submitter Authorization (refer to C.2 Pool Assignment and Unassignment Security Rules), Rule 260 Validation, Railroad Control Status, and existing Equipment Management Codes Status.

These rules are summarized in Appendix C: Pool Assignment Rules and are based on the following pool categories.

- Railroad Pools
- Joint Pools
- **National Pools**
- National Pools Managed by TTX

If the equipment passes the applicable assignment rules, the equipment is assigned to the pool and assigned a Pool Control Code based on the Pool Type of the existing Pool Header. Refer to B.2 Pool Type and Equipment Management Code (EMC) Relationship and E.1 EMC Application for Pool.

Equipment, which is defined as being overage according to Rules 88 and 90, is restricted in interchange service, and therefore will be assigned a Mechanical Restriction Code of 'X' and a Mechanical Restriction Reason Code of 'A' automatically by the system. If this equipment is assigned to a pool, this equipment will also carry the applicable Pool Control Code. Refer to Section A.1.5.4.2 for more details on this processing. Also refer to Appendix F: Overage Processing for XA or YA for Freight Equipment.

Refer to B.2 Pool Type and Equipment Management Code (EMC) Relationship which identifies the Equipment Management Code assigned to equipment based on the Pool Type of the Pool Header and identifies those pool types which may have Umler Mechanical Codes of XA (Mechanical Restriction Code of X and Mechanical Restriction Reason Code of A).

#### A.1.4 Reassignment of Equipment to Another Pool

The reassignment of equipment is defined as moving equipment from one pool to another pool, or in the Umler system, changing the Pool Identifier data element. The Pool Assignment Rules, defined in Appendix B: and Appendix C:, are used in qualifying the equipment for reassignment to the new pool. In addition, authority to remove (unassign) the equipment from its existing pool, as defined in <u>C.2</u>, is added to the equation.

Below are a few additional rules for reassignment From/To Railroad/Joint pools.

- If the Pool Operator 1 or designated reporter/agent of the From Pool is the Pool Operator 1 or designated reporter/agent of the To Pool, then the equipment can be re-assigned.
- If the Pool Operator 1 or designated reporter/agent of the To Pool is the stenciled mark owner in the From Pool, the equipment can be re-assigned.
- The Railinc Administrator can re-assign equipment.

Re-assignment from a Railroad/Joint/National pool to a National pool can only be done by the stenciled mark owner, the Railinc Administrator, or Railinc assigned administrator for authorized National pools (Refer to C.2 Pool Assignment and Unassignment Security Rules).

For reassignment from a National pool to a Railroad/Joint pool, the stenciled mark owner must be the Pool Operator 1 of the 'To Pool' or the designated reporter/agent of the 'To Pool'.

If the equipment is being reassigned to the same pool by the Pool Operator 1 or the designated reporter/agent, the submitter will receive an error identifying that the equipment is already assigned to the pool. If the Pool Operator identifies that their database is not in agreement with Railinc's database, a refresh request can be submitted which will generate output to the submitter on the current status of the equipment.

### A.1.5 Unassignment of Equipment from a Pool

Pool unassignment is defined as the removal of equipment from a pool. Equipment may be unassigned by providing a Pool Identifier of zeros ('0000000').

Equipment assigned to a pool, can be unassigned (removed) from the pool by a pool operator or a designated reporter/agent of the pool operator. For railroad stenciled equipment, equipment can also be unassigned by the stenciled mark owner or a designated reporter/agent of the stenciled mark owner. For railroad or private stenciled equipment with a railroad lessee, the equipment can also be unassigned by the Lessee or a designated reporter/agent of the Lessee. When equipment is unassigned (removed) from a pool, the Pool Identifier is set to zeros ('0000000') and the associated Pool Control Code is set to blank.

For private stenciled equipment, the equipment owner cannot unassign (remove) the equipment from a pool by setting the Pool Identifier to zeros; however, they can remove the equipment from a pool by removing or changing the railroad Lessee. Refer to Section A.1.5.3.2.

The Pool Assignment and Unassignment Authorization Rules for the various pool categories are defined in <u>C.2 Pool Assignment and Unassignment Security Rules</u>.

#### A.1.5.1 Unassignment of Covered Hoppers from a Pool

When a railroad stenciled Covered Hopper (Mechanical Designation of 'LO' defined under Car Service Directive '435'), or a private Covered Hopper with a railroad Lessee is removed from a pool, the Pool Identifier is zeroed '0000000' and the Umler Pool Control Code is set to 'W'. Refer to <u>E.2</u> <u>EMC Application for Pool Unassignments</u>.

#### A.1.5.2 Unassignment from Contaminated Pools

Although equipment may be unassigned (removed) from railroad contaminated pools (Umler Pool Control = G) by the stenciled mark owner or the owner's designated reporter/agent or the Pool Operator or the Pool Operator's designated reporter/agent, the contaminated G status is retained. In this case, the Pool Identifier is set to zeros ('0000000'), the Umler Pool Control Code is set to blank, and the Umler User Reported Code is set to 'G'.

For the stenciled mark owner to remove the Umler User Reported 'G' (non-pool G), a second transaction must be created to remove the G from the Umler User Reported Code. Although this requires double entry for the owner to remove the equipment from a contaminated status, it assures that the equipment will not be used in non-contaminated service without the owner specifically taking the necessary steps to remove the Umler User Reported 'G' Code.

#### A.1.5.3 Unassignment Due to Change in Equipment Status

Equipment may be removed from a pool due to a change in any of the Umler information which disqualifies the equipment for pool assignment, such as a change in the Umler Equipment Type Code, a change in the Umler Built or Rebuilt Year if it impacts its age, a change in the Umler Lessee, a change to a non-assignable Equipment Management Code, etc. Refer to Sections <u>A.1.5.3.1</u> thru <u>A.1.5.3.2</u> and <u>A.1.5.4.1</u> thru <u>A.1.5.4.6</u> for the various conditions that could cause a unit to be unassigned automatically by the Umler system due to Umler data elements changes.

#### A.1.5.3.1 Changes in Mechanical Designation

If the Mechanical Designation (related to Equipment Type Code) changes on the equipment such that the Mechanical Designation no longer qualifies for pool assignment, then the equipment is removed from the pool and the Umler Pool Control Code is set to blank. Refer to <u>B.1 Mechanical Designations Applicable to Car Directives and Orders and E.2 EMC Application for Pool Unassignments.</u>

#### A.1.5.3.2 Removal of a Railroad Lessee on Private Equipment

On private stenciled equipment, if the railroad Lessee is removed or changed, the equipment no longer qualifies for pool assignment. If the equipment is in a pool, the equipment is removed from the pool and the Pool Control Code is set to blank. This rule does not apply to railroad stenciled equipment if the Lessee is removed or changed. Also, this rule does not apply to private equipment with a private lessee since this equipment cannot be assigned to pools. Refer to <a href="Appendix C: Pool Assignment Rules">Appendix C: Pool Assignment Rules</a>.

#### A.1.5.4 Assignment of Mechanical Restriction Code to S, X or Y

The assignment of the Mechanical Restriction Codes of S, X, or Y to equipment restricts the use of that equipment in interchange service. If the equipment is in a pool (excluding XA, refer to Section 1.5.4.2 for more details), the equipment is removed from the pool and the Pool Control Code

**- 308 -**

is set to blank. In addition, since the equipment no longer qualifies to receive Car Hire/Mileage rates, the Rate Indicator is changed to the applicable Rate Indicator and applicable rate fields are zeroed. Refer to Appendix D: Section D.1 Codes S, X, Y and Rate Indicator Changes.

#### A.1.5.4.1 User Reported Mechanical Restriction Codes of S, X, or Y

If the Mechanical Restriction Code is changed by the stenciled mark owner to a "restricted in interchange" code or identified as Scrap, then the equipment no longer qualifies for pool assignment. If the equipment is in a pool, the equipment is removed from the pool and the Pool Control Code is set to blank. In addition, when equipment is assigned an S, X, or Y Mechanical Restriction Code, the equipment no longer qualifies to receive Car Hire/Mileage rates, so the Rate Indicator is changed to the applicable Rate Indicator and applicable rate fields are zeroed. Refer to Appendix D: Section D.1 Codes S, X, Y and Rate Indicator Changes.

For the list of User Reported Mechanical Codes, refer to Section E.3. For associating Umler Equipment Formats to Equipment Groups, refer to Section B.2.

#### A.1.5.4.2 Assignment of Mechanical Codes of XA/YA - Overage Processing

The Umler system must determine the age of the equipment, whenever the Built or Rebuilt Date or Extended Life changes. If the system determines that the equipment is over-age according to AAR Interchange Rules 88 and 90, the applicable Mechanical Codes of XA or YA are assigned.

XA Code—If the equipment does not qualify for an extended life or rebuilt status and it is over 40 years of age and less than 50 years of age, a Mechanical Restriction Code of X and a Mechanical Restriction Reason Code of A is assigned. Refer to Appendix F: Overage Processing for XA or YA for Freight Equipment.

If the equipment is assigned to a pool type which allows the equipment to carry an XA, then the equipment may remain in the pool and the applicable Pool Control Code will remain on Umler. However, if the equipment is assigned to a pool type which does not allow it to carry an XA, then the equipment is automatically removed from the pool and the Pool Control Code is set to blank. Refer to Section B.2 Pool Type and Equipment Management Code (EMC) Relationship which identifies the Equipment Management Codes assigned to equipment based on the Pool Type of the Pool Header and identifies those Pool Types which may have the Mechanical Codes of XA (overage).

In addition, when equipment is assigned Umler Codes of XA, the Rate Indicator is changed to the applicable Rate Indicator and applicable rate fields are zeroed. Refer to Section D.1 Codes S, X, Y and Rate Indicator Changes.

YA Code—If the equipment qualifies for an extended life or rebuilt status and it is 50 years of age, a Mechanical Restriction Code of Y and a Mechanical Restriction Reason Code of A is assigned. If the equipment does not qualify for an extended life or rebuilt status and it is over 50 years of age, a Mechanical Restriction Code of Y and a Mechanical Restriction Reason Code of A is assigned. If the equipment is in a pool, the equipment is removed from the pool and the Pool Control is set to blank. Refer to Appendix F: Overage Processing for XA or YA for Freight Equipment.

In addition, when equipment is assigned the Mechanical Codes of YA, the Rate Indicator is changed to the applicable Rate Indicator and applicable rate fields are zeroed. Refer to Appendix D: Section D.1 Codes S, X, Y and Rate Indicator Changes.

### Assignment of Mechanical Codes of XD - Prohibited Couplers

If the coupler code on the equipment is identified as prohibited in interchange, the Umler system will assign a Mechanical Restriction Code of X and a Mechanical Restriction Reason Code of D. If the equipment is in a pool, it will automatically be removed from the pool and the Pool Control will be set to blank.

In addition, the Rate Indicator is changed to the applicable Rate Indicator and applicable rate fields are zeroed. Refer to Appendix D: Section D.1 Codes S, X, Y and Rate Indicator Changes.

If the stenciled mark owner changes the coupler codes to non-prohibited codes, the Umler system will automatically remove the Mechanical Codes of XD (Mechanical Restriction Code and the Mechanical Restriction Reason Code will be set to blank). The stenciled mark owner must also correct the Rate Indicator to the applicable Rate Indicator to receive car hire or mileage rates.

#### Assignment of Mechanical Codes of XJ – Prohibited Bearings

If the Bearing and Brake Shoe on the equipment has plain bearings, which are prohibited in interchange, the Umler system will assign the Mechanical Restriction Code of X and the Mechanical Restriction Reason of J. If the equipment is in a pool, it will automatically be removed from the pool and the Pool Control will be set to blank. In addition, the Rate Indicator is changed to the applicable Rate Indicator and applicable rate fields are zeroed. Refer to Appendix D: Section D.1 Codes S, X, Y and Rate Indicator Changes.

If the stenciled mark owner changes the Bearing and Brake Shoe Code to a non-prohibited code, the Umler system will remove the Umler Mechanical Codes of XJ (Mechanical Restriction Code and the Mechanical Restriction Reason will be set to blank). The owner must also correct the Rate Indicator to the applicable Rate Indicator Code to receive car hire or mileage rates.

**- 309 -**

#### Assignment of Mechanical Codes of XN - Prohibited LO w/o Stability Devices

A Covered Hopper car (LO) with a cubic feet capacity of 4000 through 4800 inclusive and not equipped with stability devices in the Truck Type and Axle Spacing is prohibited in interchange. Therefore, the Umler system assigns the Mechanical Restriction Code of X and the Mechanical Restriction Reason of N. If the equipment is in pool assignment, it will automatically be removed from the pool and the Umler Pool Control will be set to blank. In addition, the Rate Indicator is changed to an applicable Rate Indicator and applicable rate fields are zeroed. Refer to Appendix D: Section D.1 Codes S, X, Y and Rate Indicator Changes.

If the stenciled mark owner changes the Truck and Axle Spacing Code to a non-prohibited code, the Umler system will remove the Mechanical Codes of XN (Mechanical Restriction Code and the Mechanical Restriction Reason will be set to blank). The owner must also correct the Rate Indicator to the applicable Rate Indicator to receive car hire or mileage rates.

#### **Mechanical Restriction Code S, X or Y Priorities**

The S, X, and Y Mechanical Codes may be assigned by the Umler System or the stenciled mark owner. The assignment of these codes overrides all other Equipment Management Codes. In addition, there is a priority within these codes from highest to lowest – SX, S/Blank, YA, XA, YZ. Refer to Section D.2 Mechanical Restriction Code Priority (S, X, Y), which identifies the priority when over-riding existing Mechanical Codes.

#### A.1.6 **Pool Type Changes to the Pool Header**

If the Pool Operator 1, the designated reporter/agent or the Railinc Administrator changes the Pool Type on the Pool Header for a particular pool, the system will automatically verify that the equipment qualifies for assignment to the new pool type. If any equipment within the pool does not qualify for the new pool type, the Pool Type change will be rejected with a unique error code indicating that not all equipment qualifies for assignment to the new pool type. In addition, all equipment, which does not qualify for the new pool type, will be identified. If the user wants to progress the Pool Type change, the non-qualifying equipment must be manually removed from the pool before the Pool Type change will be accepted.

Once all equipment within the existing pool qualifies for the new pool type, the system will automatically generate an Equipment Management Code change on all equipment in the pool based on the newly assigned Pool Type of the Pool Header.

Refer to Section B.2 Pool Type and Equipment Management Code (EMC) Relationship and Appendix C: Pool Assignment Rules.

# A.2 Event Repository (ER) Assigned/Unassigned System Generated Codes D,E,T

The ER system is responsible for the assignment of the System Generated Codes of "D, E, and T" and these transactions are processed by the Umler system for distribution to the industry. The results of assignment and unassignment of the "D, E, and T" codes to existing Equipment Management Codes are defined. Refer to Appendix G: ER System Generated D, E, T.

# A.2.1 ER Assigned/Unassigned System Generated Code of 'D'

Special Car Order No. 200, AAR Circular OT-10, prescribes the business rules for the empty movements of cars that have been assigned the Transportation Code "D". The ER system evaluates movement events to determine whether the newly added RR marked car has not been loaded on the owner's line, RR lessee's line or to the RR where car is assigned. Delivery of the car to the owner, lessee or pool assignee generates a transaction to remove the "D".

The AAR, Mechanical Designations eligible for the TC code "D" are prescribed in AAR Circular CSD-145 and CSD-435, AAR Circular OT-10.

For the Privately-marked car, the ER will generate the Transportation code "D" prior to the cars first loaded move. Such a loaded move will remove the "D" code.

# A.2.2 ER Assigned/Unassigned System Generated Code of 'E'

Special Car Order No. 90, AAR Circular OT-10, prescribes the business rules for the empty movements of (E -Excepted) pools for assigned RR marked and Privately-marked (RR leased) cars that did not participate in the last loaded movement are assigned the Transportation Code "E" subject to Note 2 of the Order. The ER system evaluates movement events to determine whether the (E - Excepted) assigned car has been delivered to the owner's line, RR lessee's line or RR assignment line and generates a transaction to remove the "E". The termination of the car's assignment from the (E -Excepted) pool will generate a transaction to delete the "E" code.

The AAR, Mechanical Designations eligible for the TC code "E" is prescribed in AAR Circular CSD-145.

RRs can request specific pool numbers be reported to the E-Code Exception Table to generate the reporting of the Transportation Code "E" to the Umler record by submitting a request to CSC@Railinc.com providing contact information and the following pool information:

Pool No.	<b>Pool Operator</b>	Pool Type	Description	Effective Date	Expiration
5550001	NS	С	Ford	01/01/2013	12/31/9999

# A.2.3 ER Assigned/Unassigned System Generated Code of 'T'

Special Car Order No. 90, AAR Circular OT-10, prescribes the business rules for the empty movements of non-pool assigned RR marked and Privately-marked (RR leased) cars that have been assigned the Transportation Code "T". The ER system evaluates movement events to determine whether the non-assigned car did not participate in the last loaded movement on the owning railroad or the leasing railroad. When the car assigned the TC of "T" is delivered to the owner railroad or the leasing railroad, the TC code "T" is deleted from the car.

# A.3 ER Assigned/Unassigned User Reported Codes

### **User Reported Code of 'G' (Ruminant Protein)**

When a waybill is reported to the Event Repository (ER) system with a Standard Transportation Commodity Code (STCC) identified as 'proteins derived from ruminants' on a railroad or private Covered Hopper (ETC C \_ \_ \_) unit, the ER system assigns a Car Grade of 'N' and sends an update to the Umler system which assigns an User Reported Code of 'G'. Refer to <u>Appendix H: ER Ruminant Protein Assignment</u> for the business rules associated with the handling of these contaminated equipment.

#### A.3.1 User Reported Equipment Management Codes

The stenciled mark owner or their designated reporter/agent may assign or remove specific Umler Equipment Management Codes. Refer to Section <u>E.3 User Reported Equipment Management Codes by Equipment Groups</u>, and Section <u>E.4 User Reported Equipment Management Code</u> (EMC) Assignment.

For details on the assignment of user reported Equipment Management Codes of S, X, Y, refer to Section A.1.5.4.1 "User Reported Equipment Management Codes of S, X, or Y".

- 311 -

# A.4 Equipment Management Codes

The Equipment Management Codes structure consists of the following data elements:

- System Generated Code
- User Reported Code
- Pool Control Codes
- Mechanical Restriction Codes
- Mechanical Restriction Reason Codes

A brief description of the various Equipment Management Codes is defined below. In addition, Section <u>E.5 Equipment Management Codes /Umler Transportation Codes</u> defines the valid Equipment Management Code combinations and the resulting Umler Transportation Codes. To fully comprehend the Pool and Equipment Management Code process, the Equipment Management Code table must be used in conjunction with the business rules defined in this document.

### A.4.1 System Generated Code

The 'D', 'E' and 'T' System Generated Codes are assigned and removed by the ER system based on the rules associated with SCO 90.

In order to distinguish a User reported restricted in interchange condition and an Umler system generated Mechanical Codes of XJ (Mechanical Restriction of X and Mechanical Restriction Reason of J) and XN (Mechanical Restriction of X and Mechanical Restriction Reason of N), an X will be assigned to the System Generated Code when the Umler system assigns the restricted condition.

Valid values for the System Generated Code are:

- D Car newly added. For railroad marked freight equipment, this code indicates that the equipment has not been delivered to the owner. For private marked freight equipment, this code indicates that the equipment has not yet had a loaded movement.
- **E** A railroad marked car assigned to a system pool under CSD 145 and 155 that has been reloaded by other then the pool assigned road. Empty to be returned via SCO 90 routing rules.
- **T** Empty to be returned via SCO 90 routing rules.
- X Restricted in Interchange is assigned by the Umler system and applicable to XJ and XN codes. Refer to Mechanical Restriction Codes for more details.

#### A.4.2 User Reported Code

The User Reported Code is usually assigned by the stenciled mark owner. However, under certain conditions, it can be assigned by Railinc's Event Repository (ER) system.

Valid values for the User Reported Code are:

- **G** Contaminated service empty reverse route
- I Return to owner via reverse route or owner's instructions.
- **M** Mark cancelled by AAR.
- O Stenciled Mark Owner requested return for lease termination, repair program or assignment.
- Unassigned railroad stenciled equipment load to or via owner or empty reverse route
- 2 Trailer/Container must be handled in accordance with Trailer Service Rule 2.

There are two types of 'G' User Reported Codes assigned in this data element:

- A User Reported 'G' Code—The user (stenciled mark owner) may assign a 'G' User Reported Code on Railroad/Private equipment designating the equipment is contaminated. In this case, the equipment is not assigned to a contaminated 'G' pool (see <u>A.4.3</u> Pool Control Code).
- An Event Repository User Reported 'G' Code—The ER system will assign a User Reported 'G' Code when a ruminant protein is identified as the waybill commodity by Railinc's Event Repository (ER) system on a railroad/private covered hopper. In addition, the ER system will assign a Car Grade of 'N' on this equipment. Note: The User Reported Code was used instead of the System Generated Code because of the conflict with the 'D' Code.

Not all codes reported by the user are assigned under the User Reported Code. A user can assign an S, X, or Y code and these codes are reported under the Mechanical Restriction and /Mechanical Restriction Reason Codes.

#### A.4.3 **Pool Control Codes**

The Pool Control Codes are assigned by the Umler pool system. Except for the W, the codes are applicable to equipment in pool service.

Valid values for the Pool Control Code are:

- C Shipper pool service – empty reverse route
- Contaminated pool service empty reverse route
- Agent pool service empty reverse route J
- Ν National pool service – empty return via reverse route or pool operator's instructions
- Commodity pool service empty reverse route
- R Agent pool service – empty reverse route
- Unassigned covered hopper equipment empty reverse route

There are two types of 'G' Pool Control Codes assigned in this data element:

- Pool Operator Assigned to 'G' Pool The pool operator may assign the equipment to a contaminated pool type of 'G' and the car management system will assign a 'G' to the Pool Control Code. Pool assignment is only applicable to railroad owned/railroad leased equipment. In addition, the pool operator may assign a railroad owned/railroad leased unit previously defined as a User Reported 'G' to a pool, including unassigned "ruminant" covered hopper equipment.
- Event Repository Assigned to Municipal Garbage Waste (STCC 40 291 14) 'G' Pool When a municipal garbage waste STCC 40 291 14 is identified as the waybill commodity by Railinc's Event Repository system on a box car, the Event Repository system will assign a Pool Control Code of 'G' and a Car Grade of 'W' on this equipment. Once assigned, the Car Grade 'W' can only be removed by sending a written request to the csc@railinc.com justifying the reason for removing the equipment from this pool.

#### A.4.4 Mechanical Restriction Codes

The Mechanical Restriction may be assigned by the Umler system or by the stenciled mark owner and identifies equipment that is restricted in interchange service. Normally, there is a mechanical restriction reason associated with the mechanical restriction (refer to Mechanical Restriction Reason below).

Valid values for the Mechanical Restriction Code are:

- Scrap/condemned equipment
- Car restricted by AAR Interchange Rules
- Car restricted by FRA regulations

#### A.4.5 **Mechanical Restriction Reason Code**

The Mechanical Restriction Reason may be assigned by the Umler system or by the stenciled mark owner and is associated with the Mechanical Restriction Code defined above.

Valid values for the Mechanical Restriction Reason Code are:

- If X, valid Mechanical Restriction Reason Codes are A, B, C, D, F, G, J, N, T, U, W, X, Z
- If Y, valid Mechanical Restriction Reason Codes are A
- If S, valid Mechanical Restriction Reason Codes are space or X

XA and YA can only be assigned by the Umler system. XD, XJ, XN and XZ may be assigned by the stenciled mark owner or the Umler system based on Umler reported prohibited coupler codes, prohibited bearings, prohibited truck type, or errors in critical fields. All other S, X, Y codes are assigned by the equipment owner.

To identify XJ and XN assigned by the Umler system, the System Generated Code is assigned an 'X'.

Refer to Section E.3 User Reported Equipment Management Codes by Equipment Groups for the list of Equipment Management Codes which can be reported by a stenciled mark owner.

#### A.4.6 Umler TC/TCC Values

The Umler TC/TCC Values is the value assigned using the combination of the Umler System Generated, User Reported, Pool Control, Mechanical Restriction, and Mechanical Restriction Reason data elements to generate the two position Umler Transportation Code/Transportation Condition Code values.

# A.5 Processing Not Relevant to EMIS

The following section identifies certain processing that is handled differently in Umler than in EMIS, or in some cases, identifies functionality which is being retired. Existing UMLER TRAIN II messages are not affected by these changes.

### A.5.1 Participant List

In the Umler system, when equipment is added to a pool, the equipment's stenciled mark is added as a pool participant to the Pool Header Master. The participant list is used internally by Railinc to identify equipment marks assigned to the pool. During monthly processing, the Umler system removes participants from the list, if there is no longer equipment for the mark in the pool.

The pool participant list is not distributed to the industry. It is used only within Railinc. Since the EMIS system will provide easy access to the full list of equipment defined to a pool, there is no longer a need to maintain a participant list in the Pool Header Master. Therefore, all processing related to maintaining the participant list will be removed from Umler and will not be incorporated into EMIS processing.

#### A.5.2 'From' Pool Identifier Removal

In Umler, the 'From' Pool Identifier is an input data element contained in the Pool Assignment Transaction. Regardless of the value input in 'From' Pool Identifier, the Umler system automatically overlays the data element with the existing Umler Pool Identifier. Since the 'From' Pool Identifier has no value in Umler or EMIS processing, this field will be eliminated as an input data element in the EMIS inbound messages.

**Note:** Currently, the Car Service Directive Number is defined as a field in Railinc's Equipment Type Code (ETC) Table with the values of 145, 435, or 000 based on the whether the equipment is applicable to a Car Service Directive or not. This field is currently in Railinc's ETC table and is used to determine if the equipment qualifies for pool assignment.

# B.2 Pool Type and Equipment Management Code (EMC) Relationship

Pool Header Pool Type	Umler Transportation Code	Umler EMC
С	С	Pool Control = C
	XA (restricted over 40)	Mechanical Restriction = X
	XB (Requires ABT inspection)	Mechanical Restriction Reason = A, B
G	G	Pool Control = G
	XA (restricted over 40)	Mechanical Restriction = X
	XB (Requires ABT inspection)	Mechanical Restriction Reason = A, B
N	N	Pool Control = N
Т	R	Pool Control = R
	XA (restricted over 40)	Mechanical Restriction = X
	XB (Requires ABT inspection)	Mechanical Restriction Reason = A, B
J	J	Pool Control = J
	XA (restricted over 40)	Mechanical Restriction = X
	XB (Requires ABT inspection)	Mechanical Restriction Reason = A, B
Р	Р	Pool Control = P
	XA (restricted over 40)	Mechanical Restriction = X
	XB (Requires ABT inspection)	Mechanical Restriction Reason = A, B

The above table identifies the Umler Transportation Code and Umler Equipment Management Codes (EMC) assigned based on the Pool Type. In addition, the table identifies which Pool Types allow equipment to be assigned to it when the equipment is overage. Refer to Section <u>A.1.5.4.2</u> <u>Assignment of Mechanical Codes of XA/YA – Overage Processing.</u>

**-316 -**

<sup>&</sup>lt;sup>1</sup> Intermodal flat equipment with FC Mechanical Designations is not permitted in pools with a J (agent pool) Pool Type.

<sup>&</sup>lt;sup>2</sup> Box, gondola, hopper, flat, intermodal flat and tank equipment groups (excludes Maintenance of Way), assignable to railroad, joint or national pools or equipment not assignable to these pools, since the Critical Error, results in the assignment of Mechanical Codes which are restricted in interchange, will remove railroad, joint, or other national pool assignments. Refer to <a href="Appendix C: Pool Assignment Rules">Appendix C: Pool Assignment Rules</a>. In addition, tank equipment may be assigned if the equipment does not contain double shelf couplers. Refer to <a href="Appendix C: Pool Assignment Rules">Appendix C: Pool Assignment Rules</a>.

Pool Category	Pool Header	Security Rules	Rule 260 Code	Railroad Controlled	Equipment Type Code	Existing Equipment
	Pool Type				(Mechanical Designation)	Management Codes
Joint Pool Identifiers are identified with a 3 digit prefix of 998.	C,G,P,T	The submitter of the activity must be Pool Operator 1 defined in the Pool Header, their agent as granted through security or Railinc Administrator.	Not Applicable.	The equipment must be a stenciled railroad unit or under railroad control (a private unit with a Railroad Lessee)	The Equipment Type Code (Mechanical Designation) of the equipment must be valid for the Pool Type Code defined in the Pool Header (refer to Appendix B: Car Management Processing Tables)	The existing Equipment Management Codes (EMC) must not indicate that the equipment is restricted in interchange (X,Y) or identified as Scrap (S) or identified with a cancelled mark (M).  Exception: XA and XB are the only EMCs that may be included in these pools.  Note: For Pool Types C, J, and P, the corresponding Pool Control is assigned. For Pool Type T, an 'R' Pool Control Code is assigned.
National Pool (Header Managed by Railinc Administrator) Numbers 9990001 thru 9990011 and 9990700 thru 9999999.	N	The submitter of the activity must be the railroad owner of the stenciled mark, the railroad lessee of the private equipment, or the Railinc Administrator.	Not Applicable.	The equipment must be a stenciled railroad unit or under railroad control (a private unit with a Railroad Lessee)	The Equipment Type Code of the equipment must be valid for the Pool Type Code defined in the Pool Header (Appendix B: Car Management Processing Tables)	The existing Equipment Management Codes (EMC) must not indicate that the equipment is restricted in interchange (X,Y) or identified as Scrap (S) or identified with a cancelled mark (M).  Note: Overage equipment (XA) is not permitted in National Pool.  Note: XB requiring ABT inspection are permitted in National Pool.

# **Umler**<sup>®</sup>

Pool Category	Pool Header	Security Rules	Rule 260 Code	Railroad Controlled	Equipment Type Code	Existing Equipment
	Pool Type				(Mechanical Designation)	Management Codes
National Pools Managed by TTX will consist of pool numbers 9990012 thru 9990699 inclusive. These pool numbers are designated for Heavy Duty, Reload, and Box Car Pools.  Railinc will assign TTX authority to maintain these pools.	N	If the Pool Operator is TTX (Heavy Duty pools operated under a pooling agreement), then the submitter of the activity must be 'TTX' or Railinc Administrator  If the Pool Operator is RLOD (Reload pools operated under a pooling agreement), the submitter of the activity must be TTX, the railroad owner of the stenciled mark, be the railroad lessee of the private equipment, or the Railinc Administrator.  If the Pool Operator is RBXC (Box car pools operated under a pooling agreement), the submitter of the activity must be TTX, the railroad owner of the stenciled mark, the railroad lessee of the private equipment, or the Railinc Administrator.	Not Applicable.	The equipment may be a private or railroad The equipment must be a stenciled railroad unit or under railroad control (a private unit with a Railroad Lessee) The equipment must be a stenciled railroad unit or under railroad control (a private unit with a Railroad Lessee)	The Equipment Type Code of the equipment must be valid for the Pool Type Code defined in the Pool Header (refer to Appendix B: Car Management Processing Tables)	The existing Equipment Management Codes (EMC) must not indicate that the equipment is restricted in interchange (X,Y) or identified as Scrap (S) or identified with a cancelled mark (M).*  Note: Overage equipment (XA) is not permitted in National Pool.  Note: XB requiring ABT inspection are permitted in National Pool.

<sup>\*</sup> The asterisk identifies rules that will change if the Equipment Asset Management Working Committee (EAMWC) approves new EMIS codes proposed by the EMIS Core team. Refer to Appendix N.

# **C.2** Pool Assignment and Unassignment Security Rules

#### **Umler Mechanical Restriction Codes** Appendix D:

#### Codes S, X, Y and Rate Indicator Changes **D.1**

Ownership (Stenciled Mark Owner)	Valid Rate Indicator	Umler Mechanical Restriction S, X, Y with Errors	Umler Mechanical Restriction S, X, Y without Errors	Zero Rates
Private Freight (, B, C, see Appendix J:)	2/4/6	0	6	Zero CHARM* Mileage Rate
Railroad Sub19 (Equipment Group = Box, see Appendix J:)	В	Р	Р	Zero CHARM* Mileage and Hourly Rates
Railroad Non-Sub19 (, B, and C, see <u>Appendix J:</u> )	М	Q	Q	Zero CHARM* Mileage and Hourly Rates
Trailer/Container/Chassis (see Appendix J:)	1	0	0	Already Zero Rated in CHARM*
Locomotive, EOT, and Maintenance of Way (see Appendix J:)	6	6	6	Already Zero Rated in CHARM*

Additional Processing: Use the following rules to re-instate the Rate Indicator when an S, X, Y Rate Indicator condition is removed.

- If a Locomotive, End of Train Device or Maintenance of Waywith ETC Prefix M, Steel Wheel Set (ETC Prefix Q8), assign a Rate Indicator of 0 if in error or a 6 if not in error.
- If a Trailer/Container/Chassis, assign a Rate Indicator of 0 if in error or a 1 if not in error.
- If a Private Freight unit, assign a Rate Indicator of 0 if in error. If not in error and a TTX unit assign a 4 and if not a TTX unit assign a 2. The stenciled mark owner will be responsible for assigning a Rate Indicator of 6 (zero rate) if applicable.
- If a Railroad Freight unit with a Rate Indicator of P, retain the Rate Indicator of P if in error or assign a Rate Indicator of B if not in error.
- If a Railroad Freight unit with a Rate Indicator of Q, retain the Rate Indicator of Q if in error or assign a Rate Indicator of M if not in error.

To relate Umler Formats to the Umler Equipment Group, refer to Section B.2.

\*CHARM – The Car Hire Accounting Rate Master is a monthly industry file created by Railinc's CHARM system.

The first column of this table titled "Input EMC Change" indicates what is being submitted as a change. The column headings following the double lines indicate the various Equipment Management Codes that could exist prior to the processing of the EMC change. The value in the cell at the intersection of the two is the resulting EMC value after processing is completed.

Note that the resulting (processed) EMC may differ from that submitted due to the relative priority of the Codes. The S and Y Transportation Codes have a higher priority then all other EMC codes and can only be removed by the reporting (i.e. input) of an EMC values of all blanks with the exception of S,X which can only be removed by the Railinc Administrator.

For UMLER assigned X and YA Equipment management Codes, which are assigned based on equipment data elements, the codes can only be removed by changing the applicable data element(s).

<sup>&</sup>lt;sup>1</sup> The User Reported Code of '2' is only applicable to trailers and is identified in Umler by the TC/TCC of 'AB'.

To relate Umler Equipment Groups to Umler Formats and Equipment Type Codes, refer to Section B.2.

<sup>&</sup>lt;sup>2</sup> The User Reported Code of 'M' can only be reported by the Railinc Administrator.

<sup>&</sup>lt;sup>3</sup> The User Reported Code of 'U' is only applicable to equipment defined under CSD 150 and 155 in Section <u>B.1 Mechanical Designations</u> <u>Applicable to Car Directives and Orders</u>

<sup>&</sup>lt;sup>1</sup> Processing for XB would be the same for the User Reported codes of XC, XD, XF, XG, XJ, XN, XP, XT, XU, XW, or XZ. Refer to Section <u>E.3</u> for a list of valid User Reported Equipment Management Codes for the various Umler Equipment Groups.

#### Errors Messages

- If the user reports a code that is not applicable to the equipment based on the equipment type, i.e., XU is applicable to all equipment types, etc, provide a message indicating that the equipment type is not valid for the reported EMC. Refer to Appendix K:.
- If the user reports the same Umler code which already existing in Umler, then provide a message indicating that the equipment is already assigned with the applicable Umler EMC Code.
- If the user reports a User Reported G and the equipment has a Pool Control of G, provide a message indicating that the equipment is assigned to a G pool. The submitter must use a Pool Unassignment (Pool Identifier set to '0000000') to remove equipment from a G pool. When it is removed from a G pool, the system will automatically assign a User Reported G. Do not generate this message if the activity was generated by the ER system.
- If the user reports an Umler User Reported code that is not defined above, provide a message indicating that the code is not valid based on the existing Umler Equipment Management Codes.
- \* A Sequence Number (Seq #) followed by an asterisk (\*) identify new EMIS codes proposed by the EMIS Core team pending approval by the Equipment Asset Management Working Committee (EAMWC). These codes allow for more information to be provided on the status of the equipment then currently available through the Umler system. Section <u>E.5</u> describes the EMIS Equipment Management Codes. Sequence Numbers followed by an asterisk (\*) identify the new EMIS Core proposed codes.
- Note 1: The assignment of the TCs S\_\_, SX, XA, XZ and YA generate the Rate Indicator Code 6 to the CHARM file to zero (0) rate the car hire and mileage rate.

**- 339 -**

Note 2: Cars assigned the TCs XA and XB can be assigned to pools. See Seq. #'s 33 – 44 in Section E.5.

#### **Equipment Management Codes /Umler Transportation Codes E.5**

Appendices

		Umler Equi	pment Managei	ment Codes			
Sequence Number	System Generated	User Reported	Pool Control	Mechanical Restriction	Mechanical Restriction Reason	Umler TC/TCC	Description
1						_/_	No Equipment Management Codes (EMC)
2		M				M_	Railinc assigned M. The reporting mark has been canceled by the AAR. Railroad company no longer exists. Empty car to be handed via reverse route.
3		0				0_	Stenciled Mark Owner assigned O. Stenciled Mark Owner has requested return of equipment for lease termination or repairs. Car may not be loaded by any carrier. Empty car to be handled under provisions of CSD 175.
4		U				U_	Stenciled Mark Owner assigned U - After unloading, handling covered under CSD 150
5	T					T_	Railinc ER generated T
6	T	U				TU	Railinc ER generate T with a user reported U
7	T	0				TO	Railinc ER generated T with a user reported O
8		G				G_	Stenciled Mark Owner assigned G - Car is in contaminated service.
9		G	W			GW	Railinc ER generated G when ruminant protein commodity is identified in the TRAIN II Waybill on a railroad or private covered hopper (ETC C).
10			W			W	Railinc Umler generated W for an unassigned Covered Hopper under CSD 435.
11			С			C_	Railinc Umler generated C - Railroad car assigned to a specific shipper at a specific location (CSD 145 or 435). Car cannot be loaded. Empty car to be handled via reverse route. Pool Type is 'C'.
12			G			G_	Car is in contaminated commodity service. Stenciled Mark Owner assigned to a railroad contaminated pool or Railinc ER generated G when municipal garbage waste commodity (STCC 4029114) is identified in the TRAIN II Waybill on a box car (ETC A, B, or R).
13			J			J_	Railinc Umler generated J - Car is assigned to an Agent Pool (CSD 145 or 435). Loaded car may be loaded by any carrier without regard to route or destination. Empty car to be handled via reverse route. Pool Type is 'J'.
14			N			N_	Railinc Umler generated N - Car is in a National Pool (CSD 145). When the National pool has a pool operator defined (applicable to Heavy capacity flat car, box car and Reload pools), the equipment may only be loaded with the pool operator's permission. Empty cars to be handled per pool operator's instructions or via reverse route.
15		0	N			NO	Car is in a National Pool (CSD 145) (refer to sequence number 14) and stenciled mark owner has assigned an O to request the return of equipment under CSD 175.
16			Р			P_	Railinc Umler generated P - Car is assigned to a Commodity Pool (CSD 145 or 435). Empty car cannot be loaded. When empty, car should move via reverse route. Pool Type is 'P'.
17			R			R_	Railinc Umler generated R - Car is assigned to an Agent Pool (CSD 145 or 435). Empty car cannot be loaded. When empty, car should move via reverse route. Pool Type is 'T'.
18	D					D_	Railinc ER generated D to identify a newly added freight car. For railroad marked freight equipment, indicates that the equipment has not been delivered to the owner. For private marked freight equipment, indicates that the equipment has not had a loaded Event reported to the ER.
19	D		С			DC	Railinc ER generated D (refer to sequence number 18) - system car assigned to a C Pool (refer to sequence number 11)
20	D		G			DG	Railinc ER generated D (refer to sequence number 18) - system car assigned to a G pool (refer to sequence number 12)

June 2025 **- 340 -**

		Umler Equi	pment Manage	ment Codes				
Sequence Number	System Generated	User Reported	Pool Control	Mechanical Restriction	Mechanical Restriction Reason	Umler TC/TCC	Description	
21	D	G				GD	Railinc ER generated D (refer to sequence number 18) – and Railinc ER generated G on railroad or private covered hopper loaded with ruminant protein (refer to sequence number 9)	
22	D	G				DG	Railinc ER generated D (refer to sequence number 18) - system car assigned a 'G' by the stenciled mark owner (refer to sequence number 8)	
23	D		J			DJ	Railinc ER generated D (refer to sequence number 18) - system car assigned to J pool (refer to sequence number 13)	
24	D		N			DN	Railinc ER generated D (refer to sequence number 18) - system car assigned to an N pool (refer to sequence number 14)	
25	D		Р			DP	Railinc ER generated D (refer to sequence number 18) - system car assigned to P pool (refer to sequence number 16)	
26	D		R			DR	Railinc ER generated D (refer to sequence number 18) - system car assigned to T pool (refer to sequence number 17)	
27	D		W			DW	Railinc ER generated D (refer to sequence number 18) on unassigned Covered Hopper (refer to sequence number 10 ETC 'C ')	
28	E		С			EC	Railinc ER generated E (Assigned cars in system pool loaded by other than pool operator. Empty to be returned via SCO90 routing sequence numbers) - system car assigned to C pool (refer to sequence number 11)	
29	E		G			EG	Railinc ER generated E (refer to sequence number 28) - system car assigned to a G pool (refer to sequence number 12)	
30	E		J			EJ	Railinc ER generated E (refer to sequence number 28) - system car assigned to J pool (refer to sequence number 13)	
31	E		Р			EP	Railinc ER generated E (refer to sequence number 28) - system car assigned to P pool (refer to sequence number 16)	
32	Е		R			ER	Railinc ER generated E - system car assigned to T pool (refer to sequence number 17)	
33				Х	А	XA	Railinc Umler generated XA – Based on service life of the equipment. Prohibited in interchange service by AAR Interchange Rules	
34			С	Х	Α	XA	Railinc Umler generated XA – Assigned to C pool (refer to sequence number 11) but restricted in interchange	
35			G	Х	Α	XA	Railinc Umler generated XA – Assigned to G pool (refer to sequence number 12) but restricted in interchange	
36			J	Х	Α	XA	Railinc Umler generated XA – Assigned to J pool (refer to sequence number 13) but restricted in interchange	
37			Р	Х	Α	XA	Railinc Umler generated XA – Assigned to P pool (refer to sequence number 16) but restricted in interchange	
38			R	Х	Α	XA	Railinc Umler generated XA — Assigned to T pool (refer to sequence number 17) but restricted in interchange	
39				Х	В	XB	Stenciled Mark Owner assigned XB – Restricted in Interchange due to Brakes	
40			С	Х	В	ХВ	Railinc Umler generated XB – Assigned to C pool (refer to sequence number 11) but restricted in interchange	
41			G	Х	В	ХВ	Railinc Umler generated XB – Assigned to G pool (refer to sequence number 12) but restricted in interchange	
42			J	Х	В	ХВ	Railinc Umler generated XB – Assigned to J pool (refer to sequence number 13) but restricted in interchange	
43			Р	Х	В	ХВ	Railinc Umler generated XB – Assigned to P pool (refer to sequence number 16) but restricted in interchange	

		Umler Equi	pment Managei	ment Codes			
Sequence Number	System Generated	User Reported	Pool Control	Mechanical Restriction	Mechanical Restriction Reason	Umler TC/TCC	Description
44			R	Х	В	ХВ	Railinc Umler generated XB — Assigned to T pool (refer to sequence number 17) but restricted in interchange
45				Χ	С	XC	Stenciled Mark Owner assigned XC – Restricted in Interchange due to Axles
46	Χ			X	D	XD	Railinc Umler generated XD – Restricted in interchange due to having prohibited coupler
47			N	Х	D	XD	Railinc Umler generated XD – Restricted in interchange because tank does not have double shelf couplers defined in the Draft Gear/Coupler field in Umler. Must change the Draft Gear/Coupler in Umler to remove the XD.
48				X	D	XD	Stenciled Mark Owner assigned XD – Restricted in interchange due to Couplers
49				X	F	XF	Stenciled Mark Owner assigned XF– Restricted in interchange due to Coupler Yokes
50				Χ	G	XG	Stenciled Mark Owner assigned XG – Restricted in interchange due to Draft Gears
51	Х			Х	J	XJ	Railinc Umler generated XJ – Restricted in interchange due to the equipment having Plain Bearings in the Bearing and Brake Shoe field in Umler. Must change the Bearing /Brake Shoe to removed XJ.
52				X	J	XJ	Stenciled Mark Owner assigned XJ – Restricted in interchange due to Bearings
53	Х			Х	N	XN	Railinc Umler generated XN – Restricted in interchange due to the Covered Hopper (LO) equipment having- a cubic feet capacity 4000 to 4800 inclusive and not equipment with stability devices in the Truck Type and Axle Spacing field in Umler. Must change the Truck Type and Axle Spacing to removed XN.
54				Х	N	XN	Stenciled Mark Owner assigned XN – Restricted in interchange due to Truck
55				Х	Р	XP	Stenciled Mark Owner assigned XP— Restricted in interchange due to Truck Side Frames
56				Х	Т	XT	Stenciled Mark Owner assigned XT– Restricted in interchange due to Truck Bolsters
57				Х	U	XU	Stenciled Mark Owner assigned XU – Equipment restricted in Interchange by AAR or owner
58				Х	W	XW	Stenciled Mark Owner assigned XW – Restricted in Interchange due to Wheels
59				X	Χ	XX	Railinc Umler generated XX – Expired EW Notice
60			N	Χ	Z	XZ	System generated XZ – Restricted in interchange due to data element conflicts
61				X	Z	XZ	Stenciled Mark Owner assigned XZ – Restricted in Interchange due to other restrictions defined by owner
62				S		S_	Stenciled Mark Owner assigned S,Blank to identify a condemned car or car destined for scrap or dismantling. Car should only be moving empty by agreement of handling carriers.
63				S	Х	SX	Stenciled Mark Owner assigned SX to identify a car sold for scrap under AAR Interchange, Rule 88, can never re-enter (rail) service. If reported in error, can only be removed by the Railinc Administrator.
64				Υ	Α	YA	Railinc Umler Generated YA – Based on the age of the equipment 50 years. Restricted in interchange service by FRA regulations.
65		2				AB	Stenciled Mark Owner assigned AB – Only applicable to Trailers and Containers. Trailer/Container cannot be designated a general service unit by owner. Must be handled in accordance with Trailer Service Rule 2.
66		G		Х	Α	XA	Railinc Umler generated XA – Restricted in Interchange due to Age and User Reported G (refer to sequence number 8 and 33).
67		G		Х	В	ХВ	Stenciled Mark Owner assigned or generated by Umler for no ABT inspection reported XB – Restricted in Interchange due to Brakes and User Reported G (refer to sequence number 8 and 39).
68		G		Х	С	XC	Stenciled Mark Owner assigned XC – Restricted in Interchange due to Axles and User Reported G (refer to sequence number 8 and 45).

		Umler Equi	pment Managei	ment Codes		specification i	
Sequence Number	System Generated	User Reported	Pool Control	Mechanical Restriction	Mechanical Restriction Reason	Umler TC/TCC	Description
69	Х	G		Х	D	XD	Railinc Umler generated XD – Restricted in interchange due to having prohibited coupler and User Reported G (refer to sequence number 8 and 46).
70		G	N	Х	D	XD	Railinc Umler generated XD – Restricted in interchange because tank does not have double shelf couplers defined in the Draft Gear/Coupler field in Umler and User
71		G		Х	D	XD	Reported G (refer to sequence number 8 and 47).  Stenciled Mark Owner assigned XD — Restricted in Interchange due to Couplers and User
72		G		Х	F	XF	Reported G (refer to sequence number 8 and 48).  Stenciled Mark Owner assigned XF – Restricted in Interchange due to Coupler Yokes and
73		G		X	G	XG	User Reported G (refer to sequence number 8 and 49).  Stenciled Mark Owner assigned XG – Restricted in Interchange due to Draft Gears and User Reported G (refer to sequence number 8 and 50).
74	Х	G		Х	J	XJ	Railinc Umler generated XJ – Restricted in interchange due to the equipment having Plain Bearings in the Bearing and Brake Shoe field in Umler and User Reported G (refer to sequence number 8 and 51).
75		G		Х	J	XJ	Stenciled Mark Owner assigned XJ – Restricted in Interchange due to Bearings and User Reported G (refer to sequence number 8 and 52).
76	Х	G		Х	N	XN	Railinc Umler generated XN – Restricted in interchange due to the Covered Hopper (LO) equipment having- a cubic feet capacity 4000 to 4800 inclusive and not equipment with stability devices in the Truck Type and Axle Spacing field in Umler and User Reported G (refer to sequence number 8 and 53).
77		G		Х	N	XN	Stenciled Mark Owner assigned XN – Restricted in Interchange due to Trucks and User Reported G (refer to sequence number 8 and 54).
78		G		Х	Р	XP	Stenciled Mark Owner assigned XP – Restricted in Interchange due to Truck Side Frames and User Reported G (refer to sequence number 8 and 55).
79		G		Х	Т	ХТ	Stenciled Mark Owner assigned XT – Restricted in Interchange due to Trucks Bolsters and User Reported G (refer to sequence number 8 and 56).
80		G		Х	U	XU	Stenciled Mark Owner assigned XU – Equipment restricted in Interchange reported by AAR or owner and User Reported G (refer to sequence number 8 and 57).
81		G		Х	W	XW	Stenciled Mark Owner assigned XW – Restricted in Interchange due to Wheels and User Reported G (refer to sequence number 8 and 58).
82		G		Х	Х	XX	Railinc Umler Generated XX – Restricted in Interchange due to expiration of an EW Notice (refer to sequence number 59).
83		G	N	Х	Z	XZ	Railinc Umler generated XZ – Restricted in interchange due to critical fields in Umler being in error and User Reported G (refer to sequence number 8 and 60).
84		G		S		S_	Stenciled Mark Owner assigned S,Blank to identify a condemned car or car destined for scrap or dismantling and User Reported G (refer to sequence number 8 and 62).
85		G		S	Х	SX	Stenciled Mark Owner assigned SX to identify a car sold for scrap under AAR Interchange, Rule 88, can never re-enter (rail) service and User Reported G (refer to sequence number 8 and 63).
86		G		Y	А	YA	Railinc Umler Generated YA – Based on the age of the equipment exceeding 50 years. Restricted in interchange service by FRA regulations and User Reported G (refer to sequence number 8 and 64).
87		М		Х	А	XA	Railinc Umler generated XA – Restricted in Interchange due to Age and Railinc Reported M (refer to sequence number 2 and 34).
88		M		Х	В	ХВ	Stenciled Mark Owner assigned XB – Restricted in Interchange due to Brakes and Railinc Reported M (refer to sequence number 2 and 39).

90	Х	M		Х	D	XD	Stenciled Mark Owner assigned XD – Restricted in Interchange due to Couplers and User Reported M (refer to sequence number 2 and 46).
91		M	N	Х	D	XD	Stenciled Mark Owner assigned XD – Restricted in Interchange due to Couplers and Railinc Reported M (refer to sequence number 2 and 47).
92		M		Х	D	XD	Stenciled Mark Owner assigned XD – Restricted in Interchange due to Couplers and Railinc Reported M (refer to sequence number 2 and 48).
93		M		Х	F	XF	Stenciled Mark Owner assigned XF – Restricted in Interchange due to Coupler Yokes and Railinc Reported M (refer to sequence number 2 and 49).
94		M		Х	G	XG	Stenciled Mark Owner assigned XG – Restricted in Interchange due to Draft Gears and Railinc Reported M (refer to sequence number 2 and 50).
95	Х	M		Х	J	XJ	Stenciled Mark Owner assigned XJ – Restricted in Interchange due to Bearings and Railinc Reported M (refer to sequence number 2 and 51).
96		M		Х	J	XJ	Stenciled Mark Owner assigned XJ – Restricted in Interchange due to Bearings and Railinc Reported M (refer to sequence number 2 and 52).
97	Х	M		Х	N	XN	Railinc Umler generated XN — Restricted in interchange due to the Covered Hopper (LO) equipment having- a cubic feet capacity 4000 to 4800 inclusive and not equipment with stability devices in the Truck Type and Axle Spacing field in Umler and Railinc Reported M (refer to sequence number 2 and 53).
98		M		Х	N	XN	Stenciled Mark Owner assigned XN – Restricted in Interchange due to Trucks and Railinc Reported M (refer to sequence number 2 and 54).
99		M		Х	Р	XP	Stenciled Mark Owner assigned XP – Restricted in Interchange due to Truck Side Frames and Railinc Reported M (refer to sequence number 2 and 55).
100		M		Х	Т	XT	Stenciled Mark Owner assigned XT – Restricted in Interchange due to Trucks Bolsters and Railinc Reported M (refer to sequence number 2 and 56).
101		M		Х	U	XU	Stenciled Mark Owner assigned XU – Tank equipment restricted in Interchange and Railinc Reported M (refer to sequence number 2 and 57).
102		M		Х	W	XW	Stenciled Mark Owner assigned XW – Restricted in Interchange due to Wheels and Railinc Reported M (refer to sequence number 2 and 58).
103	Х			Х	Х	XX	Railinc Umler generated XX – Restricted in Interchange due to Early Warning expiration.
104		M	N	Х	Z	XZ	Railinc Umler generated XZ – Restricted I interchange due to critical fields in Umler being in error and User Reported G (refer to sequence number 8 and 59).
105		M		Х	Z	XZ	Stenciled Mark Owner assigned XZ – Restricted in Interchange due to other restrictions defined by the owner and Railinc Reported M (refer to sequence number 2 and 61).
106		M		S		S_	Stenciled Mark Owner assigned S,Blank to identify a condemned car or car destined for scrap or dismantling and Railinc Reported M (refer to sequence number 2 and 62).
107		M		S	Х	SX	Stenciled Mark Owner assigned SX to identify a car sold for scrap under AAR Interchange, Rule 88, can never re-enter (rail) service and Railinc Reported M (refer to sequence number 2 and 63).
108		M		Y	А	YA	Railinc Umler Generated YA – Based on the age of the equipment 50 years. Restricted in interchange service by FRA regulations and AAR Interchange Rule 88 and Railinc Reported M (refer to sequence number 2 and 64).

## **Appendix F:** Overage Processing for XA or YA for Freight Equipment

	Overage Processing for Freight Equipment – Assignment of XA/YA							
Built Dat	e < 01/64	Built Date > 12	/63 and < 07/74	Built Date > 06/74				
Extended Life = N	Extended Life = C and a Special Train Service Codes of WD	Extended Life = C	Extended Life = U	Extended Life = E	Extended Life = V			
Permitted To 40	Permitted To 50	Permitted To 50	Permitted To 40	Permitted To 50	Permitted To 65			

#### Extended Life = V, 65 years of age

If the freight equipment is certified for an extended life of 65 (Extended Life = V), then use the built month in calculating the age.

65 Age Calculation = Current Processing Month and Year – Umler Built Month and Year

If the calculated age is 65 years or older, then assign 'Y' to the Mechanical Restriction and assign 'A' to the Mechanical Restriction Reason. YA will override all Equipment Management Codes except scrap codes (S, blank or S, X).

#### Rebuilt or Extended Life = C or E, 50 years of age

If the equipment is rebuilt or is built after 06/74, then use the month in calculating the age.

If the equipment is built prior to 07/74 and is certified for an extended life (Extended Life = C), then use the month in calculating the age.

**50 Age Calculation** = Current Processing Month and Year – Umler Built Month and Year

If the calculated age is over 50, then assign 'Y' to the Mechanical Restriction and assign 'A' to the Mechanical Restriction Reason. YA will override all Equipment Management Codes except scrap codes (S, blank or S,X).

#### Extended Life = N or U

#### Over 50 years of age

If the equipment is not rebuilt and is built prior to 07/74 and is not certified for an extended life (Extended Life = U or N), then do not use the month in calculating the age.

50 Age Calculation = Current Processing Year - Umler Built Year

If the calculated age is over 50, then assign 'Y' to the Mechanical Restriction and assign 'A' to the Mechanical Restriction Reason. YA will override all Equipment Management Codes except TC/TCC codes S, blank or S, X.

#### Over 40 years of age

If equipment is not over 50 and is not rebuilt and is not certified for an extended life (Extended Life = N or U), then determine if the equipment is over 40.

**40 Age Calculation** = Current Processing Year – Umler Built Year

If the calculated age is greater than 40 and less than 50, then assign an Umler Mechanical Codes of XA. XA will override all Equipment Management Codes except TC/TCC codes S, blank or S, X.

#### **Additional Processing**

- 1. Overage Processing is applicable to freight equipment including Maintenance of Way.
- 2. When an XA or YA is assigned, the equipment is assigned the applicable Rate Indicator 6 and zero in the rates, refer to Appendix D.1.
- 3. When the Built Date or Rebuilt Date or the Extended Life fields change in Umler, the XA/YA processing should be done to determine if the XA/YA condition still applies, i.e., the XA goes to a YA, a YA goes to an XA or the unit is no longer considered over-aged. If the unit is no longer overage, then the Rate Indicator will be corrected to the applicable Rate Indicator.
  - If a railroad box car subject to Sub 19 is in conflict with a Rate Indicator P, then assign a Rate Indicator of B when corrected.
  - If a railroad equipment unit is in conflict with a Rate Indicator Q, then assign a Rate Indicator of M when corrected.
  - If a private freight unit is in conflict with a Rate Indicator 0, then assign a Rate Indicator of 2.
  - If the equipment is a Maintenance of Way, then assign a Rate Indicator of 6.

#### Ruminant Protein - User Reported G Code Assignment

When the Event Repository (ER) system identifies a railroad or private Covered Hopper (C\_1\_), which has been loaded with a ruminant protein, the ER system bridges activity to the Umler system. The Umler system will generate an Umler User Reported G Code to the industry.

In addition, the ER system will create an ER Car Grade (Car Grade N by waybill) to the industry (TRAIN82/83) and bridge a Car Grade transaction to the Umler system for distribution to the industry. The assignment of the Car Grade N can only be developed by an ER waybill reporting. It cannot be done through the Umler system.

When the ER system identifies a "ruminant protein" loaded in a covered hopper for the first time, the Umler system does the following:

- If the equipment is not in a pool, the system will set the Umler User Reported to a G.
- If the equipment is in a pool, including a 'G' pool, the system will remove the equipment from the pool and set the Umler User Reported Code to G and set the Pool Control to W.

When the ER system identifies a "ruminant protein" loaded again in a covered hopper, the Umler system does the following:

• If the equipment is not assigned or assigned in a G pool, the system retains the current status of the equipment. Neither the pool assignment nor the Pool Control Code of G will be updated.

After the initial assignment of the User Reported G Code, a railroad can assign the equipment to one of its G pools but it cannot assign it to any other Pool Type. When the equipment is assigned to the G pool, then the User Reported Code is set to blank and the Pool Control Code is set to G.

When the ER system identifies a "ruminant protein" loaded in a covered hopper and the equipment has an Equipment Management Code of M, S, X, or Y, the existing codes cannot be overlaid. However, the Car Grade N will be created and distributed to the industry.

Once the "ruminant protein" User Reported G Code is assigned, it can only be overlaid by a Transportation Code of M, S, X, or Y. Refer to Ruminant Protein—Equipment Management Code M, S, X, Y Assignment below.

Once the Car Grade N is reported, another Car Grade Inspection cannot be reported in the ER or Umler system that would supercede the Car Grade N.

The combination of User Reported G Code or the Pool Control G Code or the Equipment Management Codes of M, S, X, or Y and the Car Grade N are needed to identify a "ruminant protein" car. These codes (N and G) are permanently assigned and will remain with the car until retired or dismantled. When the car grade N is assigned to a car as a result of the reporting of a waybill with an incorrect STCC, the erring railroad must provide documentation to correct the error. Such documentation is to be reported to Railinc's Customer Success Center in order to have a Railinc administrator remove the car grade N and Transportation Code G (see Appendix A of Car Service Rule 14, #3).

The assignment of the ruminant protein 'G' is defined below.

G (Ruminant Protein)	Blank, Blank G,Blank	All fields blank User Reported=G	G,Blank	User Reported=G Car Grade=N
Private car not leased to a Railroad	O,Blank	User Reported=O

	applicable reject			

### Ruminant Protein – Equipment Management Code M, S, X, Y Assignment

The Equipment Management Codes of M, S, X, or Y may be assigned to "ruminant protein" Covered Hoppers in addition to other types of equipment. These codes may be assigned by the stenciled mark owner, the Umler system (due to the equipment's age or other events) or the Railinc Administrator. These codes will override the "ruminant protein' User Reported G Code or the Pool Control G Code. However, the Car Grade N will still identify the equipment as a "ruminant protein" car.

If the M, S or X or Y is removed from the equipment, then the User Reported Code will be set to 'G' and the applicable prior Equipment Management Codes will be set to blank. For railroad equipment or private equipment leased to a railroad (railroad controlled), the Umler Pool Control will be set to W.

Blank, Blank	M,Blank	User Reported=M	G,W	User Reported = G

#### **Equipment Type Codes (ETC) Appendix I:**

## Equipped Box Cars ETC A\_\_\_

#### FIRST NUMERIC:

0-Not Used

1-Less than 49' inside length

2-Less than 49' inside length, cushion draft gear/underframe

3-49' and less than 59' inside length

4-49' and less than 59' inside length, cushion draft gear/underframe

5-59' and less than 79' inside length

6-59' and less than 79' inside length, cushion draft gear/underframe

7-79' and over, inside length

8-79' and over, inside length, cushion draft gear/underframe

9-Not Used

#### SECOND NUMERIC:

0-XP

1-XPI

2- Not Used

3-XL

4-XLI

#### THIRD NUMERIC:

0-Other type door/opening

1-Sliding door, opening, Side Door Width less than 9'

2-Sliding door, opening, 9' less than 11'

3-Sliding door, opening, 11' and over

4-Plug door, opening, less than 9'

5-Plug door, opening, 9' less than 11'

6-Plug door, opening, 11' and over

7-Combination (Sliding-Plug) doors

8, 9-Not Used

XL-Loader Equipped. Box car similar in design to "XM", with steel perforated side walls or equipped with interior side rails for securement of certain types of lading and/or permanently attached movable bulkheads.

XP-Boxcar similar in design to "XM", but which is specially equipped, designed, and/or structurally suitable for a specific commodity loading; except, boxcars. "XM" dedicated to the transportation of commodities in paragraph A, Rule 97, AAR Interchange Rules, must be designated "XP".

NOTE 1: When cars qualified as XP or XL are insulated, the suffix "I" must be affixed to the applicable designation and reported to the Umler file.

## Unequipped Box Cars ETC B

#### FIRST NUMERIC:

0-Not Used

1-Less than 49' inside length

2-Less than 49' inside length, cushion draft gear/underframe

3-49' and less than 59' inside length

4-49' and less than 59' inside length, cushion draft gear/underframe

5-59' and less than 79' inside length

6-59' and less than 79' inside length, cushion draft gear/underframe

7-79' and over, inside length

8-79' and over, inside length, cushion draft gear/underframe

9-Not Used

#### SECOND NUMERIC:

0-XM-Sliding doors, inside width less than 9'06"

1-XM-Sliding door, inside width 9'06" & over

2-XM-Plug doors, inside width, less than 9'06"

3-XM-Plug doors, inside width 9'06" & over

4-XM-Combination (sliding-plug) doors, inside width less than 9'06"

5-XM-Combination (sliding-plug) doors, inside width 9'06" & over

6-XM-Other door, any width

7- Not Used

8-XMI-Inside width 9'06" and over

9-Not Used

#### THIRD NUMERIC:

0-Other type door/opening

1-Side Door Width less than 8' opening

2-Doors 8' less than 9' opening

3-Doors 9' less than 10' opening

4-Doors 10' less than 11' opening 5-Doors 11' less than 13' opening

6-Doors 13' less than 15' opening

7-Doors 15' & over opening

8, 9-Not Used

XM-Box car for general service equipped with side or side and end doors.

## Covered Hopper Cars ETC C\_\_\_

#### FIRST NUMERIC:

0-Not Used

1-Gravity Unloading-non-pressurized gravity unloading.

2-Pneumatic Unloading-non-pressurized, for unloading by means of vacuum or suction equipment with receiver's facilities without capability of gravity discharge into a hopper.

3–Gravity-Pneumatic Unloading-non-pressurized car with capabilities either for unloading by means of vacuum or suction in conjunction with receiver's facilities or operation as a straight gravity mode.

4-Fluidized-Gravity Unloading-Air fluidization to expedite unloading; nonpressurized except in fluidization chambers, with gravity outlet.

5-Fluidized = Pneumatic Unloading-Air Fluidization to expedite unloading; non-pressurized except in fluidization chambers, with means for unloading by means of vacuum or suction in conjunction with receiver's facilities.

6-Pressure Differential-Car body pressurized to 5 psi. or greater, with or without supplementary fluidization; discharge through pneumatic pipes.

7–Other Unloading Systems–Any discharge system not defined by 1 through 6 above.

8, 9-Not Used

#### SECOND NUMERIC:

0-Not Used

1-LO (Covered Hopper)

2 through 9-Not Used

#### THIRD NUMERIC:

0-Not Used

1-Less than 3,000 cu. ft. capacity

2-3,000 but less than 4,000 cu. ft. capacity

3-4,000 but less than 5,000 cu. ft. capacity

4-5,000 cu. ft. capacity and over

5 through 9-Not Used

LO-A permanently enclosed car, other than a box car, regardless of exterior or interior shape, for handling bulk commodities, with or without insulation and provided with openings for loading through top or sides with weathertight covers or doors. Car may be provided with one or more bottom openings for unloading, with tight fitting covers, doors, valves, or tight fitting slide or gate to prevent leakage of lading. Car may be provided with facilities for discharge of lading through openings in top or sides and may have one or more compartments. Mechanical or other means may be provided within car to expedite loading or unloading.

### Locomotives ETC D\_\_\_

#### FIRST NUMERIC:

0-Not Used

- 1-Freight Locomotive
- 2-Passenger Locomotive
- 3-Switching Locomotive
- 4-Non-Cab Freight Locomotive
- 5-Non-Cab Passenger Locomotive
- 6-Auxiliary Unit (Includes slugs, boosters, etc., which draw their power from the"mother" unit.
- 7-Electric
- 8, 9-Not Used

#### SECOND NUMERIC:

0-Not Used

- 1-AAR Truck type 'B-B'...4 powered axles
- 2-AAR Truck type 'C-C'...6 powered axles
- 3-AAR Truck type 'D-D'...8 powered axles
- 4-AAR Truck type 'A1A-A1A'...4 powered axles
- 5-AAR Truck type 'B-C'...5 powered axles
- 6-More than 8 powered axles
- 7-Less than 9 powered axles with a different configuration than 1 through 5
- 8, 9-Not Used

#### THIRD NUMERIC:

0-Less than 1000 hp

- 1-1000 to 1499 hp
- 2-1500 to 1999 hp
- 3-2000 to 2499 hp
- 4-2500 to 2999 hp
- 5-3000 to 3499 hp
- 6-3500 to 3999 hp 7-4000 to 4499 hp
- 8-4500 to 4999 hp
- 9-5000 and over

## Equipped Gondolas ETC E\_\_\_

#### FIRST NUMERIC:

0-Not Used

- 1-Less than 48' inside length
- 2-Less than 48' inside length with cushion draft gear/underframe
- 3-48' and less than 52' inside length
- 4-48' and less than 52' inside length with cushion draft gear/underframe
- 5-52' and less than 61' inside length
- 6-52' and less than 61' inside length with cushion draft gear/underframe
- 7-61' and over inside length
- 8-61' and over inside length with cushion draft gear/underframe

7 through 9-Not Used

FB–Bulkhead flat cars equipped with fixed or permanently attached movable bulkheads or ends a minimum of three feet in height and flat floor for general commodity loading.

FBC—Flat car constructed with a center beam above the car deck from bulkhead to bulkhead.

FD–Depressed center flat car of special construction having the portion of floor extending between trucks depressed to provide necessary overhead clearance for lading.

FDC—Flat car, constructed with a center beam above the deck from bulkhead to bulkhead and having the portion of the floor extending between trucks depressed to provide additional volume capacity.

FL—Flat car with or without straight deck consisting of two trucks fitted with cross supports over truck bolsters; the trucks are connected with a skeleton or flexible frame or solid underframe fitted with supports for transporting lading loaded lengthwise, e.g., logs, pipes, slab steel.

FM–Flat car with straight deck or platform with flooring over sills and without sides, end risers or bulkheads.

FW–Flat car with an opening in the deck to allow lading to be lowered to accommodate clearance restrictions.

NOTE: Where cars are specially modified or equipped for handling particular commodities, the letter "S" must be affixed to the applicable designating letters. Such special equipment must be reported in the fitting code field in the Umler file. This would not apply to cars with "FA", "FD", "FL", or "FW" designation.

THIRD NUMERIC - Inside Height - Load Limit:

0 – 12" to 167" – 154,999 and less

1 – 12" to 46" – 155,000 to 184,999

2 - 47" to 167" - 155,000 to 184,999

3 - 12" to 46" - 185,000 to 204,999

4 – 47" to 52" – 185,000 to 204,999

5 – 53" to 58" – 185,000 to 204,999

6 - 59" to 64" - 185,000 to 204,999

7 - 65" to 167" - 185,000 to 204,999

8 - 12" to 59" - 205,000 and greater

9 - 60" to 167" - 205,000 and greater

GB-Open top car, having fixed sides, fixed or drop ends and solid bottom or swinging side doors to enable dumping.

GS—Open top car, having fixed sides and ends and drop bottom, consisting of doors hinged at center sills or side sills to dump outside and/or inside of rails.

GW—Open top well-hole car for transportation of special commodities. A solid bottom car with fixed sides and ends, having one or more openings or depressions provided in floor, permitting the lading to be lowered in order to obtain overhead clearance.

9-Not Used

LC–Box car with side doors and roof hatches. May be equipped with end

LF–Flat car equipped to handle one or more demountable containers for the transportation of commodities not qualified for TOFC/COFC service.

NOTE: Not applicable to flat cars designed to handle containers in TOFC/COFC service or containers handling setup vehicles.

LG–Gondola car equipped to handle one or more demountable containers for the transportation of commodities not under refrigeration.

LM—A car equipped with one or more permanently enclosed tanks or containers, provided with one or more openings for loading and equipped for pneumatic or gravity unloading. Car is suitable for handling certain dry powered or granular commodities, and also low viscosity, non-dangerous liquid commodities.

LP—Open-Top car having solid bottom and fixed ends equipped with sloping floor or longitudinal floor risers or side-stakes for the handling of pulpwood and not suitable for general commodity loading.

LS—A car of special construction having two separable interlocking units which form a car body. Units may be separated and load interposed between and locked in place to form a complete transportation unit.

LU—An enclosed with roof, having a special metal beam of heavy design at top of each side to support a series of retractable overhead side doors and their appurtenances, or other types of doors, running substantially the length of car, which beams also support the roof details. Car may be equipped with special loading devices or racks for handling various commodities.

97—NF (SBT) Two way sensor Brake Unit/End-of-Train - Format G. A device mounted on the trailing coupler on the rear car of the train coupled to the brake pipe. The SBT senses brake-pipe pressure, and may sense motion and direction. This information is relayed by radio to the head end of the train to a RDU, CDU, or a CLU/IDU combination. In addition, the SBT acts as a marker to indicate the rear of the train and IS equipped with an emergency braking feature to be used in the event of a loss of the normal braking capability from the head end of the train.

#### THIRD NUMERIC:

0-All units

1 through 9-Not Used

Grass Cutter—A car equipped with machinery for propelling itself, or otherwise and cutting grass along the track as it proceeds.

MS-Scale Car-Cars used to test railroad track sales.

MT-Training unit equipped with training aids or modified to demonstrate components of the unit.

MWB–Ballast Cars. A car used to carry ballast for laying new right of way and repairs. The car used generally for this work is of the gondola type, with side or center dump.

MWDC-Ditching Car. A car equipped for excavating ditches along the sides of tracks as it proceeds, self-propelled or not.

MWD–Dump Cars. Type of contractor's car used for building up fills; the body of the car dumps being raised by means of counterweight (air or hand power) for dumping.

MWE–Ballast Spreader and Trimmer. A car with blades or wings for spreading or trimming ballast.

MWF–Flat Car. Used for transporting rails, ties or ballast and for storage of wrecking trucks or gathering scraps along right of way. These cars are at times equipped with low sides, about 10 or 12 inches high.

MWGN-Gondola used specifically in Maintenance-of-Way service.

MWG–Section Gang or Track Inspection Car. Flat car with or without seats or tool boxes, and equipped with single or double cylinder gasoline engine serving as motive power.

MWH-Hopper (open top or covered) used specifically in Maintenance-of-Way service.

MWIF-IFlat used specifically in Maintenance-of-Way service.

MWK–Snow-removing Car. A car equipped with any special device for removing snow from between or alongside of rails.

MW-Miscellaneous (Otherwise not classified).

MWM–Store-Supply Car. A box car used for handling material or storing tools, blocking or other material for railway use.

MWP-Pile Driver. A car equipped with machinery for pile driving.

MWRC—Unit equipped to receive and transmit radio signals via multiple-unit connections to coupled locomotive for remote control operation.

MWSP–Shoving platform consists of a car equipped with hand safety rails and a shelter where a train crew can guide a train in a reverse or shoving operation.

MWS–Steam Shovel. A car equipped with powered boom, the end of which is a shovel or scoop. Because it is equipped with safety appliances, it may be propelled by its own power or by means of a locomotive and be run as a car in freight trains. The cubic capacity of the shovels (in yards) can be indicated following the classification letters (for example, MWS 6 yards).

MWTK–Similar in design to "T", but used specifically in Maintenance-of-Way service.

MWVF-VFlat used specifically in Maintenance-of-Way service.

MWW–Wrecking Derrick. A derrick used for wrecking purposes equipped with an engine housed on a separate platform to raise and lower booms and hoists.

The separate platform and the attached boom are pivoted in the center of the car. A derrick is usually fitted with outrigger beams to stabilize the car for heavy lifting. Derricks are usually propelled by means of a locomotive, but can be equipped with self-propulsion equipment for traveling short distances. Lifting capacity (in tons) is clearly marked.

MWX–Boarding Outfit Car. A car used for boarding, sleeping or cooking purposes in construction and similar work.

NE-All cabooses.

NF–A device mounted on the trailing coupler on the rear car of the train coupled to the brake pipe. The SBT senses brake pipe pressure, and may sense motion and direction. This information is relayed by radio to the head end of the train to a RDU, CDU or a CLU/IDU combination. In addition, the SBT acts as a marker to indicate the rear of the train and is equipped with an emergency braking feature to be used in the event of a loss of the normal braking capability from the head end of the train.

PAB—Car equipped to handle passengers and equipped to handle baggage, express mail, merchandise or similar products.

PA-Car equipped to handle passengers.

PB–A car constructed for passenger train service and equipped to handle baggage, express, mail, merchandise or similar products.

PD-Car equipped for food or beverage service.

PS—Company service car, including office cars, instruction cars, display cars, etc.

PSD—Company service car (including office, instruction, display, etc. equipped for food and/or beverage service.

Rail Bender–A car equipped with machinery for bending track rails and similar material.

Rail Saw–A car equipped with machinery for sawing track rails and similar material.

Track Layer—A car equipped with machinery for propelling itself, or otherwise, and laying the track ahead of it as it proceeds.

Weed Exterminator—A car equipped with machinery for propelling itself, or otherwise, and burning or spraying weeds along the track as it proceeds.

- 2-Circus, equipped for portable bridge plates, and Lift On/Lift Off-TOFC Only
- 3-Lift On/Lift Off Only-TOFC Only
- 4-Circus and Lift On/Lift Off-All Purpose (TOFC and COFC)
- 5–Circus, equipped for portable bridge plates, and Lift On/Lift Off–All Purpose (With Stub Bridge Plates)
- 6–Circus, equipped for portable bridge plates, and Lift On/Lift Off–All Purpose (No Stub Bridge Plates)
- 7-Lift On/Lift Off Only-All Purpose
- 8-Lift On/Lift Off Only-COFC Only
- 9-Not Used

#### THIRD NUMERIC (See NOTE 3):

## If First Numeric is 1 through 4 and Second Numeric is 1, 2, or 3, then, 0–Cars otherwise not classified–contact car owner

- 1-Trailer up to 40' long
- 2-Trailer up to 45' long
- 3-Trailer up to 48' long
- 4-Trailer up to 50' long
- 5-Trailer up to 53' long
- 6-Trailer up to 57' long
- 7 through 9-Not Used

## If First Numeric is 1 through 4 and Second Numeric is 4 through 7, then, Third Numeric (TOFC/COFC) is:

0-All cars

1 through 9-Not Used

## If First Numeric is 1 through 4 and Second Numeric is 8, then, (See NOTE 5) O—Cars not otherwise classified—contact car owner

- 1-1-40' and 1-20' container or 3-20' containers
- 2-1-40' or 1-40' 03" container
- 3 through 9-Not Used

#### If First Numeric is 5 through 9 and Second Numeric is 1, 2, or 3, then,

- 0-Cars not otherwise classified, contact owner
- 1–2-40' trailers with or without nose mounted reefers (If 1st Numeric equals 9, car will not handle nose mounted reefers).
- 2–1-40' trailer without and 1-45' trailer with nose mounted reefer, or 2-40' trailers with nose mounted reefer.
- 3-2-45' trailers (see NOTE 4)
- 4-Any two trailers with aggregate length up to 90'.
- 5–1-40' trailer without and 1-45' trailer with nose mounted reefer, or 3-28' "Pups" or 2-40' trailers with nose mounted reefer.
- 6–Any two trailers with aggregate length up to 90' or 3-28' Pups.
- 7 through 9-Not Used

## If First Numeric is 5 through 9 and Second Numeric is 4 through 7 (All Purpose) then,

- 0-Cars not otherwise classified-contact car owner
- 1—Trailers and/or containers as follows 1-40' trailer without and 1-45' trailer with nose mounted reefer, or 2-40' trailers with nose mounted reefer, or various combinations of 20' and 40' containers and/or trailers, or 1-45' container with one other container up to 35' long.
- 2—Trailers and/or containers as follows 2-45' trailers without nose mounted reefers or various combinations of 20' and 40' containers and/or trailers, or 1-45' container with one other container up to 35' long. (See NOTE 4) 3 through 9–Not Used

## If First Numeric is 5 through 9 and Second Numeric is 8 (COFC Only) then, (See NOTE 5)

0-Cars not otherwise classified-contact car owner

- 1-1-40' and 1-20' or 3-20' containers.
- 2-1-40' or 1-40' 3" container.
- 3–2-40' or 4-20' containers and various combinations or 1-45' container with one other container up to 35' long.
- 4 through 9-Not Used
- NOTE 1: "Single Length" car will handle one unit at least 40' long. (Car will generally be 50'-75' long). "Double Length" car will handle two units at least 40' long. (Car will generally be 85'-89'4" long).
- NOTE 2: "Low Level" is 2'9" or less ATR. "Standard Level" is 3'4" inches ATR or over.
- NOTE 3: Although other king pin settings may be acceptable, trailer handling capabilities assume trailer king pin settings of 36".
- NOTE 4: These cars will also handle 40' or 45' trailers with nose mounted reefer units at the "A" position (middle) hitch provided the "B" position (leading) hitch is carrying a 40' or shorter trailer. In no case will the "B" position hitch handle a trailer with nose mounted reefer regardless of the length of the trailer.
- NOTE 5: These cars will not handle containers more than 8'0" wide. FC–Flat cars, specifically equipped to carry trailers, containers, and chassis in TOFC/COFC service.

## Lighter Weight Intermodal ETC Q\_\_\_

#### LOW PROFILE INTERMODAL CARS

Mechanical Designation "FC" – If Less than 33M Pounds or "FCA" Articulated and Multi-Platform Cars or Steel Wheel Railsets for Car-less Technology (See NOTES 1 through 6 below)

#### FIRST NUMERIC:

- 0-Not Used
- 1-Trailers Only
- 2-Containers Only-8' wide-Single tier
- 3-Containers Only-8 1/2' wide-Single tier
- 4–Containers Only–8' or 8 1/2' wide–Single tier
- 5–Trailers or 8' wide containers
- 6-Trailers or 8 1/2' wide containers
- 7-Trailers or 8' or 8 1/2' wide containers
- 8–Steel wheel railsets for car-less technology (See NOTE 4)
- 9–Integrated multi-platform unit, trailers-containers various dimensions

#### SECOND NUMERIC (See NOTE 4):

- 1-1 Platform FC
- 2-2 Platforms FCA
- 3-3 Platforms FCA
- 4–4 Platforms FCA
- 5-5 Platforms FCA
- 6-6 Platforms FCA
- 7–7 Platforms FCA
- 8-8 Platforms FCA
- 9–9 Platforms FCA
- 0–10 or more Platforms FCA

#### THIRD NUMERIC-If First Numeric is 1 (See NOTES 5 and 6):

- 0-Cars not otherwise classified-contact car owner
- 1-One 40'-45' trailer per platform
- 2-One 40'-48' trailer per platform
- 3-One 40'-53' trailer per platform
- 4-One 40'-57' trailer per platform
- 5—One 40'-45' trailer per platform with nose mounted reefer units on trailers on A and B platforms Only.
- 6-One 28'-48' trailer per platform
- 7—Four trailers up to 45' long, without nose-mounted reefer units per car; or three trailers, up to 56' long per car, where the center trailer must be 48' long or longer and Only the center trailer may be equipped with nose-mounted reefer unit and/or 42" king pin settings (deck height is 3'6" ATR).
- 8—Three trailers up to 56' long per car, with up to 42" king pin settings and/or nose-mounted reefer units per car. The center trailer must be 48' long or longer (deck height is 3'6" ATR).
- 9-Not Used

#### THIRD NUMERIC-If First Numeric is 2, 3 or 4:

- 0-Cars not otherwise classified-contact car owner
- 1–Two 20' or one 40', 45' or 48' by 96" by 96" or 102" container(s) on A, B, and D platforms and one 40', 45' or 48' by 96" or 102" container on C and E platforms.
- $2\hbox{--Two}~20^{\circ}$  or one 40', 45' or 48' by 96" or 102" container(s) on all platforms.
- 3 through 9-Not Used

#### THIRD NUMERIC-If First Numeric is 5, 6 or 7:

- 0-Cars not otherwise classified-contact car owner
- 1—One 28' through 48' trailer on all platforms or one 40' through 48' by 96" or 102" container on all platforms, or two 20' by 96" or 102" containers on A and B platforms Only.
- 2–One 28' through 53' trailer on all platforms or one 40' through 53' by 96" or 102" container on all platforms, or two 20' by 96" or 102" containers on A and B platforms Only.
- 3-1-28', 1-40', 1-45', 1-48', 1-53' Trailer or 1-40', 1-45', 1-48', 1-53' Container on each segment.
- 4- Two 28' trailers, or One 40' or One 45' or One 48' or One 53' or One 57' trailer on all platforms, or One 40' or One 45' or One 48' or One 53' 96" or 102" container on all platforms
- 5 through 9-Not Used.

#### THIRD NUMERIC-If First Numeric is 8:

- 0-Bogey equipped with rail coupler
- 1-Bogey single air line with rail coupler
- 2-Bogey double air line with rail coupler
- 3-Intermediate Connector without rail coupler
- 4 through 9-Not Used
- NOTE 1: All "Q" class cars have a deck height of 2'8" ATR or less, unless otherwise indicated.
- NOTE 2: All "Q" class cars are suitable Only for Lift-On/Lift-Off terminal handling (no bridge plates and non-retractable hitches).
- NOTE 3: All "Q" class cars will handle trailers with tandem wheels up to 102" wide.
- NOTE 4: Multiples of two or more platforms are either fully articulated or are semi-permanently coupled together and cannot be separated except at a repair track. A "platform" is capable of carrying a trailer or container at least 40' long or two 20' containers. If 1st numeric is 8 (Steel wheel sets for carless technology) 2nd numeric must be a 1.
- NOTE 5: Although other king pin settings may be acceptable, trailer handling capabilities are based on a trailer king pin setting of 36".
- NOTE 6: All "Q" class cars with TOFC capability will handle trailers of the length indicated, plus nose mounted refrigeration units, unless otherwise indicated.
- FCA—Flat car, articulated or drawbar connected multi-unit, specially equipped for transporting containers, chassis, and trailers in TOFC/COFC service.

- 1-Body fiberglass, reinforced composite
- 2 through 9-Not Used
- RB—Bunkerless refrigerator car with or without ventilating devices and with or without device for attaching portable heaters. Constructed with insulation in side ends, floor and roof to meet maximum UA factor requirement of 250 BTU/F/Hour for 50 foot cars and 300 BTU/F/Hour for 60 foot cars. Effective for cars ordered new after March 1, 1984.
- NOTE: Cars built or rebuilt prior to March 1, 1984, must have been constructed with a minimum of 3 in. of insulation in the sides and ends and 3-1/2 in. in floor and roof based on the insulation requirements given in the AAR Manual of Standards and Recommended Practices, Section C, Recommended Practice RP-253 or a thickness reduced in proportion to the thermal conductivity of the insulation.
- RBL—Car similar in construction to an "RB" type car, but equipped in addition with adjustable loading or stowing device.
- NOTE: Cars equipped with interior side rails only, built new, rebuilt or reclassified on and after January 1, 1966, in order to qualify for the "RBL" designation, shall have a minimum of four (4) usable side rails on each wall of car, each extending from doorway to approximately four (4) feet from end of car.
- RC-Refrigerator Car similar to an "RB" car using a cryogen to produce temperatures to transport frozen commodities.
- RP–Mechanical Refrigerator car equipped with or without means of ventilation and provided with apparatus for furnishing protection against heat and/or cold.
- RPL—Mechanical Refrigerator. Similar to "RP" but equipped in addition with adjustable loading or stowing device.

## Stack Cars ETC S\_\_\_

Well Cars-COFC/TOFC Capable of Carrying Double Stacked Containers

#### FIRST NUMERIC:

- 0-Cars not otherwise classified-contact car owner
- 1-All 40' Wells
- 2-All 45' Wells
- 3-All 48' Wells
- 4-40' end and 45' Intermediate Wells
- 5-40' end and 48' Intermediate Wells
- 6-All 53' Wells
- 7-All 56' Wells
- 8, 9-Not Used

## **Umler**<sup>®</sup>

#### **Data Specification Manual**

#### SECOND NUMERIC:

- 0-Cars not otherwise classified-contact car owner
- 1-Single Well IBC Type -FC
- 2-Two Wells IBC Type -FCA
- 3-Three Wells IBC Type -FCA
- 4-Four Wells IBC Type -FCA
- 5-Five Wells IBC Type -Light Capacity (100 Ton Trucks) FCA
- 6-Five Wells IBC Type Heavy Capacity (125 Ton Trucks) FCA
- 7-Five Wells Bulkhead Type Light Capacity (100 Ton Trucks) FCA
- 8-Five Wells Bulkhead Type Heavy Capacity (125 Ton Trucks) FCA
- 9-Not Used

#### THIRD NUMERIC-If Second Numeric is 1, 2, 3, or 4:

- 0-Car classifiable in ETC, see element Single Length Loading Configuration (B288) for loading configuration
- 1-1-40', 45', or 48' container in well and 1-40, 45', 48', or 53' container stacked on top of well.
- 2-2-20', 1-40', 45', or 48' container in well and 1-40', 45', 48', or 53' container stacked on top of well.
- 3-2-20', 1-40', 45', or 48' container in well and 1-40', 48', or 53' container stacked on top of well or 2-28' trailers or 1-40' through 53' trailer in well. Trailers can be either 96" or 102" wide and can be equipped with nosemounted refrigerator units.
- 4-2-20' or 28' containers or 1-40', 45', 48', or 53' container in well and 2-28' containers, 1-40', 45', 48' or 53' container stacked on top of well
- 5-2-20', 1-40', 45', 48' or 53' container in well and 1-40', 45', 48', or 53' (see NOTE 5) container stacked on top of well.
- 6-Container only, Bottom: 2-20' or 1-40'; Top: 1-40', 45', 48', or 53'
- 7-Container only, Bottom: 2-20' or 1-40'; Top: 1-40', 45', 48', or 53'; 53' container can be loaded on the A and B unit, if the C unit has a 40' or 45' container loaded on it.
- 8-Container and Trailer capability, Bottom: 2-20' or 1-40' container or 1-28' trailer; Top: 1-40', 45', or 48' container; 53' container can be loaded in the A and B units if the C unit has a 40' container.
- 9-Container capability, Bottom: 2-20', 1-40', 45', 48', or 53' container; Top: 1-40', 45', 48', or 53' container. Trailer: 2-28', 1-40', 1-45', 1-48', 1-53', or 1-57'.

#### THIRD NUMERIC-If Second Numeric is 5 or 6:

- 0-Car classifiable in ETC, see element Single Length Loading Configuration (B288) for loading configuration
- 1-2-20' or 1-40' container(s) in end wells and 1-40' container only in intermediate wells with 1-40', 45' or 48' container stacked on top of all wells.
- 2-2-20' or 1-40' container(s) in all wells and 1-40', 45', or 48' container stacked on top of all wells.
- 3-1-40' or 45' container in all wells and 1-40', 45', 48', or 53' container stacked on top of all wells.
- 4-1-40', 45' or 48' container in all wells and 1-40', 45', 48', or 53' container stacked on top of all wells.
- 5-2-20' or 1-40' container(s) in end wells and 1-40' or 45' container in intermediate wells with 1-40', 45', or 48' container stacked on top of all wells and 53' containers stacked only on top of intermediate wells.
- 6-2-20' or 1-40' container(s) in end wells and 1-40', 45', or 48' container in intermediate wells with 1-40', 45' or 48' container stacked on top of all wells and 53' containers stacked only on top of intermediate wells.
- 7-2-20', 2-24', 1-40', 1-45', or 1-48' container(s) in all wells with 1-40', 1-45', 1-48', or 1-53' container stacked on top of all wells.
- 8-2-20', 24', 1-40', 1-45', or 1-48' container(s) in the end wells and 1-40', 1-45', or 1-48' container in the intermediate wells with 1-40', 1-45', 1-48', or 1-53' stacked on top of all wells.
- 9-Container only, Bottom: 2-20' or 1-40'; Top:1-40', 45', or 48'; a 53' container can be loaded on the A, B and D units if the C and E unit as a 40' container.

#### THIRD NUMERIC-If Second Numeric is 7 or 8:

0-Car classifiable in ETC, see element Single Length Loading Configuration (B288) for loading configuration

- 1-2-20' or 1-40' container(s) in end wells and 40' containers only in intermediate wells with 40' or 48' containers stacked on top of all wells.
- 2-2-20' or 1-40' container(s) in end wells and 40' containers only in intermediate wells with 40', 45', or 48' containers stacked on top of all wells.
- 3-2-20' or 1-40' container(s) in end wells and 40' containers only in intermediate wells with 40' containers stacked on end wells and 40' or 45' containers stacked on intermediate wells.
- 4-2-20' or 1-40' container(s) in all wells with 40' or 48' containers stacked on top of all wells.
- 5-2-20' or 1-40' container(s) in all wells with 40', 45', or 48' containers stacked on top of all wells.
- 6-1-40' container only in end wells and 2-20' or 1-40' container(s) in intermediate wells with 40' or 48' containers stacked on top of all wells.
- 7-1-40' container only in end wells and 2-20' or 1-40' container(s) in intermediate wells with 40', 45', or 48' containers stacked on top of all wells.
- 8-1-40' container in all wells with 1-40' or 1-45' container stacked on top of all wells.
- 9-2-20' or 1-40' container(s) in all wells with 1-40' or 1-45' container stacked on top of all wells.

### Tank Cars ETC T

FIRST AND SECOND NUMERIC: Major Class Description (See Appendix N:)

THIRD NUMERIC:

0-Capacity not applicable

1-7,000 gal. and less capacity

2-8,000 through 9,000 gallons capacity

3-10,000 through 11,000 gallons capacity

4-12,000 through 18,000 gallons capacity

5-19,000 through 21,000 gallons capacity 6-22,000 through 24,000 gallons capacity

7-25,000 through 27,000 gallons capacity

8-28,000 through 31,000 gallons capacity

9-32,000 gallons capacity and over

For the purpose of determining capacity for coding, the following is used:

6,500 to 7,499 gallons—show as 7,000 gallons capacity

7,500 to 8,499 gallons—show as 8,000 gallons capacity

8,500 to 9,499 gallons—show as 9,000 gallons capacity, etc.

- T-Tank Car. Tank car means any car which is used only for the transportation of liquids, liquefied gases, compressed gases, or solids that are liquefied prior to unloading. Car may be without underframe if container serving as superstructure is designed to serve as underframe. If car has underframe, it must be designed only for the carriage of one or more enclosed containers (with or without compartments) that form the superstructure and are integral parts of the car. All such containers must be securely attached to the underframe when offered for transportation but may have demountable features. Before any car can be considered a tank car hereunder, the design of all such containers thereon must have been approved 1) by the AAR Committee on Tank Cars as having met all applicable AAR specifications and requirements and 2) by said Committee or, in appropriate cases, the Department of Transportation, as having met all applicable specifications and requirements of Subpart I of the Regulations for Transportation of Explosives and Other Dangerous Articles.
- NOTE: For a listing of all tank car specification, refer to the AAR Manual of Standards and Recommended Practices, Section C, Specification M-1002, Specification for Tank Cars and/or Field Manual of AAR Interchange Rules.

## Containers ETC U

FIRST NUMERIC:

0-Bulk Hopper

1-Not Used

2-General Service (Non-equipped Dry Vans)

- 3-Flat Racks
- 4-Open Tops
- 5-Mechanical Refrigerator
- 6-Tank
- 7-Insulated
- 8-Not Used
- 9-Special Equipped Straight Floor Closed

#### SECOND NUMERIC:

- 0-40 ft. and less than 42 ft., outside length
- 1-Less than 20 ft., outside length

- 3-27 ft. and less than 35 ft., outside length
- 4-35 ft. and less than 40 ft., outside length
- 5-45 ft. and less than 48 ft., outside length
- 6-42 ft. and less than 45 ft., outside length
- 7-48 ft. and less than 53 ft., outside length
- 8-53 ft. and less than 57 ft., outside length
- 9-57 ft. and over, outside length

#### THIRD NUMERIC:

- 0-Container not otherwise classified, contact owner
- 1-O.S. Width 8' and under, Outside Height 8'6" and under
- 2-O.S. Width 8' and under, Outside Height over 8'6" and to 9' inclusive
- 3–O.S. Width 8' and under, Outside Height over 9' and to 9'6" inclusive
- 4–O.S. Width 8' and under, Outside Height over 9'6"
- 5-O.S. Width over 8', Outside Height 8'6" and under
- 6-O.S. Width over 8', Outside Height over 8'6" and to 9' inclusive
- 7–O.S. Width over 8', Outside Height over 9' and to 9'6" inclusive
- 8-O.S. Width over 8', Outside Height over 9'6"
- 9-Not Used

### Vehicular Flat Cars ETC V\_\_\_

#### (FA ONLY)

#### FIRST NUMERIC:

- 0-Uni-level rack, single unit, fully enclosed with doors and roof
- 1–Tri-level rack, multiple unit, fully enclosed with doors and roof
- 2–Tri-level rack, articulated, fully enclosed with doors and roof
- 3–Tri-level rack, single unit, non-fully enclosed (includes non-side-shielded, roof but no doors, doors but no roof)
- 4-Tri-level rack, single unit, fully enclosed with doors and roof
- 5-Not used
- 6-Bi-level rack, multiple unit, fully enclosed with doors and roof
- 7-Bi-level rack, articulated, fully enclosed with doors and roof
- 8–Bi-level rack, single unit, non-fully enclosed (includes non-side-shielded, side-shielded, roof but no doors, doors but no roof)
- 9-Bi-level rack, single unit, fully enclosed with doors and roof
- NOTE: Articulated = Articulated Connector at Intermediate Connection.

  Multiple Unit = Solid Drawbar at Intermediate Connection.

#### SECOND NUMERIC:

- 0-Low level, extreme height less than 18'10"
- 1-Low level, extreme height 18'10" and less than 19'01"
- 2-Low level, extreme length 19'01" and less than 20'02"
- 3-Mid level, extreme height less than 18'10"
- 4-Mid level, extreme height 18'10" and less than 19'01"
- 5-Mid level, extreme height 19'01" and less than 20'02"
- 6-High level, extreme height less than 18'10"
- 7-High level, extreme height 18'10" and less than 19'01"
- 8-High level, extreme height 19'01" and less than 20'02"
- 9-Any level, extreme height 20'02" and greater
- NOTE: Platform heights ATR are defined: Low level = less than 34"; Mid level = 34" and less than 40"; High level is 40" and greater.

#### THIRD NUMERIC:

- 0-No doors
- 1-Full height, Radial
- 2-Full height, RAVE, Trinity
- 3-Full height, RAVE, Portec
- 4-Full height, Tri-Arc
- 5-Full height, Tri-Fold
- 6-Full height, Pick
- 7-Full height, All other (including Bi-Fold, Three Piece, Wire Mesh, etc.)
- 8-Full height, Seal Safe Radial
- 9–Partial height, all (including Bi-Fold, Radial, Tri-Fold, Wire Mesh, etc.)
- FA—Flat car specifically equipped with a superstructure or the superstructure is an integral component of the car used for transporting set-up vehicles.

## Trailers ETC Z\_\_\_

#### FIRST NUMERIC

- 0-Bulk Hopper or Tank
- 1-Chassis (Refer to Second and Third Numeric under Chassis)
- 2-General Service (Non-equipped Dry Vans)
- 3-Flat Beds (includes removable sides, platforms and expandables)
- 4-Open Tops
- 5-Mechanical Refrigerators
- \*\* 6-Rail Compatible Unit
- 7-Insulated
- 8- Drop Frames (includes Wedge Frames)
- 9-Special Equipped Straight Floor Closed
- Note: ZO\_\_ must have Fitting Code "CN" for Tank.

#### SECOND NUMERIC: (Not For Z1\_\_ or Z6\_\_)

- 0-40 ft. and less than 42 ft., outside length
- 1-Less than 20 ft., outside length
- 2-20 ft. and less than 27 ft., outside length
- 3-27 ft. and less than 35 ft., outside length
- 4-35 ft. and less than 40 ft., outside length
- 5–45 ft. and less than 48 ft., outside length
- 6–42 ft. and less than 45 ft., outside length
- 7–48 ft. and less than 53 ft., outside length 8–53 ft. and less than 57 ft., outside length
- 9–57 ft. and over, outside length

#### \*\* SECOND NUMERIC (Z6 Only)

- 0-Not Used
- 1-Less than 48' Mark IV Type Van
- 2-48' and less than 53' Mark IV Type Van
- 3-53' and over Mark IV Type Van
- 4-Less than 48' Mark V Type Van
- 5–48' and less than 53' Mark V Type Van
- 6-53' and greater Mark V Type Van
- \* 7-Chassis less than 48', outside length
- \* 8-Chassis 48' and less than 53', outside length
- \* 9-Chassis 53' and over, outside length

NOTE: Use Chassis third numeric.

#### THIRD NUMERIC: (Not for Z1\_ and Z6\_ \_)

- 0-Trailer not otherwise classified, contact owner
- 1-O.S. Extreme Width 8' and under-Outside Height 12'6" and under
- 2-O.S. Extreme Width 8' and under-Outside Height over 12'6" and under 13'
- 3-O.S. Extreme Width 8' and under-Outside Height 13' and under 13'6"
- 4-O.S. Extreme Width 8' and under-Outside Height 13'6" and over
- 5–O.S. Extreme Width over 8'–Outside Height 13' and under–96" Wide Tandem
- 6–O.S. Extreme Width over 8'–Outside Height over 13'–96" Wide Tandem
- 7–O.S. Extreme Width over 8'–Outside Height 13' and under–over 96" Wide Tandem
- 8-O.S. Extreme Width over 8'-Outside Height over 13'-over 96" Wide Tandem

#### SECOND NUMERIC (Z1\_\_):

- 0-45 ft. to 53 ft. Extendible, outside length
- 1-40 ft. to 45 ft. Extendible, outside length
- 2-20 ft. Straight and 20/24 ft. Combo, outside length
- 3-48 ft. and over Straight, outside length
- 4-40 ft. to 53 ft. Extendible, outside length
- 5-45 ft. and less than 48 ft. Straight, outside length
- 6-40 ft. and less than 45 ft. Straight, outside length
- 7-40 ft. to 48 ft. Gooseneck, outside length
- 8-40 ft. Combo (20/40), outside length
- 9-40 ft. Tri-Purpose, outside length

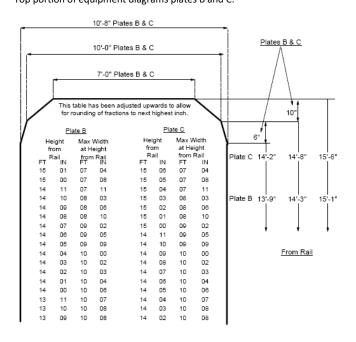

#### THIRD NUMERIC (Z1\_ and Z6\_ Only):

- 0-Chassis not otherwise classified, contact owner
- 1-O.S. Height 4'6" and under at locking plane, Tandem Width 96" or less
- 2–O.S. Height 4'6" and under at locking plane, Tandem Width over 96" to 102" inclusive
- 3-O.S. Height 4'6" and under at locking plane, Tandem Width over 102"
- 4-O.S. Height over 4'6" at locking plane, Tandem Width 96" or under
- 5–O.S. Height over 4'6" at locking plane, Tandem Width over 96" to 102" inclusive
- 6-O.S. Height over 4'6" locking plane, Tandem Width over 102"
- 7 through 9-Not Used

# Appendix J: Plate Codes (CLEARANCES)

Widths at one inch increments in height.

Top portion of equipment diagrams plates B and C.

# Widths at one inch increments in height. Top portion of equipment diagrams plates E and F FOR Umler EDITING CHECKS ONLY

FOR Umler EDITING CHECKS ONLY HOW TO USE the plate graphics:

The plate graphic's purpose is to determine if the outside height and width data furnished in your Umler record is within the Plate Clearance code reported. (e.g., clearance–B, Height From Rail to Extreme Width–1500, Extreme Width–0704; you would then find the height reported (1500) under Plate B in the above table.

Directly to the right of 1500 is the maximum width at that height, in this case 0708. Therefore, the Extreme Width reported of 0704 is within Plate B.)

In the event that the data reported for the Extreme Width in the above example was 0711, Extreme Width would be flagged in the error listing as follows: 0711.

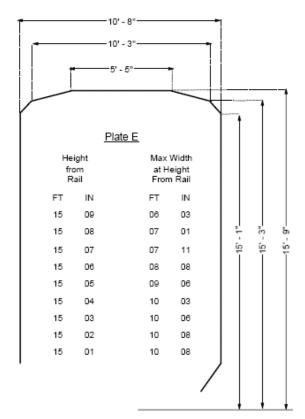

Relational errors (See Exhibit I1, Section IX), as in the above example, indicate one of the following could be wrong:

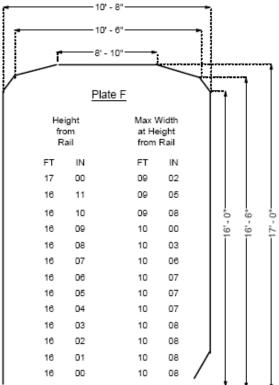

- a. 0711 Extreme Width is not correct. It was actually 0708 or less.
- 1500 height above rail to extreme width is not correct. It was actually 1411 or less.
- Clearance code B is incorrect, and the 2 dimensions are correct. The car is actually a Code C.

It will be the responsibility of the reporting party to resolve such errors with their mechanical department and submit the correct data.

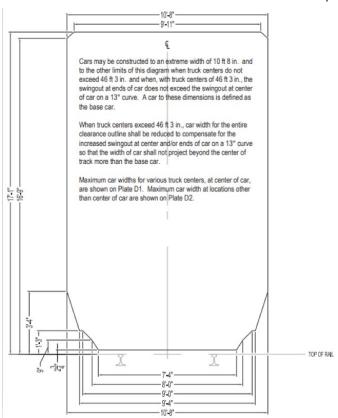

Dimensions in excess of Plate E or F, Report Clearance Code G Related Plate Code Data Elements;

- o A046 Plate Code
- o A187 Outside Height Extreme Width
- o A186 Outside Extreme Width
- o A185 Outside Extreme Height

= Affects Rating

# **Appendix K: Components**

In the Umler System, most data elements like Built Date only occur one time in the equipment record. There are some data elements that occur multiple times.

Component Groups in the Umler System identify data elements that repeat in an equipment record. For example, there are two couplers on most equipment records. Coupler information is recorded for each Draft System Component in the equipment record. Draft Systems are identified by a location ID. Location IDs follow the CRB convention for locations on equipment. Locations are identified starting from the Brake-End of Equipment or the Front using either letters or numbers.

**Data Specification Manual** 

Numeric Location Ids: 1,2,3,4,5,....

CRB conventions starting from the Brake End: B, C, D, E, F, ..., A (Brake-End to the A-End)

Locomotive convention starting from the Front: F, A, B, C, D, ..., R (Front to Rear)

### **Component Groups**

Draft Gear System – contains information related to Draft Gear and Couplers

Elements: Alignment Control Equipped, Coupler Code, Coupler Style

Location IDs: [B,A]

**Truck System** –Truck Systems are a component containing sub-components Axle Spacing and Trucks. Truck Systems locations are lettered starting with B (Brake End) and ending with A. Equipment with 4 Truck Systems would have locations [B,C,D,...,A]. (Except for locomotives which have locations starting with F (Front End) and ending with R (Rear End). Locomotives with 4 truck systems would have locations [F,A,B,...,R].

Axle Spacing – Axle Spacing Distance information for axles on the equipment. Axle Spacing Locations are numbered (1,2,3...) starting from the brake end.

Elements: Axle Spacing Distance

Location IDs: [1,2,3,4,...]

Truck – information related to equipment trucks.

Elements: Journal Size, Locomotive Truck Type, Stability Device Equipped, Truck Axle Count, Wheel Diameter

Location IDs: [B,C,D,...,A] ([F,A,B,...,R] for Locos)

*Hitch* – Intermodal Trailer connections locations. These locations are identified numerically from the B-End to the A-End of the equipment.

Elements: Intermodal Flat King Pin Opening Orientation, Intermodal Flat King Pin Setting Inches, Trailer Hitch System

Capacity

Location IDs: [1,2,3,4,...]

Intermediate Connection – locations where trailers can be loaded across two intermodal flatcars are identified numerically from the B-End to the A-End.

Elements: Bridging Allowable Load Length, Intermediate Truck Car Builder Load Limit

Location IDs: [1,2,3,4,...]

**Unit Segment** – connected units (articulated or drawbar) have information regarding each platform. In addition to the data on the platforms, there is also information regarding the Loading capabilities of the platforms/units. Each Unit Segment is identified by location beginning at the B-End and ending at the A-End. 3-unit cars [B,C,A]. 5-Unit cars [B,C,D,E,A]. In addition to elements associated to each unit segment, there are also two sub-components; 1) Inter-Container Securement, and 2) Loading Capabilities.

Elements: Air Receptacle Equipped, Car Load Limit, COFC/TOFC/All Purpose/Environment Containers, Electrical Receptacle Equipped, Fuel Receptacle Equipped, Intermodal Flat Loading Method Circus, Intermodal Flat Loading Method LOLO, Intermodal Flat Loading Method Side, Loading Plane Height (Containers) Above Rail, Loading Plane Height (Trailer) Above Rail, Lock/Cone Profile, Lower Position Clearance, Lower Position Clearance Outline, Number of Handbrakes, Number of Hitches per unit, Permanent / Temp Receptacle, Side Wall Height, Side Wall Height from Cone, TOFC Width, Between Exterior Rub Rails, TOFC Width Between Interior Rub Rails, Unit Builders Load Limit, Unit Container Loading Capacity, Unit Cubic Feet Capacity, Unit Equipment Group, Unit Inside Length, Unit Load Limit, Unit Load Limit (COFC), Unit Load Limit (TOFC), Unit Load Limit Star Code, Unit Tare Weight, Unit Trailer Loading Capacity, Upper Position Clearance

Location IDs: [B,C,D,...,A]

Inter Container – locations that describe specific securement capabilities of containers

Elements: Inter-Container Securement

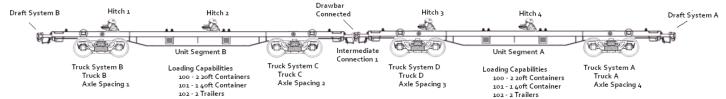

Location IDs: [1,2,3,4,...]

**Loading Capabilities** – each unit segment can be described as having many loading capabilities. Each loading capability is identified in a location. Multiple capabilities can be defined for a unit such as container combinations and trailer combinations.

Elements: LC Allowable Locations for HAZMAT, LC Allowable Lower Load Widths, LC Container Load Limit Restrictions, LC Flat Rack Capable, LC Intermodal Equipment Type, LC Load Height Combinations, LC Load Length Combinations, LC Location, LC Notes

Location IDs (Capability IDs): [100,101,102,103,...]

Diagram of Components on a 2-Unit Drawbar Connected Intermodal Flat.

# **Appendix L: Umler Data Transfer Procedures**

Requests for the transfer of a unit data from a specific reporting mark and/or number to a new mark or number will be processed under the following guidelines.

- 1. Request for transfers must be received by 5:00 p. m. Eastern Time on the 25th day of the month to be processed prior to the first day of the subsequent month in order to be included in the CHARM file.
- 2. Letters from both parties authorizing the transfer or copy of the bill of sale or copy of an executed Form 88-C must be filed.
- 3. All requests must be submitted via email to: <a href="mailto:csc@railinc.com">csc@railinc.com</a> advising: (a) Owner's Mark, (b) Lessee's Mark (if applicable), (c) Rate Indicator, (d) A.E.I. Transponder Code, (e) Name of Contact, Company, address, telephone, and email to be invoiced, (d) "Subject: From Mark: \_\_ \_\_ \_ \_ \_ \_ To Mark: \_\_ \_ \_ \_ \_ ".
- 4. The list of cars should be in the following s an attachment to the email. The file must be in Excel (.xls) or Text (.txt). For example, the Excel format will be four columns A-D with data elements prior initial, number and new initial, number.
- Requests for transfers will be time stamped and if not approved by the second party within ten (10) working days, the request will be considered null and void.
- 6. Each request for transfer will be assessed \$150.00 for the transfer of 1-25 units and \$1.50 per car for each additional car. These charges may be subject to change on thirty (30) days notice.
- 7. The deletion of cars is the responsibility of the owner/agent that authorized the transfer. Caution should be exercised to ensure that the cars being transferred have been stenciled to their new reporting marks.

**Note:** The email address for transfers is <u>csc@railinc.com</u>.

# **Appendix M: Umler Exception Control File**

## M.1 Exception Registration Process

Procedures for registering equipment with weights and/or dimensions outside the normal Umler edits in the Umler Exception Control File.

- 1. Owner must email <a href="mailto:csc@railinc.com">csc@railinc.com</a> a request listing the car initials and numbers and the specific dimensions for applicable fields outside the Umler edit parameters. Exception records must be submitted to Railinc at least 5 working days prior to reporting of the of Umler records.
- 2. Unit does not have to be on the Umler file prior to being reported to the Umler Exception Control File and as many exception fields as necessary may be reported per car.
- 3. Owners may request a list of their equipment in the Umler Exception Control File.

# M.2 Railinc Exception Processing

Railinc will process the record as follows:

- 1. Railinc will key the data and construct an Umler Exception Control Record.
- 2. Data on an Umler transaction that does not match the data in the Umler Exception Control File will have the normal edits applied and Umler record will be flagged in error.
- 3. An Umler transaction for equipment that is outside the edit parameters that matches the Umler Exception Control File will be accepted as a valid record.
- 4. If a unit with an exception record is deleted from the Umler file, Railinc will automatically delete the Umler Exception Control record

**Note:** In addition to weight and dimension information, other data elements may be eligible for reporting to the Exception Control File.

# Appendix N: Major Tank Class & Validation Matrices for DOT117, HM-246

Major Classes of Tank Cars AAR and DOT or ICC Container Specifications

01 Major Class (ICC or DOT) - ALUMINUM, NON-PRESSURE CARS 01 Major Class (ICC or DOT) - ALUMINUM, NON-PRESSURE CARS 111A100ALW1, 111A100ALW2, 111360ALW1, 111360ALW2, 111S100ALW1, 111S100ALW2, 111360ALW1, 111360ALW2, 111S100ALW1, 111S100ALW2, 111360ALW1, 111360ALW2 02 Major Class (ICC or DOT) - HIGH PURITY ALUMINUM, NON-PRESSURE CARS 05 Major Class (ICC or DOT) - NICKEL CARS 05 Major Class (ICC or DOT) - NICKEL CARS, WELDED OR RIVETED 05 Major Class (ICC or DOT) - ACID CARS, WELDED OR RIVETED 11A100W2, 111A100W5, 111A60W2 06 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430) 211A100W6 06 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430) 111A100W6, 111A60W6, 111A60W7 07 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304) 111A100W6, 111A60W6, 111A60W7, 1201200W 08 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304) 111A100W6 09 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316) 111A100W6 09 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316) 111A100W6, 111A60W7, 1115100W6 10 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316) 111A100W6, 111A60W7, 1115100W6 10 Major Class (ICC or DOT) - STAINLESS STEEL CARS — CARBON STEEL TANK (WELDED OR RIVETED)(Includes Rubber Lined) 203, 203W, 211A100W1, 211A60W1, 211J100W1 11 Major Class (ICC or DOT) - GENERAL SERVICE CARS — CARBON STEEL TANK (WELDED OR RIVETED)(Includes Rubber Lined) 11A100W1, 111A100W3, 111A100W3, 111A100W1, 111A100W2, 111A100W1, 111A100W2, 111A100W2, 111A100W2, 111A100W2, 111A100W2, 111A1100W2, 111A1100W2, 111A100W2, 111A100W2, 111A100W2, 111A1100W2, 111A1100W2, 111A1100W	·
111A100ALW1, 111A100ALW2, 111A50ALW1, 111A50ALW2  11A1500ALW1, 111SOALW2, 111A50ALW2  10 Major Class (ICC or DOT) - HIGH PURITY ALUMINUM, NON-PRESSURE CARS  05 Major Class (ICC or DOT) - NICKEL CARS  05 Major Class (ICC or DOT) - ACID CARS, WELDED OR RIVETED  11A100W2, 111A100W5, 111A60W2  06 Major Class (AR) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430)  21A100W6  06 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430)  21A100W6  06 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430)  11A100W6, 111A60W6, 111A60W7  07 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304)  11A100W6, 111A60W6, 111A60W7, 1201200W  08 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304)  11A100W6  09 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316)  11A100W6  10 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316)  10 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316)  10 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316)  10 Major Class (ICC or DOT) - STAINLESS STEEL CARS — CARBON STEEL TANK (WELDED OR RIVETED) (Includes Rubber Lined)  203, 203W, 211A100W1, 211A60W1, 211J100W1  10 Major Class (ICC or DOT) - GENERAL SERVICE CARS — CARBON STEEL TANK (WELDED OR RIVETED) (Includes Rubber Lined)  11 Major Class (ICC or DOT) - GENERAL SERVICE CARS — CARBON STEEL TANK (WELDED OR RIVETED) (Includes Rubber Lined)  11 Major Class (ICC or DOT) - GENERAL SERVICE CARS — CARBON STEEL TANK (INCREDED OR RIVETED) (INCREDED STAINLESS STEEL INNER TANK WITHIN A TANK (CARBON STEEL INNER TANK)  11 Major Class (CC or DOT) - GENERAL SERVICE CARS — CARBON STEEL TANK WITHIN A TANK (GRADE 304 or 430 STAINLESS STEEL INNER TANK WITHIN A TANK (GRADE 304 or 430 STAINLESS STEEL INNER TANK WITHIN A TANK (GRADE 304 or 430 STAINLESS STEEL INNER TANK)  11 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK)  11 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHI	
1115100ALW1, 1115100ALW2, 111560ALW1, 111560ALW2 20 Major Class (ICC or DOT) - HIGH PURITY ALUMINUM, NON-PRESSURE CARS  04 Major Class (ICC or DOT) - NICKEL CARS 05 Major Class (ARR) - ACID CARS, WELDED OR RIVETED 111A100W2, 111A100W2  06 Major Class (ARR) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430) 211A100W6  06 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430) 111A100W6, 111A60W6, 111A60W7  07 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304) 111A100W6, 111A60W6, 111A60W7, 1201200W  08 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304) 111A100W6, 111A60W6, 111A60W7, 1201200W  08 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316) 111A100W6, 111A60W7, 1115100W6  09 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316) 111A100W6, 111A60W7, 1115100W6 10 Major Class (ARR) - GENERAL SERVICE CARS—CARBON STEEL TANK (WELDED OR RIVETED)(Includes Rubber Lined) 203, 203W, 211A100W1, 211A60W1, 211J100W1 10 Major Class (ICC or DOT) - GENERAL SERVICE CARS—CARBON STEEL TANK (WELDED OR RIVETED)(Includes Rubber Lined) 111A100W1, 111A100W3, 111A100W1, 111A100W1, 111A100W1, 111A10W1, 111A10W3, 111A	
22 Major Class (ICC or DOT) - NIGH PURITY ALUMINUM, NON-PRESSURE CARS  05 Major Class (ICC or DOT) - NICKEL CARS  05 Major Class (ICC or DOT) - ACID CARS, WELDED OR RIVETED  111A100W2, 111A100W5, 111A60W2  06 Major Class (ARC) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430)  211A100W6  06 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430)  111A100W6, 111A60W6, 111A60W7  07 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430)  111A100W6, 111A60W6, 111A60W7, 1201200W  08 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304), 11A100W6, 111A60W7, 11D160W7, 1201200W  08 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316), 11A100W6  111A100W6, 111A60W7, 111S100W6  10 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316), 11A100W6, 111A60W7, 111S100W6  10 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316), 11A100W6, 111A60W7, 111S100W6  11 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316), 11A100W6, 111A60W7, 111A100W1, 111A00W1, 11A00W1, 11A00W1, 11A00W1, 11A00W1, 11A00W3, 11A00W4, 11A60W1  11 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (CARBON STEEL INNER TANK)  206W  13 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 304 or 430 STAINLESS STEEL INNER TANK WITHIN A TANK (GRADE 304 or 430 STAINLESS STEEL INNER TANK WITHIN A TANK (GRADE 304 or 430 STAINLESS STEEL INNER TANK)  206W  14 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 304 STAINLESS STEEL INNER TANK)  115A60W6  15 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK)  115A60W6  16 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK)  115A60W6  17 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK)  115A60W6  10 Major Class (I	111S100ALW1, 111S100ALW2, 111S60ALW1, 111S60ALW2
03 Major Class (ICC or DOT) - NICKEL CARS 05 Major Class (ICC or DOT) - ACID CARS, WELDED OR RIVETED 05 Major Class (ICC or DOT) - ACID CARS, WELDED OR RIVETED 111A100W2, 111A100W5, 111A60W2 06 Major Class (ARC) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430) 211A100W6 06 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430) 111A100W6, 111A60W6, 111A60W7 07 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304) 111A100W6, 111A60W6, 111A60W7, 1201200W 08 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316) 111A100W6, 111A60W7, 111S100W6 09 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316) 111A100W6, 111A60W7, 111S100W6 10 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316) 111A100W6, 111A60W7, 111S100W6 10 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316) 111A100W6, 111A60W7, 111S100W6 10 Major Class (ICC or DOT) - GENERAL SERVICE CARS—CARBON STEEL TANK (WELDED OR RIVETED)(Includes Rubber Lined) 203, 203W, 211A100W1, 211A60W1, 211J100W1 10 Major Class (ICC or DOT) - GENERAL SERVICE CARS—CARBON STEEL TANK (WELDED OR RIVETED)(Includes Rubber Lined) 111A100W1, 111A100W3, 111A100W4, 111A60W1 111 Major Class (ARC) - NON-PRESSURE TANK WITHIN A TANK (CARBON STEEL INNER TANK) 206W 11 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 304 or 430 STAINLESS STEEL INNER TANK) 115A60W6 13 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 304 STAINLESS STEEL INNER TANK) 115A60W6 14 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK) 115A60W6 15 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK) 115A60W6 16 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK) 115A60W6 17 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK) 115A60W6 17 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 31	02 Major Class (ICC or DOT) - HIGH PURITY ALUMINUM, NON-PRESSURE
05 Major Class (ICC or DOT) - ACID CARS, WELDED OR RIVETED 111A100W2, 111A100W5, 111A60W2 06 Major Class (AAR) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430) 211A100W6 06 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430) 111A100W6, 111A60W6, 111A60W7 07 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304L) 111A100W6, 111A60W6, 111A60W7, 1201200W 08 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316L) 111A100W6 09 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316L) 111A100W6, 111A60W7, 111S100W6 10 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316L) 111A100W6, 111A60W7, 111S100W6 10 Major Class (ICC or DOT) - GRADE STEEL CARS (STAINLESS GRADE 316L) 111A100W6, 111A60W7, 111S100W6 10 Major Class (ICC or DOT) - GENERAL SERVICE CARS—CARBON STEEL TANK (WELDED OR RIVETED)(Includes Rubber Lined) 203, 203W, 211A100W1, 211A60W1, 211J100W1 10 Major Class (ICC Or DOT) - GENERAL SERVICE CARS—CARBON STEEL TANK (WELDED OR RIVETED)(Includes Rubber Lined) 111A100W1, 111A100W3, 111A100W4, 111A60W1 11 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (CARBON STEEL INNER TANK) 206W 11 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 304 or 430 STAINLESS STEEL INNER TANK) 115A60W1 13 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 304 STAINLESS STEEL INNER TANK) 115A60W6 14 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 304 STAINLESS STEEL INNER TANK) 115A60W6 15 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK) 115A60W6 16 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK) 115A60W6 17 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK) 115A60W6 18 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK) 115A60W6 16 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STA	04 Major Class (ICC or DOT) - NICKEL CARS
111A100W2, 111A100W5, 111A60W2  06 Major Class (AAR) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430)  111A100W6  06 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430)  111A100W6, 111A60W6, 111A60W7  07 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304L)  111A100W6, 111A60W6, 111A60W7, 1201200W  08 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316L)  111A100W6  09 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316L)  111A100W6, 111A60W7, 111S100W6  10 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316L)  111A100W6, 111A60W7, 111S100W6  10 Major Class (ARP) - GENERAL SERVICE CARS—CARBON STEEL TANK (WELDED OR RIVETED)(Includes Rubber Lined)  110 Major Class (ICC or DOT) - GENERAL SERVICE CARS—CARBON STEEL TANK (WELDED OR RIVETED)(Includes Rubber Lined)  111A100W1, 111A100W1, 211A60W1, 211J160W1  10 Major Class (ICC or DOT) - GENERAL SERVICE CARS—CARBON STEEL TANK (WELDED OR RIVETED)(Includes Rubber Lined)  111A100W1, 111A100W3, 111A100W4, 111A60W1  11 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (CARBON STEEL INNER TANK)  206W  11 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 304 or 430 STAINLESS STEEL INNER TANK)  115A60W1  13 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 304 or 430 STAINLESS STEEL INNER TANK)  206W  14 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 304L STAINLESS STEEL INNER TANK)  115A60W6  15 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316L STAINLESS STEEL INNER TANK)  115A60W6  16 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316L STAINLESS STEEL INNER TANK)  115A60W6  16 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316L STAINLESS STEEL INNER TANK)  115A60W6  16 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316L STAINLESS STEEL INNER TANK)  115A60W6  16 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316L STAINLESS STEE	
06 Major Class (AAR) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430) 211A100W6 06 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304 or 430) 111A100W6, 111A60W6, 111A60W7 07 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 304L) 111A100W6, 111A60W6, 111A60W7, 1201200W 08 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316) 111A100W6 09 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316) 111A100W6, 111A60W7, 111S100W6 10 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316L) 111A100W6, 111A60W7, 111S100W6 10 Major Class (ICC or DOT) - STAINLESS STEEL CARS (STAINLESS GRADE 316L) 111A100W6, 111A60W7, 111S100W6 10 Major Class (ICC or DOT) - GENERAL SERVICE CARS—CARBON STEEL TANK (WELDED OR RIVETED)(Includes Rubber Lined) 203, 203W, 211A100W1, 211A60W1, 211J100W1 10 Major Class (ICC or DOT) - GENERAL SERVICE CARS—CARBON STEEL TANK (WELDED OR RIVETED)(Includes Rubber Lined) 111A100W1, 111A100W3, 111A100W4, 111A60W1 11 Major Class (ARD) - NON-PRESSURE TANK WITHIN A TANK (CARBON STEEL INNER TANK) 206W 11 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 304 or 430 STAINLESS STEEL INNER TANK) 115A60W6 14 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 304 or 430 STAINLESS STEEL INNER TANK) 115A60W6 14 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 304 STAINLESS STEEL INNER TANK) 115A60W6 15 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK) 115A60W6 16 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK) 115A60W6 16 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK) 115A60W6 16 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK) 115A60W6 16 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN A TANK (GRADE 316 STAINLESS STEEL INNER TANK) 115A60W6 16 Major Class (ICC or DOT) - NON-PRESSURE TANK WITHIN	05 Major Class (ICC or DOT) - ACID CARS, WELDED OR RIVETED

#### **Reporting Rail Car and Superstructure Cost** Appendix O:

#### **Overview of Application of Cost Information** 0.1

- 1. The railcar and superstructure cost data reported to Umler is used in several industry applications. The Damaged & Defective Car Tracking (DDCT) system provides damaging carriers with preliminary car values based on the cost data in the Umler file.
- 2. Private tank car and covered hopper car rates in Freight Tariff RIC 6007 are calculated using the age and cost elements for this equipment.
- 3. Appurtenance rates (Appendix S, AAR Circular OT-10) for superstructures mounted on flat cars are calculated using the age and cost elements.

It is critical that the original cost, rebuilt cost and additions/betterments costs are correctly reported.

#### 0.2 General guidelines apply to all car and superstructure costs registered in the Umler file

- 1. The costs must be capitalized (not expensed) costs. AAR auditors will verify that the costs are capitalized costs.
- 2. All cost data should be in U. S. dollars. The conversion of foreign currency to U. S. dollars is not required for cars built prior to 1978. Additions/betterments applied in 1978 and subsequent must be converted to U.S. dollars.
- 3. The reporting mark of the car (railroad or private) at time a car is built or addition/betterment is applied will determine whether the rules under Section III or IV applies.

#### 0.3 Railroad Marked Cars

The original cost may include the following:

1. Capitalized cost in U. S. Dollars Supported by the manufacturer's invoice to the original buyer or in the case of a manufacturer-lessor, the fair market value or the value, which was certified,

or would have been certified for investment tax credit purposes.

Plus initial into Service Transportation If capitalized Plus additions done prior to service If capitalized Plus inspection costs If capitalized

2. Additions are capitalized costs of new components applied after the car was built/rebuilt.

Betterments are capitalized costs of improvements to components of existing equipment that extend the life of the car or increase the utility of the car. Betterments shall include the following.

- a. Capitalized cost in U. S. Dollars
- b. Minus current replacement costs of the previous component. If that component is registered as an addition in Umler, that addition should be deleted from Umler during the process of reporting the new costs for Umler.
- c. Minus labor costs to remove the previous component
- d. Minus labor to apply the new component

Examples of Betterment Cost Calculation:

Convert tie-downs on vehicular rack cars from chains and ratchets to a chock system.

\$7,500 Invoice from shop applying chocks to a bi-level rack

-\$1,600 Estimated value of the old tie-downs at current replacement price and labor costs related to the removal

of the previous components and application of the new component

\$5,900 Net betterment amount

Replace an epoxy lining in a covered hopper car with a rubber lining.

\$14,000 Invoice from shop applying the new lining

-\$4,000 Estimated current replacement cost of prior lining

-\$300 Labor costs to remove the previous lining -\$500 Labor costs to apply the new lining

-\$500 Labor costs to apply the new lining \$9,200 Net betterment amount

If the prior lining was part of the original cost of the car, report the net betterment of \$9,200 in Umler. If the prior lining was registered as an addition in Umler (i.e., \$3,500), that addition should be deleted from Umler and a net of \$12,700 should be reported in Umler. The combination would result in a \$9,200 net change to Umler.

## O.4 Private Marked Cars (Covered by Tariff 6007)

The original cost may include the following.

1. Capitalized cost in U. S. Dollars Supported by the manufacturer's invoice to the original buyer or in

the case of a manufacturer-lessor, the fair market value or the value, which was certified, or would have been certified for investment tax

credit purposes. (See RIC 6007, Items 195 and 621)

a. Plus initial into service transportation 
Either capitalized or non-capitalized

b. Plus additions done prior to service

c. Plus capitalized inspection costs Allowed only for tank cars built in 1988 and later

2. Additions are capitalized costs of new components applied after the car was built/rebuilt.

- 3. Betterments are capitalized costs of improvements to components of existing equipment that extend the life of the car or increase the utility of the car. Betterments must include the following.
  - a. Capitalized cost in U. S. Dollars
  - b. Minus original costs of previous component. If that component is registered as an addition in Umler, that addition should be deleted from Umler during the process of reporting the new costs for Umler.
  - c. Minus labor costs to remove the previous component

Example of Betterment Cost Calculation:

Replace an epoxy lining in a tank car with a rubber lining.

\$14,000 Invoice from shop applying the new lining
-\$3,500 Estimated value of the original lining)
-\$300 Labor costs to remove the previous lining

\$10,200 Net Betterment Amount

Note: The cost of the new lining must be capitalized and not expensed.

If the prior lining was part of the original cost of the car, just report the net betterment of \$10,200 in Umler. If the prior lining was registered as an addition in Umler (\$3,500), that addition should be deleted from Umler and a net of \$13,700 be reported in Umler. The combination would result in a \$10,200 net change to Umler.

# O.5 Rebuilt Cars (Railroad Marked or Private Marked Cars) and Superstructures

- 1. The rebuilt cost should be reported in the Original Cost and Ledger Value fields in Umler.
- 2. Prior additions and betterments are eliminated.
- 3. The maximum valuation of a rebuilt private car shall not exceed the lesser of:
  - a. 75% of the original cost of a comparable new car
  - b. 75% of the calculated replacement cost of the rebuilt car prior to rebuilding, as computed per AAR Interchange Rule 107.

\*=Conditionally Mandatory

4. AAR Interchange Rule 88 governs the rebuilding of freight cars and superstructures. The value registered in Umler may include the following.

a. Capitalized rebuilding costs Original costs and additions and betterments must be written down to

the depreciated value subject to a 10% floor as outlined in AAR Interchange

Rule 107.

b. Plus Reused Parts Depreciation must be calculated from the month-year built to the month-year

rebuilt. Additions and betterments must be depreciated from the month-year the car or superstructures is built - not month-year installed on the car or

superstructure.

Any labor to remove components from a unit, either temporarily, or c. Minus stripping labor costs

permanently, should be computed.

d. Minus material credits Any scrap credits or major components not reused and not reflected in the net

invoice price of a rebuilt car/superstructure should be computed. If such components are reused, then the secondhand price, before refurbishment should be used. If the components are scrapped, a scrap value must be calculated. This may be done by calculating the original cost of these components and depreciating them down, using the same calculations in 4.b above. If the original costs of the components are not known, one can take the current cost, and adjust it back to an approximation of the original cost, using Rule 107 cost factors, before depreciating it. See Example No. 1.

### 0.6 When refrigeration units are rebuilt or replaced, the value registered in Umler may include the following

- 1. Rebuilt refrigeration units
  - a. Capitalized rebuilding costs
  - b. Plus reused parts
  - c. Minus material credits
  - d. The prior refrigeration unit costs registered in Umler should be deleted from Umler.

For example:

Capitalized rebuilding costs \$7,500

Plus reused parts + 500

Minus material credits - 300

Net capitalized rebuilding costs \$6,700

Prior unit cost deleted from Umler -4,000

The cost of the prior refrigeration unit would be deleted from Umler (\$4,000), and the new rebuilt net of \$6,700 would be reported in Umler, resulting in a net change of \$2,700.

- 2. Replaced refrigeration units
  - a. Capitalized cost in U. S. Dollars
  - b. Minus current replacement costs of the previous unit
  - c. Minus labor costs to remove the previous unit
  - d. Minus labor to apply the new unit

For example:

Capitalized replacement costs \$10,000

Minus current replacement costs of the previous unit - 5,000

= Affects Rating

Minus labor costs to remove the previous unit - 700

Minus labor to apply the new unit - 600

Net capitalized replacement costs \$3,700

The cost of the prior refrigeration unit would be deleted from Umler (\$4,000), and the new net of \$7,700 would be reported in Umler, resulting in a net change of \$3,700.

#### **Appendix P: Identical Tare Weight Batch Process**

Appendix P is the Umler Committee's (UC) summary of the automated method and detail for flagging cars in Umler with identical Tare Weights as well as ways for stencil mark owners to resolve the conflicts. The following is a summary of UC's solution and is split into three main parts:

- 1) A new Business Rule was added that flags cars in conflict when Status Code (USCT) is "A", Status Change Date (USCT) is 30 days in the past, and cars have Weighing Status of "A" or "E".
- 2) Modification to data element Weighing Status (A289) as follows:
  - In addition to the 2 already existing permissible values of "A Actual" and "E Estimated", an addition of two new permissible values were introduced:
    - X = Tare Weight subject to verification (NEW VALUE-SYSTEM GENERATED)
    - **V**= Verified correct tare weight (NEW VALUE)
- 3) A batch process has been created in Umler to run on the 15th of each month to place into conflict cars that meet all of the following characteristics:
  - 10 or more numerically sequential stencil marks with identical Tare Weights
  - Status is Active (Keep in mind, if added as Active, Owner is forgoing their 30-day window outside of the batch process)
  - Built/Rebuilt Date is on or after April 9, 2015. For all cars built within the last several years, weight paperwork should be readily available from the builder.
  - No cars in the series of 10 have a Weighing Status of "V-Verified correct tare weight"
  - Status Change Date (USCT) is 30 days in the past (i.e., a car meeting the conditions in the other bullets points will not go into conflict until at least 30 days after Status Change Date)
  - Cars put into conflict will have Weighing Status (A289) of "X" (Tare Weight subject to verification) applied to car.

### Examples

The following example shows 20 consecutive Boxcars with identical Tare Weights. An initial run of the batch process would put all of them into conflict, as it should:

Equipment ID	Tare Weight	<b>Result of Batch Process</b>
RAIL 5001	89300	Conflict
RAIL 5002	89300	Conflict
RAIL 5003	89300	Conflict
RAIL 5004	89300	Conflict
RAIL 5005	89300	Conflict
RAIL 5006	89300	Conflict
RAIL 5007	89300	Conflict
RAIL 5008	89300	Conflict
RAIL 5009	89300	Conflict
RAIL 5010	89300	Conflict
RAIL 5011	89300	Conflict
RAIL 5012	89300	Conflict
RAIL 5013	89300	Conflict
RAIL 5014	89300	Conflict
RAIL 5015	89300	Conflict
RAIL 5016	89300	Conflict
RAIL 5017	89300	Conflict
RAIL 5018	89300	Conflict
RAIL 5019	89300	Conflict
RAIL 5020	89300	Conflict

\*=Conditionally Mandatory

If the owner subsequently corrects RAIL 5005 and RAIL 5016, Umler would use the change in Tare Weight as a trigger to remove the conflict from those 2 cars. With that done, the results would then look as follows:

Likewise, if the owner validates the tare weights and updates Weighing Status (A289) to "A-Actual", the Tare Weight was verified", Umler would use the change in Weighing Status (A289) to remove the conflicts from cars that were marked as "A-Actual".

		Result of Batch
<b>Equipment ID</b>	Tare Weight	Process

### Changes to Weighing Status (A289) data element

Two new permissible values in the Weighing Status (A289):

A = Actual

**E** = Estimated

**X** = Tare Weight subject to verification (NEW VALUE-SYSTEM GENERATED)

V= Tare Weight Verified (NEW VALUE)

In the scenario above with 10 cars entered with identical tare weight, the batch process would flag all 10 cars in conflict and the Weighing Status (A289) field would be **SYSTEM** updated to "X" for weight verification.

### Scenario #1:

Owner verifies correct weights for all 10 cars and updates Tare Weight (A259), Load Limit (LDLT), and Weighing Status (A289) to "A-Actual". Conflict is removed from all 10 cars.

### Scenario #2:

Owner verifies weights on original release documentation and verifies that all 10 cars have identical tare weight. Owner updates Weighing Status (A289) to "V-Correct Tare Weight Verified" and conflict is removed from car. Cars with Weighing Status of "V" are no longer subject to monthly batch process that looks for identical tare weights.

### Scenario #3:

Owner verifies weights on original release documents and finds that 3 cars out of the 10 need to be corrected. For the three cars, user would follow scenario #1 above, and for remaining 7 cars, scenario #2 above applies. If owner does not follow scenario #2 for the remaining 7 cars, they will remain in conflict.

**- 375 -**

The important thing to remember in the scenarios above is that once a Weighing Status (A289) of "X" is applied to a car, it remains in conflict and not part of the batch process until the stencil mark owner either changes the weight and weighing status to "A", or marks as Tare Weight Verified "V".

This identical tare weight (or weight subject to owner verification) conflict will follow the normal conflict escalation rules already in place.

### Carry Forward Rules on Restencil Transactions

- A = Actual Value carries forward
- E = Estimated Value carries forward
- **X** = Tare Weight Subject to verification **Value does not carry forward**. Existing business rules prevent a restencil transaction if a conflict exists on a car. "X" code would need to be addressed before restencil could occur.
- V = Correct Tare Weight Verified Value carries forward

### **Carry Forward Rules on Clone Transactions**

Existing business rules will still apply in clone transactions. The two new permissible values would not carry forward in a clone transaction.

### Weighing Status (A289) codes subject to batch process

- A = Actual Subject to batch process
- E = Estimated Not subject to batch process
- X = Tare Weight subject to verification Not subject to batch process
- V = Correct Tare Weight Verified Not subject to batch process
